## As The Editor Sees It

**H**APPY NEW YEAR! The time worn phase, spoken so often thoughtlessly, is fraught with meaning for us in America this year. We need only to consider the chaos in Europe today—Anarchy, Bolshevism, Poverty, Hunger—to realize that for us, of all people, the New Year holds out the potentiality of happiness and contentment and plenty. Elbert H. Gary, chairman, United States Steel Corporation, sounds a very encouraging note in *System* when he answered the question, "What's Ahead for Business in 1924?" Summing up his discussion Mr. Gary says "the tide of prosperity in the United States cannot easily be restrained. Do not treat transient hindrances as if they were permanent, immovable obstacles which we can neither go around nor go over. The outlook is good—1924 should be a better year than 1923. There will be success for those who proceed with good judgment and prudence, extending and progressing carefully within the limits of their resources."

Herbert Hoover, Secretary of Commerce, with his usual clear vision, throws light on present conditions in "Economic Prospects of 1924" and gives interesting and timely data when he writes:

The important thing in formulating any judgment as to the economic future is an understanding of our present position and of the forces that are in motion for and against economic progress. The following summary is based on the annual

review by the Department representatives throughout the world.

The economic outlook for our own country for the next year is bright. In general the world situation is hopeful. The general spirit of prudence, the absence of speculation, complete employment, high production, and the great financial strength and stability of the important states in the Western Hemisphere, together with the promise of the early conference for systematic consideration of constructive solution of the world's greatest economic menace—Franco-German relations—all create a hopeful foundation on which the New Year may build.

An economic weather chart of the world would show three distinct areas.

First, the Western Hemisphere, Asia, Australia, and Africa, which have made distinct economic progress during the past year, achieving a high degree of economic recovery.

Second, Russia, the Baltic, the Balkan States, the Near East, Italy and Spain, which are still struggling with afterwar political, social, currency, debt, and budget problems but yet show undoubted progress in the restoration of commerce and industry.

Third, an area of economic depression resulting from the occupation of the Ruhr and the collapse in Germany. While most acute in that country it radiates its depressing influences strongly over Poland, Czechoslovakia, Switzerland, Hungary, Scandinavia, Holland and Great

Britain. France can well be placed in this group because the failure to secure reparations has contributed to an unbalanced budget and the resulting indirect inflation. This has concealed the true situation and has given an artificial and forced draught to the industrial activity. The other countries of the group are suffering from a distressing increase of unemployment.

The German collapse has in less degree affected every other part of the world. The decreased consuming power of Germany and of the states most affected has contributed to the low price levels of food products in the United States and other food exporting countries. The decrease in her steel and coal production at first gave some stimulus to the production of other countries, but this is now offset by decreased buying power of the depressed area for other commodities. One other effect of importance has been the undoubted substantial flight of capital from many of the states in this area of depression to the United States, resulting in further excessive accumulation of gold here. The economic world has not yet felt the full impact of the occupation of the Ruhr. Were it not for the hope inspired by the initiation of negotiations for settlement of the German problem the situation would be most unpromising for the future.

Even with settlement accomplished there will arise considerable problems in readjustment of trade through re-entry

PRINTS**

of German coal and steel into the markets and through the possible (and to be hoped) return of capital which has sought refuge in the United States from many parts of Europe. During the whole year past the events of the depression area have at least served to inspire caution in the rest of the world and has contributed to the absence of speculation and therefore, to their fundamental stability. If it be possible to reconstruct Germany's finances during the forthcoming year and to secure such assistance to France as will enable the stabilization of the franc, the world will have entered into a period of great hope and much promise of prosperity. Full consummation cannot, of course, be accomplished without a large measure of disarmament in Europe, for the armies today maintained by 170 million people there, are upon a scale which if repeated in the Western Hemisphere, would mean 3,000,000 men under arms—a strain that would have made recuperation almost impossible on this side of the Atlantic, even with the economic strength which this Hemisphere possesses.

Russia is slowly making progress with the inch by inch abandonment of communism and socialism. War has ceased in the Near East. Greece and Turkey are turned toward progress. The eastern states of Europe are sensibly approaching sound projects for stabilization of budgets and currency. China is still disturbed politically, but her commerce is maintained despite of it. The Japanese disaster has had less effect upon her economic stability than many anticipated and has furnished new proof of the great strength and courage of that country. Latin America is steadily increasing in productivity but currency conditions in some instances leave much to be desired. Except in Mexico there has been a steady increase in political and social stability.

Our own country has shown more freedom from depressing European economic influences than most others. The explanation lies in the fact that although our exports are of profound importance, less than six per cent of our total productivity is exported and of this only about one-half to Europe. The proportion of different products exported to Europe of course varies and European conditions, therefore, have a fluctuating influence upon different industries. As less than one per cent. of our manufactured products find their market in Europe the direct effect upon these industries is more negligible than upon certain agricultural products which are much more dependent upon European consumption, such as wheat and pork products, and we endure both economic and political reactions at home from this latter fact.

In 1923 the United States have witnessed the highest total productivity and

movement of commodities since the war, with full employment, high real wages, great increased savings, large additions to home building, and the largest increase in railway equipment since the war. The whole has been accompanied by a remarkable absence of speculation, consequent over-accumulation of consumable goods, or dangerous expansion of credit. As we are not in a boom we can expect freedom from a slump. Some secondary interrogations can be raised as to the effect of the expansion of installment buying of consumable goods, the acute suffering in the Northwest agricultural areas, the increase on stocks of some commodities, and decrease on some advance orders. These items are small compared to the whole industrial fabric. Taking the country as a whole we never in history have enjoyed a higher standard of living and comfort nor so great a degree of commercial and industrial efficiency as today or so wide an understanding of the forces which control the ebb and flow of business. As severe as the situation is in the worst of the agricultural states yet the disparity between agricultural prices as a whole and industrial commodities is gradually lessening and the economic balance is tending to right itself.

A more detailed examination of our own situation based upon the first eleven months, and some later data, indicates that our foreign trade will show about \$4,100,000,000 in exports and about \$3,800,000,000 in imports—an increase of seven per cent. in the former and twenty per cent. in the latter over 1922. The merchandise balance will be about \$300,000,000 in our favor. Net gold and silver imports will be about \$260,000,000 or on the face of these figures almost a full liquidation of the trade balance. On the other hand, our very large net expenditure upon tourists, emigrant remittances, and other current invisible items have been apparently liquidated by the very considerable flight of capital from Europe. Our publicly issued loans to foreign countries and enterprises have been about \$300,000,000 net for the year as compared to over \$600,000,000 last year.

Our manufactured production taken together will show about ten percent. higher than 1920 and fifteen per cent higher than 1922. The 1923 production of coal and coke shows a great increase, but the strike in 1922 prevents any useful comparison with last year. Production for this year increased over 1922 by about forty per cent. in iron and steel, about fifty per cent in copper, about sixty per cent in automobiles, about fifteen per cent. in rubber tires, about ten per cent. in lumber, about twenty per cent. in cement, about twenty per cent. in sanitary ware and about ten per cent. in leather. Textiles

You know what propaganda is, don't you? You know, too, how effective a weapon it is, if used properly, don't you? Well, advertising—honest, fair advertising—is the best propaganda we know of. Join the propagandists now! Advertise in the "Builders' Guide."

## Proposals

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., Dec. 20, 1923. Sealed Proposals will be opened in this office at 3 P. M., Jan. 21, 1924, for the construction, including mechanical equipment, of a one-story brick and tile non-fireproof Post Office building, approximately 62 by 64 feet in size, at State College, Pa. Drawings and specifications may be obtained from the Custodian of the site at State College, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from page 4)

were about the same as the year before.

In the agricultural products cotton production increased about three per cent.; the total bushels of cereals show an increase of about three per cent.; pork products about twenty per cent.; beef about five per cent.—with a slight increase in dairy produce.

In construction work the large additions to our railway equipment have enabled the railways to fully handle the traffic for the first time since the war, and marks a great achievement. In building there has been about the same floor space constructed but there has been a great shift from public construction to make way for private work, as indicated by the decline of over twenty per cent. in public building construction, and an increase of about fifteen per cent. in residential buildings compared to 1922. This shift from public to private construction is also indicated by the fact that concrete road contracts delined about sixteen per cent. while the output of cement, however, increase as above.

In transportation, car loadings were increased by about fifteen per cent. Cargo traffic through the Panama Canal doubled, it increased forty per cent. in through Sault Ste. Marie and thirty per cent. through the Erie Canal. The overseas tonnage was about the same.

Consumption is indicated by the in-

crease in sales of mail order houses by about thirty per cent., in chain stores eighteen per cent., and department stores about ten per cent. over 1922. Postal receipts were ten per cent. over 1922.

The stocks of goods generally at the end of this year are somewhat higher than at the beginning of the year and unfilled orders for steel are lower, as are orders for railway equipment. But the large employment bids fair for large continued consumption of goods.

Price levels maintained comparative stability. Wholesale average prices of all commodities declined about three per cent. for the year and stand fifty-two per cent. above 1913. Average prices for ground crops increased fifteen per cent. while live stock declined about seven per cent. Retail food prices increased during the year about four per cent. and the Labor Department Cost of Living Index would show an increase of about four per cent.

The national debt has been reduced about one billion dollars during the year: bank debits to individual accounts remained about the same in New York but increased about twelve per cent. in the rest of the country. The money in circulation apparently increased about six per cent. Member banks show an increase of about six per cent. in loans and discounts. The reserve ratio is about the same as a year ago, that is about seventy-six per cent. Savings increased about ten per cent. and life insurance sales about twenty-two per cent. The financial items, therefore, show a general parallel with increased production without inflation.

In summary, the world situation continues under the European cloud of the reparations dispute, unbalanced budgets, unstable currencies, and the political uncertainties of armies in the old allied states greater than pre war. Yet the realization of the necessity of constructive solution of reparations, the construc-

tive aid to Austria and Hungary, and the projects for budget reorganization in other countries, all give hope that we have at last taken a turning.

Our own country has exhibited extraordinary strength and progress. The basis of healthy business activity lies in balanced budgets, stable currency, high production accompanied by proportionate consumption and savings with an absence of speculation, extravagance, and inflation. These things we have in the United States. We have even more in the hope of decreasing taxes. The odds are favorable to 1924.

**APPRENTICESHIP—FOR WHAT?**

*Being a Discussion of Specialization,  
Winding Up with a Story About a  
Ruined Chameleon*

**BY FRANCIS MAHONEY****Trade Analyst, New York Building  
Congress**

"I see be the papurs and magazines," quoth Mr. Dooley, "a great deal of talk about apprintices."

"What," said Mr. Hennessey, "is an apprintice, Mr. Dooley?"

Drawing a long pull on his ever-faithful pipe, Mr. Dooley unloaded himself of the following:

"An apprintice, Mr. Hennessey, is something that someone at some time thinks that he is and that he finds at a later time he is not."

And so the problem comes down to those of us who are interested in the building trades particularly, for as the wise sage from out of the pen of Peter Finley Doone has said: "Are we not laboring under the delusion that we are creating something which we later find we are or have not created?"

There was never a greater need than at the present time to look to the progress rather than to the process. And the process in apprenticeship is something to marvel at.

*Variety of Efforts*

The past twenty or more years have been replete with programs and processes aiming at the solution of the problem of creating an adequate supply of competent journeymen.

Yet at the end of this period we find ourselves in a worse fix than ever before.

In the opinion of the writer, the fault seems to have been not so much in the efforts expended as in the approach to the solution.

The question may well be asked: "Apprenticeship for What?"

In the opinion of the employer, whose horizon often fails to extend beyond a maximum of profit in a minimum of time, and sometimes without thought of responsibility to a basic craft or its necessary employees, apprenticeship seems to mean but one thing and that is the training of employees in one narrow division of a broader craft, this product to be used for the immediate furtherance of a particular end.

As a result of hundreds of conferences with employees and employers under the auspices of the Apprenticeship Commission of the New York Building Congress, it can safely be said that the number of employers seeking narrowly trained, quantity-producing specialists is becoming scarcer and scarcer.

*Thoroughness of Aim*

Disregarding that ever-present class of so-called speculators whose standard of success seems measured by profits accumulated rather than memorials of craftsmanship in brick and mortar, wood and stone, the construction industry may be said to stand solidly for thoroughness in training and pride in a craft.

There are those who will throw the entire blame at the door of the labor organization, claiming that they set the standard of craftsmanship and that they err in accepting poorly trained mechanics. In justice to them, it must be said that they have had, during the past twenty years, little to choose from; and they had to accept those that came, lowering from time to time their standards to meet the needs of incoming members, narrowly trained to fit into some particular specialty within an otherwise broad craft.

In many of these organizations the trade test—still in vogue in Europe, the training camp of real craftsmen—has had to be sacrificed that members might be admitted, so as to avoid the criticism of unduly restricting the number of men in a trade.

**EDWIN ELLIOT & CO.**

**Hot Water Generators  
Pumps, Grates, Traps  
Steam Specialties**

**1011 Chestnut Street, Phila.**

Disregarding the well-known fact that the past quarter of a century has indicated a decided drifting away from over-all jobs and into white collar jobs, there has developed here in America an efficiency wave, the aim of which is greater production with a decrease in the cost per unit. This movement seems to have established itself permanently.

Undoubtedly this movement has been a success in manufacturing circles and has resulted in America being placed in the forefront in much of its work. As to the success of this movement in such industries as can be standardized, there remains no doubt, but in the construction industry, at least, it is a debatable question. Many a construction contractor will claim there is no debate when he can show that, in spite of the use of specialists, taking into consideration too the increased costs due to wages, his relative costs are higher than they were when all-round trained men were used.

*Of Different Character*

There is no doubt that the construction industry can never be standardized to the degree attained in other lines. Therefore, caution must be exercised before any attempt is made to train men for some narrow specialty that later, through the development of new materials, may cease to exist.

The economic loss due to frequent unemployment of men, trained in one narrow division, who must seek re-employment reflects itself in larger per diem wages, the results of which are only measured in final costs.

A striking example of this loss was noted when recently it was the privilege of the writer to visit a job of considerable size in which wood floors were being laid by specialists in floor laying. Due to a delivery of flooring from out of town being five days overdue, it was necessary to divert the efforts of these men to other lines in order that they be retained for use when the flooring arrived.

In spite of the fact that these men were members of a labor group covering all branches of the woodworking trade, there was but one man among the ten who had the skill or experience sufficient to simply cut and fit base of which there was considerable to be cut and fitted. Naturally the other nine had to be laid off. Some found employment elsewhere; the others drifted back when the flooring arrived.

The slowing down in anticipation of a layoff was readily noticed in the production records even before the layoff occurred. The completed building carried the loss, as does every other job on which conditions of this type develop.

*Many Similar Cases*

This is not an isolated case for within another basic craft—that of the inside

electrical worker—a condition even worse seems to exist, due to no fault, apparently, of either the labor organization or the employers, but rather to an indifference or apathy on the part of both, perhaps because of a feeling of inability to cope with the situation.

Although an apprenticeship of four years in this trade is generally insisted upon, and regardless of the fact that this period, if properly made use of, should provide thorough training in all branches of the trade, it will be found that the majority of the men engaged know little, if anything of other than their specialty on either bells, telephones and signals, or rigid conduit or armored cable or metal molding or open-wire systems or service connections or motors, generators and switchboards.

One can quote similar conditions in each and every one of the construction trades, were there space to permit.

Many will claim that the all-round man is not needed under present conditions, yet that same group, almost to a man, will place a wide range of ability as a requisite for employment. As an example of the adaptability of all-around training to participation in special work, the writer recalls a visit made to one of New York's recently erected skyscrapers, the elevator doors and trim of which were made of bronze, the placing of which was done by the carpenters' and joiners' craft. Of the 17 men engaged on the finer branches of the work, there was but one who had not learned his trade through a full four or six-year apprenticeship and entirely in the wood-working. Each had had a basic training in work at the bench and had been selected for metal trim erection because of his skill in tool using.

#### *One Specific System*

The Apprenticeship Commission of the New York Building Congress, composed, as it is of members from among the employers, employees, architects, investors and the public at large, had all previous trade education efforts in mind when it began its work on apprenticeship. It has set up a system of trade extension training which shall be conducted during four or more evening hours a week for the duration of the apprentice period. Some of the trades have under consideration the granting of four hours a week during the day time to their apprentices in order to make the instruction more attractive.

During these four hours only such work as has been proven basic by investigation and laid out in a course of study by the Commission and which covers all of the practical and theoretical work possible will be attempted. In no case will specializing be allowed, although an apprentice may get assistance in his division or specialty.

A broad basic training is to be insisted upon. This idea has been borrowed from

the experiences of those trade extension schools in Europe that have developed such thorough craftsmen.

The first year's work for the electrician, dealing as it does with the basic elements in bells, telephone annunciator, telegraph and other signaling devices, is typical of the approach to all-roundedness in training for that and other trades.

The carpenter does not confine himself to bench work alone, but undertakes framing, stair building, trimming and concrete work also. As far as possible, there is tool practice on projects in the school, but where such cannot be the case, drawing and other related work takes its place.

In such trades as the cement mason, the testing laboratories of the school, the draftsman's table and the applied problems in arithmetic will take the place of the hand tools.

#### *Careful Note Taken*

The progress of the apprentice on the job is watched and such frequent readjustments made as will mean for all-round training.

Admittance into the trade from day vocational schools of a pre-trade sort, the course of study of which meets the requirements of the Commission, has already been arranged for in several trades, with allowance made for an advanced wage and a shortened apprentice period.

The methods adopted by the New York City Commission can be adapted to a considerable degree by most of the cities of over 100,000 population and in some of those with a smaller population.

Where the industry provides good tool practice much of the school shopwork may be eliminated. It is hoped that the result of the concentrated effort in New York will not be that told in the story of the chameleon which, when placed on a piece of red goods turned to a shade of red; when placed on blue goods turned to a shade of blue, then on green goods to a green, but when placed on a Scotch plaid blew up in trying to make good. Rather is it hoped that the chameleon-apprentice-journeyman, when he is confronted with the Scotch plaid industrial complex, will turn to a neutral efficiency and prove his worth.—*The Constructor*.

### THE GRAVITY SYSTEM OIL BURNER

With the whole nation turning to oil as a fuel; a change brought about by the inconvenience and objectionable conditions necessary in burning coal; the diminishing supplies; not to mention the threatening shortages and the annual labor fights, the question that arises in the mind of the individual is "what is the best way to burn oil?" With scores of oil burners on the market and with each one making an equally strong appeal for

its advantages, it is a hard nut for the public to crack.

In this article, we shall endeavor to set forth the difference in the two types of oil burners, i. e., power feed and gravity feed, in an unbiased way. The reader may draw his own conclusions.

#### *Power-using Burners*

Generally speaking, oil burners are divided into two classes: power feed and gravity feed. Most power burners rely on electrical devices and motors to pump the oil from a tank into the burner and then to atomize the oil by running it through a rapidly rotating fan or by some other means of mechanically reducing its molecular size. Then, too, there are burners that use gravity feed for bringing oil into the burner from the tank, thus eliminating the use of a pump, but a motor is used to give pressure to the oil stream so that the oil may be forced into an atomizing device under great pressure and the atomized oil projected forth at the nozzle.

In all of the above methods, electrical or at least moving pieces of machinery are necessary in order to burn the oil. Naturally, there is a great deal of expense, noise, vibration and possibility of wear attached to them. Some of them have the advantage of using a low grade of oil—some of them crude oil—but it is a question whether the saving on the oil will compensate for the additional expense of the additional parts and the cost of mechanical operation. Of course, there is the convenience that goes with all types of oil burners, but by means of the type of burner described below, the disadvantages of the power burners are eliminated without losing any of the convenience of these burners, in fact there are even more elements of convenience.

#### *Gravity Oil Burners*

The second type of oil burner—or more correctly oil-gas burner—depends entirely upon gravity and nature for its operation. There are no moving parts, no chances for wear and no noise or vibration. The equipment is so simple and can be manufactured at such a great rate of speed, that the cost is far less than the majority of the power burners. In this type of burner, the oil is led from the tank to the burner by gravity and it is atomized by generating the oil in the feed pipe before turning the burner on. The pre-heating transforms the oil into a vaporized body that when released and precipitated upon a hot plate, bursts into flame. Pressure is obtained by gravity and by running the oil through a large diametered pipe line and releasing the vapor through a minute orifice.

In this latter system, there is no loss of heating efficiency, and while heavy oils have been burned in this type of burner, the companies manufacturing them do not advise the use of anything heavier

than distillate. For this reason, the fuel cost is a bit greater than some of the most economical of the power burners burning crude oil, even running a bit more than coal at times, but the lack of operating cost more than makes up for the difference between these burners and power burners. Then, too, there is simplicity of construction in this type of burner that makes it a far more understandable piece of machinery than the complicated power type. It is mainly because of this simplicity of construction that this burner can be manufactured to sell at such a reasonable price.

From the above it would seem that the oil-gas type of gravity burner has all of the advantages and none of the defects that go with burning oil as a fuel. That in a sense is true. In the matter of safety, the power burners have of course, the advantage of mobility of the storage tank, i. e., the tank may be placed at any convenient place in the yard and buried, or it may be placed quite a distance from the house. However, this may be done with the gravity type burner with the tank placed outside and higher than the burner. With the gravity type of burner, the tank must necessarily be higher than the burner by several feet, and the tank should be at least seven feet from the burner. Oil has the peculiar property of being non-combustible except when pre-heated or when a wick is supplied, and this tends to bring the danger from combustion to the minimum. Furthermore, since oil will not burn except under the above conditions, the flame could not in any way work its way back through the feed line to the tank.

On the Oliver Oil-Gas Burner, the burner that the writer is most familiar with, further precautions are taken to prevent the fire-hazard. A special overflow pipe through which the oil

flows to an overflow cup, is attached, so that should anything happen that the fire be put out, the oil would run into a cup, which, when two-thirds full, drops down, shutting off the valve that regulated the flow of oil. The possibility of the feed line becoming clogged for any reason is obviated by the use of a strainer at the point where the feed line enters the tank. The oil is strained from the bottom of the strainer to the top, and any sediment can be easily removed by means of a cock in the bottom of the strainer.

Thus, in conclusion, we find that in the power burner the advantage lies in the ease of placing the tanks at any desired position, and in some cases in the initial fuel cost, while the gravity burner has the advantage of no moving parts, no noise, no expensive equipment, no switches, or other electrical apparatus, no operation cost, greater convenience for heat control and very low initial cost.

Of course in all methods of oil burning, there is the elimination of dirt and soot and ashes and in oil burners on which it is possible to install thermostatic control, there is the elimination of janitor service. While the fuel cost will sometimes amount to slightly more than coal, that should not be made a basis for comparison when the work saved and convenience is taken into account. Furthermore, the gravity system will just as often prove itself cheaper or as cheap as coal, depending, of course upon the grade of coal formerly used, the care of the burner, and the knowledge of operating it in the most efficient and economical manner.

#### STANDARD RECOMMENDED PRACTICE FOR PORTLAND CEMENT STUCCO

1. *Design*—Whenever the design of the structure permits, an overhanging roof or similar projection is recommended to afford protection to the stucco. Stuccoed copings, cornices and other exposed horizontal surfaces should be avoided whenever possible. All exposed stuccoed surfaces should shed water quickly, and whenever departure from the vertical is necessary, as at water tables, belt courses, and the like, the greatest possible slope should be detailed. Stucco should not be run to the ground whenever other treatment is possible. Should the design of the structure require this treatment, the backing should be of tile, brick, stone, or concrete, providing good mechanical bond for stucco, and should be thoroughly cleaned before plastering. Unless special care is taken to thoroughly clean the base and each plaster coat from dirt and splash before the succeeding coat is applied, failure of the stucco may be expected.

2. *Flashing*. Suitable flashing should be provided over all doors and window openings wherever projecting wood trim occurs. Wall copings, cornices, rails; chimney caps, etc. should be built of concrete, stone, terra cotta, or metal with ample overhanging drip groove or lip, and watertight joints. If copings are set in bricks with mortar joints, continuous flashing should extend across the wall below the coping and project beyond and form an inconspicuous lip over the upper edge of the stucco. Continuous flashing with similar projecting lip should be provided under brick sills. This flashing should be so installed as to insure absolute protection against inferior leakage. Cornices set with mortar joint should be provided with flashing over the top. Sills should project well from the face of the stucco and be provided with drip grooves or flashing as described above for brick sills. Sills should also be provided with stools or jamb seats to insure wash of water over the face and not over the ends. Special attention should be given to the design of gutters and down spouts at returns of porch roofs where overflow will result in discoloration and cracking. A 2-inch strip should be provided at the intersection of walls and sloping roofs and flashing extended up and over it, the stucco being brought down to the top of the strip.

3. *Preparation of Original Surface*—All roof gutters should be so fixed, and downspout hangers and all other fixed supports should be put in place before the plastering is done, in order to avoid breaks in the stucco.

Metal lath and wood lath should be stopped not less than 6 inches above grade to be free from ground moisture.

All trim should be placed in such manner that it will show its proper projection in relation to the finished stucco surface, particularly in overcoating.—*Associated Contractor*.

#### HINTS FOR INSTALLING BRASS PIPES

The following extract is made from an address delivered by Mr. John F. Gowen of the Copper and Brass Research Association before the Master Plumbers' Association, Philadelphia.

Brass pipe cannot rust, and needs no extra size to take care of clogging by rust. On this basis it becomes possible initially to install a smaller sized brass pipe than would be required were iron or steel used. Many years' experience have demonstrated that the following is entirely practical:

*For Mains and Risers in Hot Water Lines*

½ in. brass pipe will do the work of ¾ in. iron,

$\frac{1}{2}$  in. brass pipe will do the work of 1 in. iron.

$\frac{3}{4}$  in. brass pipe will do the work of  $1\frac{1}{4}$  in. iron.

1 in. brass pipe will do the work of  $1\frac{1}{2}$  in. iron.

$1\frac{1}{2}$  in. brass pipe will do the work of  $2\frac{1}{2}$  in. iron.

2 in. brass pipe will do the work of 3 in. iron.

#### *In Cold Water Lines*

$\frac{1}{2}$  in. brass pipe will do the work of  $\frac{3}{4}$  in. iron.

$\frac{3}{4}$  in. brass pipe will do the work of 1 in. iron.

1 in. brass pipe will do the work of  $1\frac{1}{4}$  in. iron.

$1\frac{1}{4}$  in. brass pipe will do the work of  $1\frac{1}{2}$  in. iron.

$1\frac{1}{2}$  in. brass pipe will do the work of 2 in. iron.

2 in. brass pipe will do the work of  $2\frac{1}{2}$  in. iron.

In branch lines, both hot and cold  $\frac{3}{8}$  in. brass pipe will do the work of  $\frac{1}{2}$  in. iron.

This economy of using a smaller size brass pipe is so well established that the Building Code of New York City reads as follows:

"Sec. 153—The diameter of all riser lines in plumbing system shall be not less than three-quarters ( $\frac{3}{4}$ ) inch; except that when. . . Brass pipe is used, the minimum diameter may be one-half ( $\frac{1}{2}$ ) inch."

In connection with the smaller sizes, depending whether they are branch lines or risers, it is, of course, necessary to comply with the building code of the locality in which they are being installed. By figuring the sizes and weights of the requisite piping in accordance with the above tables the complete cost for most brass pipe jobs exceeds only by a very small margin the cost of the finished job when using iron or steel pipe.

The installation of brass pipe presents no greater difficulties than those met when installing pipes of iron or steel. Presuming that the correct size of pipe has been determined on, order pipe "iron pipe size." By this is meant brass pipe for plumbing work which has the same dimensions as iron or steel pipe. In other words the same size dies that are used for threading iron or steel pipes will also thread the iron pipe size brass pipe because it has the same outside and inside diameter as the iron or steel pipe.

Brass fittings, which are the only fittings that should be used with brass pipe, should be obtained from a recognized manufacturer. It is essential that they be properly threaded to produce good joints, for with poorly threaded fittings the joint is sure to leak.

Brass pipe threads easier than iron or steel pipe and for this reason some few precautions should be observed. To

start with, a poorly threaded iron or steel pipe can be screwed home in the fitting and left to rust tight. With brass pipe, good threads are necessary to obtain tight joints—this means good dies. Good dies have their cutting edges slightly tangential to the pipe surface whereas a poor cutting die will have the cutting edges pointing directly toward the center of the pipe. This results in tearing the threads. Both the pipe and the fittings must be tapped standard gage and standard depth, otherwise leaky joints will result.

The smaller sizes, say 1 inch down, should have at least three perfect threads over which the fitting is finally screwed up tightly with the wrench. In the finished work no threads should show. A good mechanic does not have any threads showing, and he can accomplish this result without having to cut the male threads too small. Care in threading is the answer to successful brass pipe joints. No pipe filling compound is necessary where the male and female threads are carefully and correctly cut. Wicking has lately been recommended as preferable to such compounds as red lead and glycerine and red lead and oil. When threading oil may be used to advantage, although it is not absolutely necessary. It makes for easier working conditions.

When using the ordinary pipe vise, do not screw it down more than just enough to hold the pipe and keep it from turning. It is much better to attach a set of lead jaws or special jaws to the vise which prevent the teeth from cutting into the brass pipe. Certainly with polished or nickel plated brass pipe such protective jaws are a necessity. They may be obtained from vise manufacturers at a reasonable cost.

Keep the end of the brass pipe being threaded as near to the vise as is possible with comfort. If the pipe stick out too far it is apt to be bent or strained in the threading. When actually screwing home the pipe don't use a large stillson wrench as the leverage is too great and the teeth cut into the pipe. It is much better practice to use a friction wrench when installing brass pipe. Such wrenches are readily obtainable and are expressly manufactured for the purpose. They will not cut, dent or bruise the pipe and will produce a better appearing job. Where polished or nickel plated pipe is used they are absolutely necessary.

In those larger installations where expansion and contraction enter into the problem as a major item, go on the same basis as with iron or steel pipe, bearing in mind, however, that brass expands .0000106 per degree F., copper .0000093 per degree F., and iron or steel about .0000067 per degree F. Where the pipe is imbedded in concrete it is advisable to wrap it with asphalt paper or wind with

mineral wool in order to allow the pipe to move after the concrete hardened. Brass pipe has been directly imbedded in concrete with success, but with any material that expands it is better practice to allow for such movement rather than risk the necessity of expensive repairs.

#### *Installation Hints*

Use only the best brass fittings. Do not use iron fittings on a brass pipe job.

Use good dies, without broken teeth, and with their cutting edge tangential to the pipe.

Keep the end of the pipe as near to the vise as is consistent with easy working.

While a lubricant is not absolutely necessary, it facilitates threading.

Use care in threading and cut the threads down to exactly standard gage or size.

Be sure to cut perfect threads; the smaller sizes, one inch or under, should have at least three perfect threads to be screwed up with the wrench.

In the finished joint no threads should show. A good mechanic accomplishes this without having to cut the male threads too small.

Best appearance in the finished job is obtained by using friction jaws in the vise and friction wrenches. Use care if you screw brass pipe home with a stillson wrench.

With careful threading, good fittings and proper screwing home, no pipe "dope" is necessary. Wicking is recommended as preferable to lead compounds.

—*Architecture and Building.*

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

It is surely an injustice to your workmen as well as a source of loss to yourself to supply poor tools in your shop equipment. No man can do anything approaching good work with tools that take the edge off enthusiasm. In shop management, as in most things, details are the whole cloth. Tools are like men. They do good work or they do not, according to the character which they possess. Character in tools is a matter of good materials, expert making and correct design.

The impractical dreamers are not the architects, but the clients themselves, as a rule.

Fire and Marine  
Insurance  
Company*

*Founded 1792*

## *A Builder Carries Many Risks*

More than he would like, as a rule. There is one he need not assume. That is the fire risk. Always present, yes, but adequate insurance will cover the danger of loss.

Your agent can arrange to automatically increase the value of the policy as the operation progresses. Ask for a North America Builders' Risk Policy. It is sound indemnity.

## **Insurance Company of North America**

## **For Lowering the Freezing Point of Concrete—**

**And making it Permanently Hard and Waterproof**

**T**HE addition of "ANTI-HYDRO," a liquid integral compound to the gauging water, lowers the freezing point of concrete from 15 to 18 degrees, allowing you to work right on through the cold weather.

"ANTI-HYDRO" also makes concrete *permanently* hard and waterproof, all in one operation. Easy to use—simply mix it with the gauging water.

For 19 years "ANTI-HYDRO" has proved to be the best by test.

Send for information or specifications on any type of concrete work. Stock carried by The Van Sciver Corporation, Parkway at 24th St., Philadelphia, Pa.

## As The Editor Sees It

The estimated cost of all buildings, alterations, additions, repairs and miscellaneous work in buildings for which permits were issued by the Philadelphia Bureau of Building Inspection for 1923 was \$122,650,935, according to detailed reports printed on other pages of this issue of the GUIDE, an increase of \$7,769,895 over 1922, which before 1923 was the greatest record made. Thus 1923 broke all records for work started in any year.

Dwelling construction shows a falling off in 1923 of 1423 houses of all types as compared to 1922. As Philadelphia was approximately 20,000 houses below requirements at the beginning of the year 1923, we are now about 21,423 short of requirements. The average number of dwellings erected per year in Philadelphia prior to 1917 was 7,150. The average from 1917 to 1920 inclusive was 2550 which showed a decrease per year of 4,600 houses for the four years, totaling 18,400. With a shortage in 1921 of 4,900 houses, Philadelphia began 1922 with approximately 23,000 short of requirements. With an increase in dwelling construction in 1922 Philadelphia was then approximately 20,000 houses short. Now a decline in housing in 1923 increases again our shortage.

Although there was a decrease of 1423 dwellings in 1923 over 1922 the cost of dwellings started in 1923 was slightly more than in 1922, \$49,325,370 being expended in 1923 and \$49,273,820 put into

dwellings in 1922. Next to residence construction came in order: office buildings, \$12,516,200, an increase of \$4,383,210 over 1922; manufactories, \$7,680,400 a decline of \$607,100 from 1922; schools, \$7,212,315, an increase of \$510,615 over 1922; garages, \$5,415,885, an increase of \$343,100 over 1922; tenement houses, \$4,086,840, a decline of \$391,660 from 1922.

March led in the number of new buildings started in 1923 with 2615 costing \$21,064,685; April with 2984 costing \$19,729,815 was second, and May followed with 2298 costing \$12,709,660. December, 1923, was the lowest in number of operations, 1180, costing \$5,298,995.

### Estimated Cost for Each Month

Month	Per- mits	Opera- tions	Estimated Cost
Jan. ....	747	967	\$ 6,504,100
Feb. ....	768	1,295	6,799,960
March ...	1,359	2,615	21,064,685
April ....	1,540	2,984	19,729,815
May ....	1,566	2,298	12,709,660
June ....	1,334	1,742	8,370,875
July .....	1,460	1,920	11,346,155
August ...	1,346	1,848	8,246,280
Sept. ....	1,097	1,390	7,086,060
Oct. ....	1,429	1,972	10,950,310
Nov. ....	1,053	1,335	5,406,040
Dec. ....	814	1,180	5,298,995
	14,513	21,546	\$122,650,935

The following table shows the total for each year back to and including 1909:

Year	Operations	Estimated Cost
1909 .....	17,294	\$42,881,370
1910 .....	16,383	37,866,565
1911 .....	16,215	40,030,985
1912 .....	14,907	37,173,635
1913 .....	14,813	38,763,850
1914 .....	15,709	35,419,605
1915 .....	17,712	39,444,125
1916 .....	15,613	49,896,570
1917 .....	8,977	34,016,408
1918 .....	5,950	15,452,670
1919 .....	14,509	65,088,750
1920 .....	12,512	55,305,400
1921 .....	14,654	42,790,780
1922 .....	22,588	114,881,040
1923 .....	21,546	122,650,935

The Forty-Second Ward, with 2441 dwellings erected in 1923 led all districts and built almost three times as many houses as any other ward.

Reports from over all the country show a marked increase in building in 1923 and 1924 shows great possibility of passing 1923. Winter Construction is increasing in all sections of the country and this should help increase the volume of 1924 building.

We'll write your advertising without charge. All we ask is that you pay for the space and provide our ad. man with the necessary selling pointers.

# \$5000 Extra for You Thru This Amazing Invention

There are 16 models of Oliver Burners to fit all hot water, hot air, or steam furnaces. Thermostatic equipment optional. Will outlive the furnace itself.

## At Last! A Furnace Oil-Burner Every Family Can Afford

CONTRACTORS, architects, and builders, have an extraordinary opportunity to make from \$2,500 to \$10,000 a year as distributors for the remarkable new Oliver Furnace Oil Burner. This amazing invention is a real practical, efficient, furnace oil burner—without noisy motors, without electricity or any complicated machinery—and sold at low price.

### Twice the Heat of Coal

The Oliver Oil-Gas Burner for furnaces has been perfected to the point where it combines 95% air with 5% oil to produce an intense, clean flame that gives twice the heat of coal if necessary.

### No Expensive Equipment

This simple device without any moving parts, converts *any* furnace into an

automatic heating plant. It maintains a steady, even temperature in coldest Winter weather. It can be quickly and easily installed. It is absolutely safe—lasts a lifetime

### Perfect Heating Guaranteed

Home owners everywhere realize the wonderful convenience and economy of burning oil. In over 150,000 homes, Oliver Burners have been so thoroughly tested that they are sold under an extraordinary guarantee of complete satisfaction.

### Mail Coupon For Attractive Offer

There is already an established demand for this inexpensive oil-burning equipment. By acting as our distributor, you have an opportunity for a large volume of business yielding an extremely attractive income, with only a small amount of effort. Mail the coupon below, or write us for plans and special offer to men in the building field. We will send you free, working drawings and diagrams of the Oliver installation for every type of furnace. You can become our distributor on an extremely lucrative basis. Fill out and mail the coupon immediately.

# Free

to Builders, Architects  
and Home Owners

For a limited time we will send free installation diagrams and full information covering the installation of Oliver Burners in every type of furnace. You want to know all about this wonderful new furnace burner. Oliver burners are already installed in over 150,000 homes—they are manufactured and guaranteed by the oldest and largest manufacturers of oil-gas burners in the world.

Sizes to fit all heating stoves. Gives warm room at once—no waiting for fires to come up.

Fire and Marine  
Insurance  
Company*

*Founded 1792*

## ***A Builder Carries Many Risks***

More than he would like, as a rule. There is one he need not assume. That is the fire risk. Always present, yes, but adequate insurance will cover the danger of loss.

Your agent can arrange to automatically increase the value of the policy as the operation progresses. Ask for a North America Builders' Risk Policy. It is sound indemnity.

# LINOTILE FLOORS

## Have Character

Unusually effective designs are obtained with Armstrong's Linotile Flooring. As its name indicates Linotile is tile made and laid in separate units, and not being supplied in sheets or in set patterns is capable of wide expression in design.

But aside from the effective designs, Linotile is

Resilient  
Non-slippery  
Silent underfoot  
Warm  
Sanitary

Easy to clean  
Odorless  
Artistic  
Durable  
Reasonable in cost

We shall be glad to give you full details of the wonderful possibilities of Linotile as a flooring for residences, banks, offices, public buildings, etc.

## As The Editor Sees It

EVERYWHERE, in all lines of activity, we see glowing accounts of what a prosperous year 1923 has been. The biggest year building has experienced in all parts of this country. In Philadelphia, as seen by the resume of 1923 building permits printed last week in the GUIDE, the building trades certainly have been most active. Newspapers are filled with head lines and captions holding out great prospects for 1924. We read "Continued Good Trade Expected in 1924," "Most Lines Had Excellent Business Last Year With Prospects Bright Now," then "Larger Achievement is Foreseen for 1924." Next, "Decrease in Number of Business Failures," "Realty Prospects Good," "Encouraging Trend in Electrical Utilities," "Steel Markets Active," "Wool Lines Promising," "Gas and Electricity to Have Good Demand," "Labor Looking to New Year With Confidence," "Nation Going Strong," "Lower Prices Seen," "Practically All Sections of U. S. Report Activity," "Prospects are for Gain in Business," "Wall Street Sees Progress in 1924," "Oil Industry Has Better Sentiment," "Outlook for Leather is More Encouraging," "Shoe Plants Busy," "Woolen Industry to Have Big Year," "Future is Bright in Auto Industry," "Railroads Break Many Records in a Most Remarkable Year," "Traffic in 1924 is Expected to be as Large as in 1923," "New Year Finds American Farmer More Optimistic."

What more could be said to fill us with brilliant prospects and satisfying assurance that we are starting a year that lays open to us many opportunities for great business.

It is very pleasing to contemplate all the promising signs of prosperity facing this great country at the beginning of this New Year. We believe, however, that the man who complacently accepts his prosperity and success without thought for his fellow creatures, begets for himself only the husks of satisfaction and happiness. The "Golden Rule" is just as much a part of business as of any other portion of our lives. After all, Christianity is a life to be lived every day, not a masquerade costume with which to disguise ourselves on Sunday.

With so much facing us in the Architectural and Building Trades, why not more "honest to goodness" fair play in our every day practices? Every one associated with architects, builders and sub-contractors is most familiar with the common practice existing very largely throughout architecture and building of "huckstering" bids. What a deplorable practice this is! Why should an architect ask a builder or a sub-contractor to cut his bid, or why should the recipient of bids call in the bidders and play one bid against the other forcing the eager bidder to accept a lower bid than is fair or profitable. No concern can stay in business if profit can not be obtained

from the services performed. Why not give the lowest responsible bidder the work? Cut out the "huckstering" unfair play. If you don't intend to give the job to the low man among those you invite to bid, don't invite the undesirable one. It costs money to prepare estimates. Be just as fair in your practice with those you invite to bid as you would have them be fair to you if the position were reversed.

If builders and sub-contractors and material houses, after they put in their bids, would have enough backbone to stand firmly on their price, the despicable custom of cutting bids would soon be killed. Every one would be happier and would make a profit on the job instead of making themselves believe that because a job was handed them they were going to make money.

Put in a bid that includes a fair profit and stand on your bid. If all sub-contractors and builders adhere to this practice the work will be awarded properly and all will have cleaner business and a prosperous year.

The only road to advancement is to do your work so well that you are always ahead of the demands of your position. Our employers do not decide whether we shall stay where we are or go on and up; we decide that matter ourselves. Success or failure is not chosen for us: we choose them for ourselves.—H. W. Mabie.

## 1924 MARKS CENTENNIAL OF CEMENT INDUSTRY

Old records on file in the British patent office show that in 1824—just one hundred years ago—an English brick-layer named Joseph Aspdin was awarded a patent for a material he called "portland cement." At that time a number of men were engaged in experiments in an effort to produce a cement superior to the natural cements then in use. As far back as 1756 an English contractor named John Smeaton had discovered that an impure limestone containing a certain amount of clayey matter possessed decided hydraulic properties when burned. Aspdin's contribution was his discovery of the value of taking proper proportions of different ingredients and then pulverizing and thoroughly mixing them before they were burned into clinker, which later was finely ground. He called his material "portland" cement because when it hardened it resembled a building stone quarried on the Isle of Portland.

Although Aspdin's invention was brought out in 1824, it was not until 1872 that the portland cement industry started in the United States. Of course natural cements had been used here for years, and in the late sixties imported portland cement was gaining a strong foothold in the American market. In 1872 David O. Saylor established a plant for the manufacture of portland cement at Coplay, Pennsylvania, and so far as can be ascertained, this is the first plant of its kind to be started in this country. Within a few years other plants were built at South Bend, Indiana, Kalamazoo, Michigan, and various parts of the east.

Many interesting stories are told in connection with the early efforts to produce portland cement in the United States. One man used a cookstove in which to burn rock while conducting his experiments. Another used a piece of sewer pipe as a kiln, and ground his materials in a coffee mill. Still another pressed a bent car-axle into service as a part of a grinding machine. For a number of years the reputation of imported cements was so strong that American manufacturers had a difficult time in securing a market for their product. It was not until the late nineties that the home product took its place on an equal footing with imported cement, and eventually won the market.

One hundred years after the invention of the material, the plants of the United States are producing more portland cement than the rest of the world combined. United States Geological Survey figures indicate that about 135,000,000 barrels were made in this country in 1923.

This development has necessitated the revolutionizing of methods of manufacture. Where the early pioneers used

crude dome-like kilns for burning their raw materials a modern plant contains huge rotary kilns—steel brick-lined cylinders that may weigh as much as eight Pullman cars each. One of these great modern kilns will produce as much clinker in a day as one of the old kilns could turn out in a year. The old fashioned grinding machinery has been supplanted by a variety of crushers and centrifugal, hammer and ball mills, in which the raw materials and clinker are reduced to a powder finer than flour.

The centennial of the invention of portland cement is an important date in industrial history, and as such will be fittingly observed by various organizations in the building field.

## THOSE WHO PLAN AND BUILD

Faith is the basis of progress. A man must have faith in himself, his neighbor, his city and his community if each of them is to prosper and go forward. That sort of faith which causes an individual or an organization to preach community spirit, the merits of local products and above all the competency of its architects, engineers and contractors, is beautiful to contemplate. But when this evidence of faith is broadcasted throughout the land 365 days in the year and on the 365th day, the community spirit, or whatever it is that causes sudden conversions to the detriment of the community, brings its architects, engineers and contractors from afar to do that which local technical men are better qualified to perform, the ordinary mortal wonders why. He also wonders why it is necessary for local concerns and individuals, ready and willing to supply that which is necessary in building a representative structure, to be compelled to fight and bring to bear all the influences at their command, that they may have even a small part in the construction of that for which their money is helping to pay.—*Pacific Builder and Engineer.*

At its meeting in New York City, the Board of Directors of the American Institute of Architects deemed it wise to change the place at which the fifty-seventh annual convention will be held.

Some months ago it seemed both wise and possible to hold the convention in New York City and a temporary committee was appointed to study and report to the Board in November. After a careful canvass it was thought best, in view of the limited time available for preparing for the elaborate program conceived by the Board, that it would be wiser to hold the fifty-seventh convention in Washington in May, 1924, and to hold the fifty-eighth convention in New York City in 1925.

## A SURE CURE FOR STRIKES

BY ERNEST FLAGG AYRES

Only a few years ago, the workers of the northwestern lumber camps were about as radical a bunch as could be found anywhere in the United States. The I. W. W. was born in these camps, was fostered in them, and it grew with alarming rapidity under the shadows of the big trees of Washington, Oregon and Idaho. It was in the Northwest that the "Wobblies" first tried their new found strength. Everyone remembers the big general strike in Seattle. It proved a

fizzle, but it left smoldering embers which the strike leaders hoped to fan into a stronger flame in later years. Today, even those embers have been extinguished, and by the workers themselves.

Another union has stepped into the lumber camps, an organization that has solved the problem of industrial co-operation. It has never had a strike. It never will have one. By the very nature of its organization, it cannot strike, for the workers will never vote for a lock-out, nor the employers for a walkout. Both sides are represented in this strange union.

### U. S. Organizes Four L's

At a time when the I. W. W. was urging sabotage and every other possible means of delaying the production of spruce for airplanes, Uncle Sam stepped in and helped organize the Loyal Legion of Loggers and Lumbermen, better known as the Four L's. He withdrew his official support shortly after the armistice was signed, but the plan had worked so well in war times that no one could see any reason why it would not do equally good work under peace conditions. It had rather tough sledding for a while, but today it is one of the fastest growing organizations in the country. It has about ten thousand members, all of them in the Pacific Northwest, and other sections of the country are beginning to sit up and take notice.

Unlike most labor organizations, its membership is not limited to the laborer alone. The foreman, the superintendent, even the Big Boss himself, are members, with the same duties, the same vote, and the same responsibilities as the humblest "hunky" in the camp.

According to W. C. Ruegitz, Executive Secretary of the Four L's, the secret of their success lies in one word—"Conference." Other unions have their "Grievance Committees," and the very name indicates the attitude of its members toward the employer. They never visit the main office to talk over conditions in the plant, except when some one of their number has had his feelings wounded. Their claim may be just, or it may not. In either case they view the problem from just one angle, that of the laborer, regardless of the merits of the employer's position.

### Place Cards on Table

Don't get the idea that this is a paternalistic society, controlled by the Boss, with the men paying dues, but afraid to say a word which might imperil their jobs. Nothing of the sort. Just attend one of their meetings and listen to the fight when some particularly important issue is at stake. Both sides scrap it out in earnest, but each side places all its cards on the table, face up, and neither party has any legitimate kick

coming when the final decision is reached.

Here is the plan of organization. Each mill, or camp, has its own conference committee, elected by the workmen from among their own number. These men meet with a similar committee appointed by the management from their representatives on the job. Both sides are more familiar with local conditions than any outsider, no matter how well-intentioned he could possibly be. As a general rule, it does not take them very long to reach a mutually satisfactory decision on any disputed point. But if they cannot agree, what then? Is there a strike, or a lock-out, with the plant shut down during a busy season, and labor left to drift to other jobs—or starve? Not a bit of it. The mill keeps right on turning out lumber, and the men continue on the payroll, while the unsolved problem is passed on to a District Board which is elected annually by the local units. These Boards are composed of an equal number of representatives of the loggers and of the employers. There are twelve such districts in the Northwestern states, enough so that each Board can keep in close touch with conditions in its jurisdiction.

If the vexatious problem proves too big for the District Board it goes to the highest Four L court, the Board of Directors, composed of one worker and one employer member of each District Board, or twenty-four in all. These men gather round the table and dissect that problem until there is nothing left of it except the bare essentials. Then they reach their decision, and every thing is lovely once more. In fact, everything has been lovely all the time. No strike, no lock-out, no waste and no hard feelings.

#### *All Disputes Settled*

Of course, with an even number on the Board of Directors, there is always the possibility of a tie vote. If this should happen, the matter is submitted to an impartial arbitrator, with both sides pledged to accept his findings. But no problem has yet been submitted to the arbitrator. In fact very few questions ever reach the Board of Directors. The conference committees and district boards settle all disputes as they arise.

"This system," says Mr. Ruegnitz, "is merely carrying the principle which made the small shop so successful a couple of generations ago, into the government of larger units. My grandfather had a wagon shop back in Iowa. He knew every one of his employees personally, and they all knew him. They knew his problems; when the wagons must be ready for delivery, and why. He knew their difficulties in handling the materials and simple tools in the little shop. They

met every day at a conference table. To be sure, it was grandma's dinner table, but what better place can be found to discuss problems dispassionately? No one can get into a very heated argument when his mouth is full of pie.

"Then came the days of machinery, larger organization, and absentee management. Sometimes the superintendents were worthy successors of the old time employer. They were sympathetic, without being soft; strict disciplinarians, without being cranky. Others were impressed with the idea that they were hired to make money for the boss, so they emulated the tactics of the slave driver. Still others were easy going, altogether too much so. The men soon learned to take care of themselves under the new system. The slave driver found his production falling off, yet to save himself he could not catch anyone lying down on the job. The easy boss found himself being run over on all occasions, and the men in such shops, usually wound up by killing the business. The efficient superintendent got results, but his number was limited—very limited.

#### *Men, Materials, Machinery*

"In the early days, the employer had but two items to consider—Men and Materials. Now another 'M' has been added, for machinery has become a third link in the chain of production. With the proper co-ordination of these three 'm's' labor difficulties will cease. The trouble is that so many employers consider only Materials and Machinery. They forget the most important element, Men, or at best regard them as in the same class as Materials. You cannot have a successful conference and leave out the Men."

Here is how the plan works out in practice. A superintendent of a certain mill asked to have a Four L meeting called in the evening. Anxious to have as many as possible in attendance, he posted notices stating that any man who came would be paid for one hour's time. No one was obliged to come, and no black mark was placed against his record if he stayed away. On the other hand, he did not get that hour's pay if he failed to attend. At the end of the hour he was free to leave, for no pay would be granted for extra time spent at the hall. Yet he could remain as long as he liked. It was distinctly up to him.

The superintendent got his crowd, as he hoped. He had a few things he wanted to tell all the workers, and here was his chance. Among other things, he mentioned the high cost of oil and grease at the mill. He told them that it was costing nine cents per 1000 ft. B. M. for this one item, and he wanted their opinion as to whether or not this was an excessive cost. Then he turned to one of

the men and asked him to tell how he used his oil and grease in his part of the work. After this chap had explained his system, others were called upon, and a regular round table discussion was started. The hour passed by, but no one wanted to leave. (Too interesting. At the end of two hours solid discussion, the men themselves selected the best points from each system, and everyone agreed to try it out and see how it would work. Within a week, the cost of oil and grease per 1000 ft. B. M. had dropped from nine cents to a little less than five cents, and no bearings were allowed to go dry, either. The unnecessary waste had been eliminated.

#### *Improved Conditions*

The superintendent says that the money saving was the least advantage gained from that meeting. The next day when he went around the mill, men who had never glanced at him before now greeted him with a pleasant "Good Morning" and a cheerful smile. Heads and shoulders up, there was nothing servile in these greetings. It was man to man, with a pride in working for an organization where the "old man" would come in and ask the boys to help him solve his problems.

Other men, old timers with more experience than the superintendent, came to him with suggestions for increasing the output, or for improving certain conditions around the plant. Naturally, it was not possible to adopt all these suggestions at once, but it showed that a new esprit de corps had been developed in the organization. He had built up that intangible quality called morale, the most valuable asset any army can acquire, whether in war or in the equally important battles of industry.

Here is another example of how the Four L system works. A Washington mill was unable to get sufficient cars to handle its "cut," and the railroad company reported that it would be at least thirty days before a larger supply would be available. The Superintendent called a special meeting of all the men, both day and night shifts, and laid the facts before them.

He told them that they could see how the lumber was piling up in the yards, and he read them the letter he had received from the railroad company. He added that he could get barely enough cars to keep one shift going, but he did not want to lay off any of the men.

The men discussed the situation among themselves and then asked if it would be possible to move enough lumber so that both shifts might work four days a week. This was satisfactory to the management and mill ran under that agreement for about a month.

In the olden days, the first notice given

the men would have been a sign on a locked door stating that the mill was closed for an indefinite period owing to shortage of cars. Or the night shift would have been laid off, creating hard feelings among the men, who had been unceremoniously dumped out of a job, and restlessness among the men who were still on the pay roll. The Four Ls handle things better, with no hard feelings on either side. It pays to lay all the cards on the table.

#### *Ten Thousand Join*

Don't think that the four L's have been accepted with open arms by all the men, or by all the employers. Many mill owners object to any form of organization among their employees. They will have nothing to do with the system, at least, not yet. And many of the men prefer the older methods of the American Federation of Labor or the more radical I. W. W., and cast their lot with these associations. There are seventy thousand men working in the lumber sections of the Pacific Northwest, and only ten thousands have joined the Four Ls. About one thousand have affiliated with the A. F. of L., and no one knows how many carry the little red card of the I. W. W. But it is the Four Ls who have fixed working conditions in the mills and camps, and who have voted unanimously, both employers and workers, in favor of the eight hour day. The Four Ls are the controlling influence in the lumber industry, and they have attained this place without a single strike, or a lock-out.

One reason for the miraculous peace and harmony which has prevailed in this organization is the wisdom in its choice of officials. Someone had to be Chairman of the Board of Directors. Someone had to be Executive Secretary. Should one be selected from the ranks of the management and the other from the workers? If so, which should be which? Like most big problems, the solution was simple. They went completely outside their own ranks and selected two men, eminently fitted for the work, to fill both positions.

Norman F. Coleman, formerly professor at Reed College, Portland, Oregon, was chosen as chairman of the Board of Directors. He has no vote, but he has infinite tact, abounding patience, and the ability to convince both sides that he is absolutely neutral and impartial. His personal knowledge of the lumber industry is more academic than actual, but he knows men and that is the most important qualification for his position.

#### *Executive Secretary Qualified*

They used an almost uncanny judgment in the selection of W. C. Ruegnitz as Executive Secretary, for it would have

been impossible to get a better man. Educated as a civil engineer, he soon saw the error of his ways and went into contracting where he stayed until called to fill his present position with Four Ls. He had spent several years in the lumber industry, both in the logging and the manufacturing fields. He had served as employment representative for several big companies, so knows how to bring the right man in touch with the right job. Every Four L employer knows where he can get good men when he needs them, and every Four L worker knows that he need not pay the extortionate charges of a private agency to get a job at good wages, and under standard working conditions.

Why not start similar organizations in other fields of industry. We have employers associations, presided over by employers, and governed by employers. We have labor organizations, with labor presidents, labor delegates, and an exclusively labor membership. Both organizations meet, examine questions from their own particular angle, and then lock horns to fight it out. It is usually a question of endurance, with both sides losing in the long run, no matter who happens to win the particular skirmish. Yet both associations are made up of reasonable men who would be willing to give a courteous hearing to the other fellow if they had some common meeting ground. The Four L system provides this common ground.

Why not get together and try it out? No one can argue that it will not work, for it has worked for more than three years under conditions that were worse than anything to be encountered in other branches of industry. The Four L insure against both Herrin massacres and Harrison lynchings. Isn't it worth a trial?—*National Builders' Bulletin*.

#### OFFICE OF THE CITY SERVICE COMMISSION

7th Floor, City Hall

Milwaukee, Wis., January 4, 1924.

"Builders' Guide",  
Perry Building,  
Philadelphia Pa.,

Gentlemen:

The City Service Commission of Milwaukee has been asked by the Milwaukee School Board to search anywhere in the United States for qualified architects for two new positions known as Chief and Assistant Chief of a new Bureau known as Buildings and Grounds, the salary of the two positions, which must be full time service, being from \$6,000.00 to \$9,000.00 for the first and from \$4,000.00 to \$6,000.00 for the second.

The Milwaukee School Board has an immense school building program before it,

part of which is caused by lack of building during the war period and the time immediately following, and part by the normal increase of the city and the demand for new school buildings. They have been dependent for their architectural work on a local firm, Van Ryn & DeGelleke, the work being handled by this firm on a part time basis. The School Board has determined that, in order to meet the need of the large number of new buildings, they must have two full time architects, and have, therefore created this new bureau which will also include the necessary draftsmen, etc. It is estimated that within the next five years approximately \$6,000,000.00 will be spent on new construction.

On account of the need for the immediate securing of such men, competition in which candidates submit designs on some standard specification, will be dispensed with and candidates will be requested only to answer a questionnaire on training and experience and to submit samples of executed work. A competent examining board of architects will go over these questionnaires and the work submitted, and those persons who are considered properly qualified will be called together, either in Milwaukee or some other city centrally located for the candidates, for a personal interview.

No architect interested in these positions should hesitate to immediately send in to the City Service Commission for a formal application.

The City Service Commission will appreciate your calling the attention of any of your readers who are qualified and interested to these two vacancies.

Very truly yours,

M. H. PLACE,  
Secretary.

Albert Kelsey, Philadelphia, has been awarded a medal by the Twentieth International Congress of the Americas held at Rio Janeiro "in recognition of his work as an architect and in the interests of closer and more cordial relations between the Pan-American republics." The presentation was made through the United States National Museum.

You owe it to yourself to keep in touch with what is going on in the trade, and you can do this only by becoming a subscriber to and regular reader of your trade paper. If you are not a regular reader of the Builder's Guide you should be. The cost is not excessive. A five-spot insures it fifty-two times in the course of a year.

The man with an order to place doesn't hunt you up in the city directory these days. He hasn't the time. If he can't find you in your trade magazine he can and does find somebody else, and that somebody else books the order.

## As The Editor Sees It

### SAFE CONSTRUCTION OF BUILT-IN GARAGES EXPLAINED BY DEPARTMENT OF COMMERCE

"Motorists who keep their cars in built-in garages, or garages attached directly to the side of their dwellings do not run an undue fire risk if they follow certain elementary precautions," states Mr. Ira H. Woolson, chairman of the Building Code Committee of the Department of Commerce, and consulting engineer of the National Board of Fire Underwriters, in an interview just given out. "We covered the subject of built-in garages for one and two-family houses quite thoroughly in the Recommended Minimum Requirements for Small Dwelling Construction that have just been published by the Department of Commerce," states Mr. Woolson, "and gave directions for constructing them safely, that can be followed by any competent builder.

"If a built-in garage is not properly constructed, it is a menace to life and property. Our investigations showed that if a fire does start in a single or two-car garage, it is not likely to be more severe than would be withstood by the construction classed as affording one hour fire resistance by the Bureau of Standards of the Commerce Department, the Fire Underwriters' Laboratories, and other authorities. It follows that with an incombustible floor, and the garage

separated from the rest of the building by unpierced partitions and ceiling that will meet the one hour fire test, there is no unreasonable fire hazard. Of course, the outside walls must be fire resistant too, and so must outside windows and the garage doors, in order to prevent flames from breaking out and spreading fire through windows, or to exterior wood work above. The code does permit, under stringent safeguards, a single swinging, self-closing fire door leading from the garage directly into the house, but we strongly advise that there shall be no opening whatever between the two. It is much safer to enter the garage from the outside."

For the sake of motorists and builders who desire complete directions, Mr. Woolson has prepared below a statement, giving the six rules from the code, together with the directions for carrying them out, as given in the appendix, with a few changes to simplify the working, which was a little more technical in the original in order to make the rules more practical to enforce. The rules are here arranged by Mr. Woolson "from the ground up" starting with floor construction, walls and partitions, then outside doors and windows, and dealing finally with the permissible case of a door directly between the garage and the dwelling.

Rule 1. Garage floors shall be of concrete or equally fire restrictive and impervious material.

For convenience in cleaning and to prevent dangerous accumulations of water, oil or grease, all parts of the floor should drain naturally.

Rule 2. Walls and partitions shall be built to meet the requirements of the standard one hour fire-test (mentioned above).

Many materials are acceptable under this rule, such as brick, hollow tile, concrete block, or gypsum block four inches thick; or reinforced concrete three inches thick. As a minimum requirement, walls may also be constructed of wooden studs spaced 16 inches center to center, with metal lath attached outside and inside. The outer lath is to be plastered and back-plastered with Portland cement stucco, and the inner lath plastered with  $\frac{3}{4}$  inch Portland cement or gypsum plaster. For interior partitions separating the garage from the rest of the dwelling,  $\frac{3}{4}$  inch Portland cement or gypsum plaster on metal lath, on both sides of studs spaced 16 inches apart, is satisfactory. The specifications for metal lath and plaster to be used are given fully in the Code Committee's Report.

Rule 3. The combined floor and ceiling construction directly above the garage shall be unpierced, and shall have a fire resistance of one hour. The same rule applies to the roof when the garage is attached to the side of the dwelling.

Ceilings or roofs of reinforced concrete, or some other type of incombustible

PRINTS**

tible construction that meets the fire test, are best and most reliable. In the case of true built-in garages, a good, inexpensive overhead construction is as follows:

Ordinary 2 inch or thicker floor joists may be used, spaced not more than 16 inches center to center, and properly bridged. The ceiling should be of heavy metal lath weighing not less than 3 pounds per square yard, and Portland cement or gypsum plaster not less than  $\frac{3}{4}$  inch thick. The metal lath is to be attached to the joists by sixpenny nails driven nearly home and the heads turned over against the lath, and is to be bent down 6 inches along the walls on all sides and securely attached to them. The flooring above the ceiling is to be double of  $\frac{7}{8}$  inch rough and finished floor boards, with a layer of asbestos or other high grade floor felt between.

Where the garage is attached to the side of a dwelling, an equivalent construction for the roof can easily be devised.

Rule 4. When a garage is located beneath a dwelling, all outside doors and windows with their frames and sash shall be of standard fireproof construction, and glazed with wired glass.

Only products approved by competent authorities should be used. A large variety of fire doors and windows have been tested and approved by the Underwriters' Laboratories, and are a standard commodity in the building material market. It is important that such devices should be installed in metal frames, and that the same hardware be used as that with which they were equipped when tested. If not, they may fail during a fire. Fire doors are made in both swinging and sliding types, and many of the former are as artistic as wooden doors. Wired glass glazing is required in all outside windows and doors to prevent flames from a fire in the garage from breaking through and endangering the structure or windows above.

Rule 5. Openings from a dwelling into a garage shall be restricted to a single doorway. This opening shall be protected by a standard swinging, self-closing fire door, with approved fire resistive frame and hardware. No glass shall be permitted in such a door.

A self-closing fire door is one that normally swings shut by a mechanical device. A swinging door is required because it fits closely into its frame and thereby prevents passage of heat and smoke when attacked by fire. Wired glass is not allowed in this door because it is liable to soften and sag from its fastenings at a temperature of about 1600 degrees Fahrenheit, which is a heat easily produced by burning gasoline or

oil. But, as stated above, it is better to have no opening in any of the partitions.

Rule 6. When a doorway connects directly with a cellar or basement on the same or lower level in which there is any heating device or gas fixture, the door sill shall be raised at least one foot above the garage floor level, or the doorway shall lead into a vestibule which connects with the cellar or basement by a second door.

This is to prevent fumes from gasoline which may leak or be spilled upon the floor from reaching a furnace fire or gas light that might be located in any lower portion of the building. It is well known that gasoline vapors are heavier than air, and will accumulate on a floor like water, and flow to any lower level, and if they come in contact with fire of any kind—even a spark—will ignite and flash back to the starting point, and cause an explosion. Hence the high door sill.

#### A NEW HOTEL IN YOUR TOWN IV. *Adapting the Hotel to the City's Needs*

A continuation of these practical, common sense discussions that are tracing the logical steps through which the new hotel should pass in order to properly safeguard its future.

BY W. L. STODDART  
*Architect*

*Reprinted Through the Courtesy of  
"Hotel Management"*

IN the foregoing article in this series I took up the question of the hotel's best site. Obviously, if the proprietors of the new establishment are interested in seeing it become a successful reality, the matter of the site is an extremely important one. But even if a hotel is built on the best available location, it will not succeed if it is not planned in such a way as to properly cater to the requirements of its patrons—and it is easily possible to plan a new hotel at the start in such a way as to meet the demands of its prospective guests. On the other hand, it is practically impossible to alter a fireproof building after construction. The cost of the alterations would be almost prohibitive. The seeking out of expert advice while the building is being planned will obviate such a condition, and in this way will frequently save many thousands of dollars. Furthermore, the directors should bear in mind their responsibilities as trustees for the stockholders, and do everything in their power to conserve the large investment that every modern hotel today represents.

Adapting a hotel to the requirements of any particular city is largely a question of properly analyzing that city's needs. Once these are determined, it is

CONTEMPLATED CONSTRUCTION: ARCHITECTS AND OWNERS: COST LIMIT: LAST DAYS FOR FILING BIDS:

CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Building**, Dock, between Walnut and Moravian streets, Philadelphia. Architects, The Ballinger Co., Twelfth and Chestnut streets, Philadelphia. Owners, Seamen's Church Institute, Second and Walnut streets, Philadelphia. Architect taking bids due February 5th.

**Plant (add.)**, Stenton avenue, Germantown, Philadelphia. Architect, The Ballinger Co., Twelfth and Chestnut streets, Philadelphia. Owners, Atwater Kent Mfg. Works, 4937 Stenton avenue, Philadelphia. Architect taking bids due January 31st.

**Garage**, Northeast side Unity, below Griscom and Penn streets, Philadelphia. Architect, W. E. S. Dyer, Land Title Building, Philadelphia. Owners, Frankford Grocery Co., on premises. Brick and steel, 1 story, 99x67 feet, asphalt built-up roof, cement floors, plumbing, metal window guards, bond, ornamental iron work, rolled steel sash and skylights, metal lath. Architect taking bids due January 25th, 10 A. M.

**Residence and Store (alts. and add.)**, 5216 Locust street, \$2,500. Architect, private plans. Owner, John Harvey, on premises. Brick, 3 stories add., 15x16 feet, general alterations. Owner will build.

**Bank and Office Building (alts.)**, Southeast Corner Twenty-eighth and Earp streets. Architects, Stuckert & Co., 1420 Chestnut street, Philadelphia. Owners, Wharton Title & Trust Co., on premises. Concrete vaults (2), steam heat, electric light, tile work, bank fixtures. Architects will build and are taking sub-bids.

**Supplies**, Philadelphia. Owners, Fairmount Park Commissioners, 127 City Hall, Philadelphia. Lumber, brick, cement, hardware, paint, glass, cast iron, plumbers' supplies, stone, tin, settees, picnic tables, border iron, gardeners' supplies, terra cotta pipe, broken trap rock and screening, broken slag, sundries, tree guards, top soil and nursery stock, road oils, lubricating oils and grease. **Miscellaneous Work**, paving, cut granite, curbing, vitrified and slag blocks, cleaning wells, granolithic and asphalt pavement, surface treatment, road and construction and erection of guard boxes. Owners taking bids due January 29th at noon.

**Sewers, etc.**, Philadelphia. Owners, Depart-

ment of Public Works, Bureau of City Property, 216 City Hall. Test boring for sewers and bridges. Owner taking bids due January 29th at noon, 216 City Hall.

**Bungalow**, near City Line, Montgomery County, Pa. Architect, M. Capobianco, 721 Walnut street, Philadelphia. Owner, Jennaro Schabo, 1311 McKean street, Philadelphia. Frame and stucco, 1½ stories, 26x42 feet, asbestos shingle roof, pine floors, hot water heat, electric light. Plans completed. Architect and owner taking sub-bids.

**Store and Storage Houses (2)**, Tenth and Christian streets, Philadelphia. Architect, M. Capobianco, 721 Walnut street, Philadelphia. Owner, Anthony Fiumario, 902 South Tenth street, Philadelphia. Brick, 3 stories, 38x32 feet, slag roof, pine floors, electric light, metal bulks, plate glass. Plans in progress.

**Residence and Garage (2)**, Sedgwick avenue, Germantown, Pa. Architect, George S. Idell, 1705 Chestnut street, Philadelphia. Owner, name withheld. Brick, stone, concrete block, plastered, 2 stories, 32x39 feet, 1 story, 10x16 feet, slate roof, hardwood, linoleum, composition cement floors, electric light, hot water heat, tile work. Architect ready for bids in 10 days.

**Building (alts.)**, Northeast Corner Eighteenth and Vine streets, Philadelphia. Architect, J. Frank Clark, 23 South Sixteenth street, Philadelphia. Owner, Dr. J. Clarence Fitch, care of architect. Carpentry and mill work, brick work, plastering, painting and glazing, tile and marble work (heating, electric and plumbing reserved). Architect taking bids due January 25th.

**Residence (alt. and add. to 6 apartments)**, 5528 Wayne avenue, Philadelphia. Architects, R. R. Neely and E. W. Martin, 2301 Spruce street, Philadelphia. Owner, name withheld. General alterations, steam heat, electric light, tile work, hardwood and composition floors, incinerators. Plans in progress.

**Factory**, 312-316 New street, Philadelphia. Architect, Herman H. Kline, Bulletin Building, Philadelphia. Owners, J. Kopperman & Son, 309 Florist street, Philadelphia. Concrete and steel, slow burning, 3 stories, 55x84 feet, slag roof, plank floors, steam heat, electric lighting. Plans in progress.

**Office Building (alts. and add.)**, Southeast

Corner Eighth and Chestnut streets, Philadelphia. Architect, William L. Charr, 149 South Fourth street, Philadelphia. Owner, care of architect. Brick, steel, 4 stories, 22x98 feet, slag roof, metal lath, hot water heat, electric light, marble work, demolition, hollow metal skylights, bond, metal bulks, terra cotta, metal ceilings, metal lath. Plans in progress.

**Alterations and Additions**, 2945 Diamond street, Philadelphia. Architect and engineer, M. M. Bonnin, Northeast Corner Eighth and Porter streets, Philadelphia. Owner, name withheld. New metal bulk front, slag roof, pine floors, carpentry and mill work, painting and glazing, plastering, cement work, plate glass, marble work, electric light. Architect taking sub-bids due as soon as possible.

**Residences (52)**, Cresheim Road, Weideman and Idell street, Philadelphia. Architects, MacKenzie & Wiley, Liberty Building, Philadelphia. Owner, Eugene Tourison, Jr., 1310 Arch street, Philadelphia. Stone, brick and stucco, 2 stories, 20x30 feet, slag and slate roof, hardwood floors, tile work, hot water heat, electric light, garages in basement. Owner ready for sub-bids.

**Hospital (alts. and add.)**, Allegheny and Tulip street, Philadelphia. Architect, Edward Yeo, 225 Sydenham street, Philadelphia. Owners, Northeastern Hospital, on premises. Brick, concrete and steel, 3 stories and basement, 40x45 feet, slag roof, cement floors, safety treads, iron work, bond, rolled steel sash, tile and marble and terrazzo work, metal lath. Architect will take new bids in one week.

**Synagogue**, Forty-first and Viola streets, Philadelphia. Architect, Abraham Levy, 1208 Real Estate Trust Building, Philadelphia. Owners, Tikvas Israel Congregations, on premises. Brick, steel, artificial stone, granite, 2 stories, 57x112 feet, steam heat, electric light, tile and marble work, oil burning equipment, slag roof, maple floors, mill work, leaded glass, art cement, sheet metal work. Architect will be ready for general bids in a few days.

**Stores (4)**, **Residences (43)**, Eleventh, between Olney and Chew streets, Philadelphia. Architects, R. R. Neely & E. William Martin, 2301 Spruce street, Philadelphia. Owners, Zerbey & Holloway, 4713 North Broad street, Philadelphia. Brick, 2 stories, 47x16 feet, 40x16 feet, slag and tile roof, pine floors, hot water heat, electric light, tile work, copper bars, leaded glass, flush bulks. Owners taking sub-bids.

**Garage and Service Station**, 4648-50 Umbria street, Manayunk, Philadelphia. Architect, Frank V. Nickels, 15 South Twenty-first street, Philadelphia. Owner, Howard F. Righter, on premises. Brick, stone, concrete, steel, stucco, 1 and 2 stories, 50¾x91½ feet, slag roof, cement floors, steam heat, electric light, plumbing. Owner ready for general bids.

Man and the giraffe are the only two living things that can't swim naturally. Throw a day-old kitten into the Mississippi and it will paddle its way to shore. The giraffe can't swim because he's not built that way. Man can't swim, just because he is afraid. The chances are that the reason you are not in the swim—financially or otherwise—is because you are afraid.—Glen Buck.

**Apartment (alts. and add.)**, 117 Winsor street, Reading, Pa. Architect, G. C. Freeman, Liberty Bank Building, Reading, Pa. Owner, N. K. Simmons, care of architect. Brick, 3 stories, tin roof, electric light, tile work, partition work, general interior alterations. Plans in progress.

**Residence (alts.) to Apartment**, 127 Spring street, Reading. Architect, Calvin Young, 226 North Sixth street, Reading, Pa. Owner, Mrs. A. S. Potteiger, on premises. Brick, 2 stories, 37x17 feet, tile roof, pine floors, steam heat, electric light. Plans in progress.

**Church**, Kingston, Pa. Architect, T. H. Hamilton, Patriot Building, Harrisburg, Pa. Owners, Church of Christ, C. H. Freck, Kingston, Pa. Brick, stone, 1 story and basement, 70x90 feet, composition roof, hardwood floors, hollow tile, vapor heat, electric light, metal lath. Plans in progress.

**Residence**, Bellevue Park, Harrisburg, Pa. Architects, Johnson & Starr, Spooner Building, Harrisburg, Pa. Owner, Captain J. Smith, care of architects. Brick, 2½ stories, 30x44 feet, slate roof, hardwood floors, vapor heat, electric light, tile work. Plans in progress.

**Residence**, Penn Side, Reading, Pa. Architect, Earl Hickman, 119 South Fifth street, Reading, Pa. Owner, H. E. Printz, Mt. Penn, Reading, Pa. Hollow tile, stucco, 1 story, 37x51 feet, tile roof, tile and marble work, electric light, hot water heat, plate glass, ornamental iron work. Plans in progress.

**School**, Jersey Shore, Pa., \$200,000. Architects, Lawrie & Green, Commonwealth Building, Harrisburg, Pa. Owners, School Association of Borough of Jersey Shore, C. E. Peterson, secretary, Jersey Shore, Pa. Brick, 2 stories. Architects selected.

**School (add.)**, Swarthmore, Pa. Architects, Simon & Simon, 249 South Juniper street, Philadelphia. Owners, Board of Education, Borough of Swarthmore, Pa. New plans in progress. Will be ready for bids in 6 weeks.

**Residence and Garage**, College avenue and Golf House Road, Haverford, Pa. Architects, MacKenzie & Wiley, Liberty Building, Philadelphia. Owner, Frank Mahan, Ardmore, Pa. Stone, building block and stucco, 2½ stories, 120x26 feet, slate roof, hardwood floors, oil burning equipment, hot water heat, electric light, tile work. Owner building and subletting.

**Residence**, East Willow Grove avenue, Chestnut Hill, Pa. Architect, Andrew C. Borzner, 717 Walnut street, Philadelphia. Owner, Pierce Myers, care of architect. Stone, 2½ stories, 43x40 feet, hot water heat, electric, tile work, shingle roof, hardwood floors. Plans in progress.

**Church**, Camp Hill, Pa. Architects, Lawrie

## CHAPMAN SLATE CO.

**BETHLEHEM, PA.**

**ROOFING SLATE EXCLUSIVELY**

**The Only Manufacturers of Genuine Chapman Slate**

& Green, Commonwealth Building, Harrisburg, Pa. Owners, Presbyterian Church, care of architects. Stone, 1 story and basement, 100x100 feet, slate roof, concrete and cork tile floors, steam heat, electric light, metal lath, tile work. Architects ready for bids.

**High School**, St. Mary's, Pa. Architects, Lawrie & Green, Commonwealth Building, Harrisburg, Pa. Owners, St. Mary's Borough School Board, E. G. Beck, secretary, St. Mary's, Pa. Brick, steel, 2 stories and basement, 165x88 feet, composition roof, composition and hardwood floors, roof ventilators, waterproofing, terra cotta (heating, electric and plumbing reserved), metal lath, rolled steel sash, kalamein doors, bond, iron stairs, ornamental iron work. Architects ready for bids.

**Store Building (alts. and add.)**, Lancaster, Pa. Architect, C. E. Urban, Woolworth Building, Lancaster, Pa. Owners, Watt & Shand, 2 East King street, Lancaster, Pa. Brick, steel, 4 stories, slag roof, steam heat, electric light, rolled steel sash. Plans in progress. Architect will be ready for bids in two weeks.

**School**, Strasburg, Pa. Architect, H. Y. Shaub, Imperial Building, Lancaster, Pa. Owners, Strasburg School Board, Mr. Stauffer, secretary, Strasburg. Brick, 2 stories, 40x60 feet, slate roof, maple floors, steam heat, electric light. Revised plans in progress. Will be ready for bids February 15th.

**Garage**, rear of 113 South Fifth street, Reading, Pa. Architect, Earl Hickman, 119 South Fifth street, Reading, Pa. Owner, Charles C. Miller, on premises. Brick, steel, 2 stories, 30x80 feet, composition roof, concrete and wood floors, roof ventilators, steam heat, electric light, rolled steel sash, fire doors. Owner will sub-let.

**Residences (pair)**, Stoney Creek Mills, Berks County, Pa. Architect, Earl Hickman, 119 South Fifth street, Reading, Pa. Owner, C. D. Wentzel, Stoney Creek Mills, Pa. Frame, stucco, 2 stories, 24x48 feet, shingle roof, pine floors, hot air heat, electric light. Owner will build.

**School**, Steelton, Pa. Architects, Johnson & Starr, 9 North Second street, Harrisburg, Pa. Owners, St. Peter's Parish School, Rev. L. Gladek, Steelton. Brick, 2 stories, 36x74 feet, slag roof, pine floors, roof ventilators, metal lath (heating, plumbing and electric work reserved). Architects will be ready for bids in two weeks.

**Church**, Pine street, Harrisburg, Pa. Architects, Cram & Ferguson, Pittsburgh, Pa. Associate architects, Starr & Johnson, Spooner Building, Harrisburg, Pa. Owners, Pine Presbyterian Church, Dr. A. Cherry, 315 North Front street, Harrisburg, Pa. Stone, 3 stories, slag roof, hardwood floors, electric light, tile work. Architects will be ready for bids in two weeks.

**Sunday School**, Kingston, Pa. Architect, Lester Davis, 616 Spruce street, Scranton, Pa. Owners, Westmoor Church of Christ, Rev. George W. Woodmar, 65 Loveland avenue, Wilkes-Barre, Pa. Frame and stucco, 2 stories and basement, 65x85 feet, tile roof, steam heat, electric light, composition floors, hollow tile, roof ventilators, metal window guards, tile work, metal lath, floor hardener, iron stairs, ornamental iron work. Will be ready for bids March 15th.

**Residence and Garage**, Drexel Hill, Pa. Architect, Charles M. Talley, Telford, Pa. Owner, Nieman Hower, 97 East Baltimore avenue, Lansdowne, Pa. Stone, terra cotta tile, frame, 2½ stories, 46x26 feet, 1 story, 20x20 feet, slate roof, hardwood and cement floors, hot water heat, electric light, tile baths (2), plumbing. Owner ready for bids in a few days.

**Office (alts. and add.)**, Telford, Pa. Architect, Charles M. Talley, Telford, Pa. Owner,

Dr. J. H. Hedrick, Telford, Pa. Frame, 2 stories, 41x25 feet, hot water heat, electric light, slate roof, pine floors, cement and stone work. Owner taking bids due as soon as possible.

**Residence and Garage**, Drexel Hill, Pa. Architect, W. E. Hance, 2301 Spruce street, Philadelphia. Owner, L. Stewart, Drexel Hill, Pa. Stone and stucco, 2½ stories, 30x42 feet, 1 story, 18x18 feet, slate roof, hardwood and cement floors, hot water heat, electric light, tile work. Architect will be ready for bids in one week.

**Bank (alts.)**, Ninth and Walnut streets, Reading, Pa. Architect, Harry Maurer, 234 North Fifth street, Reading, Pa. Owners, Penn Trust Co., H. B. Hagy, president, Ninth street, Reading, Pa. General interior alterations, copper work, tile and marble work, terrazzo floors. Plans in progress. Owners will sub-let.

**Bungalow**, Temple, Pa. Architect, Earl Hickman, 119 South Fifth street, Reading, Pa. Owner, Charles Potteiger, Sixth and Washington streets, Reading, Pa. Frame, 2 stories, 25x27 feet, shingle roof, hardwood floors, electric light, metal lath. Revised plans in progress. Owner will build.

**Show Room**, Minersville, Pa. Architect, G. C. Freeman, Liberty Bank Building, Reading, Pa. Owner, S. E. Noel, Minersville, Pa. Hollow tile and brick, 2 stories, 50x1150 feet, slag roof, pine floors, steam heat, electric light, rolled steel skylights, fire doors. Architect ready for sub-bids.

**Residence (remodeling)**, Elkins Park, Pa. Architect, Abraham Levy, 1208 Real Estate Trust Building, Philadelphia. Owner, Alex. Lieberman, 211 South Fifteenth street, Philadelphia. General remodeling. S. H. Levin, 1631 South Fifth street, will be general contractor. Plans not yet started.

**Residence**, Overbrook, Pa., \$50,000. Architect, P. H. Heald, 275 North Lansdowne avenue, Lansdowne, Pa. Owner, Arthur H. Hadley, Liberty Building, Philadelphia. Stone, 2½ stories, electric light, tile work, hardwood floors. Plans in progress. Architect and owner will take bids in one week.

**Residences (3)**, Ardleigh street, North Mermaid avenue, Chestnut Hill, Pa. Architect, Paul Livingstone Boyd, 6943 Limekiln Pike, Philadelphia. Owner, A. K. Schook, 45 Graver's Lane, Chestnut Hill, Pa. Stucco, brick, stone, 2½ stories, 54x47 feet, slate and slag roof, hardwood floors, hot water heat, electric light. Owner taking sub-bids.

**Stores (2), Apartment**, Conshohocken, Pa. Architects, MacKenzie & Wiley, Liberty Building, Philadelphia. Owner, William H. Baldwin, 110 Fayette street, Conshohocken, Pa. Brick, 2 stories, 40x80 feet, slag roof, hardwood floors, steam heat, electric light, tile work, metal ceilings, plate glass, flush bulks. Plans about completed. Owner will take bids.

**Residences (2)**, Harper's Tract, Jenkintown, Pa. Architect, private plans. Owner, Dr. E. N. Quinn, Jenkintown, Pa. Brick, frame and pebble dash, 2½ stories, 26x40 feet, slate roof, hardwood and pine floors, hot water heat, electric light, tile work. Owner taking bids due January 28th.

**Bakery**, 528-30 Moss street, Reading, Pa. Architect, Earl Hickman, 119 South Fifth street, Reading, Pa. Owner, E. J. Faller, on premises. Brick, steel, 2 stories, 40x100 feet, composition roof, maple floors, freight elevator, roof ventilators, fire doors, galvanized iron skylights, rolled steel sash, metal lath, steam heat, electric light. Owner ready for bids due January 30th.

**Bungalow**, Reiffton, Pa. Architect, Earl Hickman, 119 South Fifth street, Reading, Pa. Owner, P. J. Arnold, Reading, Pa. Cinder block, stucco, 1 story, 33x37 feet, factory stained shingle roof, pine floors, hot water heat, electric light, tile work. Owner taking

bids due January 26th.

**Summer Home for Children**, Westtown, Pa. Architects, Gleason Mulrooney & Burke, 404 South Broad street, Philadelphia. Owners, Society of St. Vincent de Paul, 1608 North Twenty-first street, Philadelphia. Brick, cut stone, steel, 2 stories and basement, 207x43 feet (plumbing, electric reserved), slag and canvas deck roof, cement floors, hollow tile, roof ventilators, shoring, waterproofing, ornamental iron work and stairs, bond, rolled steel sash. Architects taking bids due January 24th.

**High School**, Emporium, Pa., \$90,000. Architects, M. E. Kressley Co., 13 North Fourth street, Harrisburg, Pa. Owners, School Board of Emporium, George Metzger, Jr., secretary, Emporium, Pa. Brick, frame, 2 stories and basement, composition roof, hardwood floors, hollow tile, electric light, roof ventilators, fire doors, iron stairs, ornamental iron work. Architects taking bids due January 29th.

## Pennsylvania Contracts Awarded

**Building**, 122-28 North Tenth street, Reading, Pa. Architect, Earl Hickman, 148 North Fifth street, Reading, Pa. Owners, Catholic Literary and Social Union, on premises. Brick and stone, 3 stories, 60x115 feet, composition roof, maple floors, roof ventilators, waterproofing and dampproofing, terra cotta coping, vapor heat, electric light, metal lath, marble work, fire doors. Contract awarded to Charles H. Schlegel, Reading, Pa.

**Henry Hauck School**, Lebanon, Pa. Architects, Riteher & Eiler, 147 North Fifth street, Reading, Pa. Owners, Lebanon School Board, Lebanon, Pa. Brick, reinforced concrete, cast stone, steel, 2 stories and basement, 247x78 feet, wing 57x70 feet (plumbing, heating, electric reserved), tile roof, composition cork, tile and cement floors, maple floors. Contract awarded to J. H. Greiner & Co., Lebanon, Pa., \$213,000.

**Rectory**, Ringtown, Pa. Architect, G. C. Freeman, Liberty Bank Building, Reading, Pa. Owner, Rev. P. J. Dougherty, on premises. Frame, 3 stories, 41x35 feet, slate roof, hardwood floors, tile work. Contract awarded to E. Basstress, Mt. Carmel, Pa.

**School**, Springhouse, Montgomery County, Pa. Architect, G. Edwin Brumbaugh, Real Estate Trust Building, Philadelphia. Owners, Lower Gwynedd Township Board of Education, Montgomery County, Pa. Brick, cement block, 1 story, 167x67 feet (plumbing, heating, electric reserved), slate roof, maple floors, metal lath, tile and marble work, bond, ornamental iron work. Contract awarded Roy Randall, Jenkintown, Pa.

**School**, Brockport, Pa. Architects, M. E. Kressley Co., 13 North Fourth street, Harrisburg, Pa. Owners, Horton Township School Board, F. W. Jackson, Shawmont, Pa. Brick, 1 story, 130x70 feet, composition roof and floors. Contract awarded to W. H. Cramer Const. Co., Emporium, Pa.

**Residence (alts.)**, 18 Jefferson street, Media, Pa. Architect, C. H. North, 1709 Sansom street, Philadelphia. Owner, Frederick W. Breiting, 18 Jefferson street, Media, Pa. General interior alterations, brick, plastering, painting, plumbing, heating system repairs, electric wiring and fixtures. Contract awarded William D. North, Norwood, Pa.

**Apartment (alts. and add.)**, 384 Penn street, Reading, Pa. Architect, G. C. Freeman, Liberty Bank Building, Reading, Pa. Owner, Oscar Miller, care of architect. Frame, 3 stories, pine floors, general alterations, tile work, partitions. Contract awarded to D. H. Hunter, 820 North Eleventh street, Reading, Pa.

## New Jersey Construction News

**School**, Robbinsville, N. J. Architects, W. W. Slack & Son, St. Regis Building, Trenton, N. J. Owners, Washington Township School Board, Miss Hepburn, Winslow, N. J. Brick, 4 rooms. Too early for details.

**School (add.)**, Florence, N. J. Architects, P. L. Fowler Co., Fitzcharles Building, Trenton, N. J. Owners, Florence School District, E. Robbins, Florence, N. J. Brick, 2 stories. 12 rooms and auditorium, slate roof, maple floors, hollow tile, safety treads (heating, plumbing and electric work reserved), metal lath, tile work, bond, iron stairs. Owners will be ready for bids in a few days.

**Dining Hall No. 2**, Morris Plains, N. J. Architects, Department of Institutions and Agencies, Division of Architecture and Construction, Trenton, N. J. Owners, Board of Managers, State Hospital, Morris Plains, N. J. **Grade School**, Elkton, Md. Architect, C. R. Hope, DuPont Building, Wilmington, Del. Owners, Cecil County School Board, H. Caldwell, secretary, Elkton, Md. Brick, 2 stories, 40x80 feet, slag roof, pine and composition floors. Owners ready for bids.

(Continued from page 52)

a comparatively easy matter in most cases to plan a structure that will meet these conditions. When finding out just what the town's requirements are in the way of hotel accommodations, it is well to look to the city's future development as well as to its present status—but at the same time, as mentioned in a previous article in this series—it is a poor business policy to incorporate in a new hotel a larger number of rooms than there would seem to be a need for within the next five year period. The point I wish to make in this connection, is that the proportion between the different types of bedrooms, and the number and character of the hotel's public rooms should be based on the most reliable estimates obtainable as to the *types* of hotel-using persons who are coming to the city.

It may be found, for example, that the new hotel will afford the town an opportunity for securing conventions that it never before had. And if this is the case, the new hotel should, of course, be planned in such a way as to accommodate them. If conventions can be anticipated it will, for example, be more than ordinarily important that the hotel have a ball room that is easily convertible into a convention hall.

### *How to Plan the Ball Room*

The question of whether or not to install a ball-room—particularly for the typical 100 to 200 room hotel in the average city or town—is a difficult one. In addition to convention delegates, tourists can be counted on to use such a room during the tourist season, and it should also prove a convenience for the local Rotary and Kiwanis Clubs, as well as for many social gatherings such as balls, weddings, charity drives and the like. In spite of these uses, however, it will frequently be found difficult to keep such a room in use regularly throughout the entire year. The mistake is often made of devoting to the ball room valuable floor space that should be used for other purposes. It is in most cases much more practical to install the ball room on the second floor or on the top floor. Hotel in this connection.

While the year 1923 has witnessed unprecedented developments in the erection of apartment, residential and resort hotels throughout the country, by far the biggest source of income for the average hotel is still the commercial traveler. In nine cases out of ten the owners of the new hotel will find that he is the principal type of guest whom they should aim to please. He comes at all seasons of the year and adverse business conditions affect his travel very much less than that of tourists and pleasure seekers. These remarks do not mean, however, that the management of the new hotel should aim to cater to the traveling salesman alone, for it is easily possible to erect a building that embodies features appealing to him, to tourists and to the townspeople—the latter more particularly insofar as residence quarters and public rooms are concerned.

In the enthusiasm of starting the new hotel, the stockholders and board of directors are frequently inclined to overshoot the mark both as regards the size of the bedrooms and the number of unnecessary elaborate treatment of the public rooms. Particularly are they inclined to incorporate too many large and spacious bedrooms. This is where the experience of the prospective lessee will prove of special value.

#### *Keeping Bedrooms Within Reasonable Limits*

Early in hotel history it was considered a good plan to scatter a liberal number of big impressive bedrooms all through the hotel. It then dawned on a manager who has since become famous for the economy of space with which his hotels are planned that this idea did not make for uniformity and was consequently extravagant.

The next development for providing the larger rooms that tourists like was that of placing them all on one floor. This was soon found unsatisfactory because of the desire on the part of some hotel guests to be near the ground while others wanted to be higher up. Furthermore, it did not obviate the disadvantages and additional cost that come with a plan which fails to provide for uniform floors throughout.

Modern hotels are now built in such a way that the larger guest rooms are provided one above the other on all the floors—and on the average there are fewer big rooms per floor than formerly. This results in a uniform floor plan that is economical from a structural standpoint and that also serves the guests' best convenience.

For the typical hotel in a city 20,000 to 50,000 population, and where a survey shows that the patronage will be chiefly commercial in character, I would recommend the following sizes for bed-rooms:

Court rooms—from 9½ to 11 feet

wide by 14 to 15 feet deep.

Rooms on street frontages—10½ to 12½ feet wide by 16 feet deep.

Corner rooms—13 to 14 feet wide by 16 feet deep.

The best height ceiling for a hotel of this character is one that measures 9½ feet from floor to floor.

#### *The Advantages of Building Rooms En Suite*

Tourists usually demand somewhat larger and more elaborate accommodations than do traveling men and corner rooms en suite of the above dimensions will usually appeal to them. It is also frequently possible to rent some of these corner rooms to residents in the city on 6 or 12 months leases. This is a very desirable type of business—particularly at the start—for it furnishes the management with a definite amount of steady income that can be counted on in advance. Later on, when the hotel gets to the point where it is filled nearly every day, it should prove more profitable to sell these rooms by the day; as the rates on a long term rental are, of course, somewhat lower than those made on a daily basis. In order to meet the requirements of tourists and city residents, corner rooms should be so planned that they may be utilized as suites by opening up the rooms on either side of them—the corner room itself being used as a sitting room in the day time and a bedroom at night.

The question as to how many double rooms the new hotel should provide can best be handled by furnishing all the street front and corner rooms with twin beds and making an additional charge for double occupancy. The court rooms should be furnished with beds 4½ feet and an additional charge for double occupancy should be made here also.

Considerable misunderstanding is prevalent both among hotel men and the traveling public as to the cost of installing and operating a shower bath as opposed to a tub bath. Where the former is properly installed, it will cost at least as much as a bath tub and many hotel managers will tell you that it is more expensive to operate a shower than a tub. The public, however, has the impression that less should be charged for a room with shower than one with bath, and consequently traveling men who are trying to economize on their hotel accommodations demand the former. In my opinion no reduction in rates should be made for such rooms, but inasmuch as some hotel patrons do actually prefer them regardless of the rate, from 10 per cent. to 15 per cent. of the court rooms should, I believe, be equipped with showers.

#### *Fixing the Number and Location of Sample Rooms*

The matter of determining how many sample rooms to include in the new hotel

is also a trying one, for during a large part of the year these areas are non-productive and their number should therefore, be kept to the lowest possible minimum with which the management can "get by" without incurring the commercial traveler's ill will. The merchant members of the board of directors should be consulted when it comes to deciding how many of these rooms to include and a survey should also be made of the sample room facilities offered by the other hotels in the city. If there already are an unusually large number of such accommodations in these it may be found that the new hotel's interests can be served most effectively by omitting sample rooms entirely and by dispensing with this type of commercial travel in order to devote this space to additional bedrooms.

Sample rooms should always be planned with a view to utilizing them as bedrooms—built-in folding beds can be easily installed at the time the hotel is erected, and cots may be kept on hand for use at the time of conventions. They should be placed as near the freight elevators as possible, for the problem of getting merchandise in and out of them is frequently a difficult one.

#### *The Practical Planning of Public Rooms*

When it comes to planning the new hotel's public rooms in such a way as to meet the city's needs, the first and foremost requirement in any modern hotel is a lunch room or coffee shop. This should be given the best store location on the ground floor that is accessible to the kitchen service. It has been proved time and again, from actual operating records, that a lunch room or coffee shop will bring in considerably more revenue than could be had from the space it occupies if leased out as a store. A room of this kind attracts a great deal of business from townspeople as well as from certain classes of commercial travelers and tourists.

The kitchen and main dining room should be placed either on the lobby floor level or slightly above it. Easy, convenient access (preferably by means of a ramp) should be provided between the kitchen and the coffee shop.

The matter of accommodating local business and social clubs that are always glad to patronize the new hotel will to a considerable extent determine the size and number of private dining rooms. It is best to ascertain in advance how many organizations of this character the hotel can count on. If several such groups will agree to patronize it, the private dining rooms should be planned so that they may be turned into one big room for larger functions—and also bear in mind the fact that they should be reasonably near the kitchen.

Except in isolated cases, I believe it a mistake for a modern hotel that is primarily commercial in character to provide

a roof garden. The popularity of rooms of this character is on the wane, and because of their distance from the kitchen they are expensive to operate, for not only the food and garbage but also the employees and guests must be transported from the main floor to the room and back. The exception to this general rule is that of hotels in hot climates where such rooms are in continual use all year 'round, where they are unusually popular because of their coolness and the view they afford.

As I said at the outset of this article, the most important factor in fitting the new hotel to the city's needs is to analyze those requirements accurately before the hotel is planned and to then design the hotel in such a way that it will meet those requirements conservatively. It is always safer to under-build rather than to over-build—and, to apply that same principle to this particular discussion, it is safer to underestimate the number of large bedrooms and the number of public rooms that should be incorporated than to over-estimate them.

#### COST OF HOME IN PROPORTION TO INCOME

BY MAURICE I. FLAGG

*Director of Service*

*The Architect's Small House Service  
Bureau of the United States*

If it is good business to build houses and rent them to other people there must be a profit in it.

Consequently, when you build your own home you may expect to find it a profitable venture, provided you build economically—spending enough to secure sound and durable materials but not too much for your income. A great deal, however, depending on financing, and therefore when you think of building a home, ask yourself this fundamental question, "How much can I afford to put into a home?"

The easiest way of settling this question is on a basis of the rent you are accustomed to pay. Budget experts say that one-fourth to one-fifth of the average income should be spent on rent. It is probable that you can afford to invest one-fourth, possibly more, of your income in payments for a home of your own. As a result of these payments you eventually possess a warranty deed and enjoy complete ownership.

The portion of your income which you are justified in spending on building depends on two factors; first, what is your income? Second, how much can you save each month after deducting living expenses? Consider carefully whether you can lay aside more than your rent and if so, how much over and above this amount. It is a serious mistake and a common cause of trouble to attempt financing a home beyond the limits of your income.

Experts on home building consider that you may feel reasonably secure in building a home on which you can complete payments in about fifteen years. This means that if you have already saved one-fifth of the value of your home—a wise precaution—you should be able to pay the balance in about twelve years.

For example: in the case of a small home costing \$5,000, one-fifth would be \$1000. To pay the balance or \$4000 in twelve years, would require 144 monthly payments. Payment on the principal, therefore, amounts to nearly \$28.00 a month. Interest at the rate of 6% would make the first payment \$20.00. Adding about \$14.00 a month to cover insurance, taxes, and upkeep gives a total of \$62.00 a month. In a similar way you can easily figure out how much you can afford to pay towards a home, and whether you can afford a \$5,000 home or a more expensive one.

This is just an illustration, but it shows a way to determine for yourself how expensive a home you can afford to build. While all you have to show after you have lived in another man's house is a rent receipt, when you put money into a home of your own, you secure something tangible. When you own a home you possess property, you can borrow money on that security whenever you need it, and you are well on the road to independence.

Such a condition, however, exists only when the title is clear, when the owner has built a home that he can really afford. And after you have determined how much you can afford, the next problem is financing.

#### STABILITY IN THE CONSTRUCTION INDUSTRY

Labor does not gain if extremely high wages are offset by prolonged periods of unemployment; nor do owners, real estate men, and builders gain under a system which gives a higher unit cost of building and a decreasing return on investment. Continuity in the long run serves the common interest.

One would imagine from the amount of space devoted to "Training More Apprentices," that this is the one and greatest obstacle that stands between the builders and Promised Land. But there would be little gained in stabilizing the labor supply without stabilizing other factors. To find enough labor to supply an abnormal demand would be merely to intensify future unemployment and to emphasize every undesirable feature in the business cycle.

It is as important to avoid a labor surplus as to remedy a trade labor shortage. We have heard enunciated lately the assertion that every economic and industrial problem has its one best method of solution.

Surely the building industry and the

men engaged in the various forms of contract construction have reached a stage in the development of their local and National Associations where they can see the impropriety of training enough men to fill all positions at the peak of demand for construction.

The National Association of Builders' Exchanges does not only subscribe to the theory that Vocational Education is the only solution to the problem of the high cost of building construction. True it is, that the establishment of vocational schools may act as a stop-gap to higher construction figures, but the crux of the situation lies not in training more bricklayers and plasterers, but in utilizing those already in the industry over a lengthened building season. Spread the building peak over a longer period of time each year and we can get along without the several thousand less building craftsmen, who statisticians say, have dropped from the industry within the last ten years.

Much in the solution of the problem of seasonal occupation lies with the individual contractor but it is essential that the National Association strike the keynote and awaken the consciousness of the industry to the essential method of procedure.—*National Builders' Bulletin*.

#### AN URGENT NEED FOR STABILIZATION

The economic loss that is produced by any industry that is mainly a seasonal one is self-evident; therefore, it behooves every one in the building industry to promote an educational campaign to offset the general belief that this industry is one that can proceed only in fair weather.

Briefly, winter construction appears to offer economies by (1) spreading overhead costs over twelve producing months instead of some less period; (2) reducing the seasonal employment of men in construction and the allied industries; (3) ironing out the peak in the curve of production of construction materials and equipment; (4) equalizing the demand on transportation agencies.

The economic waste in all of these activities, due to reduction of construction during cold weather, is universally admitted as a general truth, but there are no determined figures of the amount of waste. This data is what research is called upon to supply.

The reasons that such data is necessary are: 1. The construction industry is the servant of the building public and evidence of specific savings is necessary to induce the building public to alter its practices.

2. Without full knowledge of the economic waste from winter idleness, the industry hopes to stabilize its own business or assume the duty, which it must, of teaching the building public.

## As The Editor Sees It

### WINTER OPERATION

*Address delivered by Alfred S. Alschuler, Architect, Chicago, at Fifth Annual Meeting of the Associated General Contractors of America, La Salle Hotel, Chicago, Ill., Jan. 23, 1924.*

**B**UILDINGS are constructed not only of brick and steel and wood, but with every bit of mortar there is mixed a certain amount of sentiment; a dream long visioned to be materialized; a vision long anticipated fully realized.

For it is this human hope and ambition to own a home to shelter one's family, to provide meeting places where human beings may gather for mental or spiritual improvement, or to house growing industries in which all one's energies are centered—it is for the realization of such hopes and dreams that buildings are transformed from visions into substance.

All this may at first glance seem to be entirely foreign to the subject of this paper, but upon further thought, you will realize that this hope and sentiment which plays such an important part in human affairs is after all, affected and influenced, not only by material considerations, but largely by what we are pleased to call "Psychological Conditions."

The man who has been saving for years to build a home for his family or for his industry usually puts off the final decision to act until his mind is made up—or to put it in other words, until the mood strikes him.

It is hardly necessary to state that such

moods in human beings follow closely other natural phenomena and that Spring is the most likely and Winter the least natural time for such moods to be brought about and decisions reached. There is daily evidence of such moods easily corroborated by all salesmen who prefer to solicit a customer in sunshiny weather and would save their efforts on dark or gloomy days. So it is this psychological aspect which must be considered in trying to overcome the prejudice against and inertia toward Winter operation.

I have made an analysis of various charts showing monthly operation over a period of years and have assembled this information in a new chart. This chart indicates the average monthly operation over a period of years in the larger cities of the United States which are influenced by climatic conditions. This chart represents a very large percentage of the work done in the United States and clearly indicates a season of tremendous activity from March first to October first, a gradual decline for October and November and a sharp decline for December, January and February. It is unnecessary to state the tremendous disadvantages arising therefrom and affecting both capital and labor where such seasonal operation exists and the desirability of overcoming this as far as possible. This condition varies considerably according to climate, but for present purposes, I have assumed a belt or zone including

Chicago and New York under which conditions a very large proportion of the building operations of this country are carried on.

To go into this subject extensively would require a careful analysis of each group or class of buildings, as each group is subject to slightly different influences. I will, however, consider them briefly as follows:

Office building projects in some cities are influenced largely by the fact that they must be ready for May 1st renting or else suffer vacancies for a considerable period. To meet this condition usually compels the starting of large operations about May 1st, carrying on at a top speed through the Summer and Fall to enclose the building at the earliest possible date and then the carrying on of all interior work during the winter months. This class of building provides work substantially over the entire year. There is not much latitude permitted in the starting of such operations unless other renting conditions prevail. Even under other rental conditions this class provides practically an all year occupation, as it takes substantially a year to complete such structures if they are of any considerable size.

Places of amusement which furnish much work are usually desired for completion in time for Fall opening. These therefore depending on their size, must start either in early Spring or the preceding Fall and carry on right through the

Winter, so that this class as well as office buildings should normally provide a considerable amount of Winter work.

Public works and utilities furnish a class of work which should not be influenced by seasonal activities and which should be used as a reservoir to draw upon both in times of building depression and if required during boom periods, should be carried on during the least busy months. This would surely benefit all parties concerned. The public owning the buildings or paying revenue for their support would profit by reduced building cost. Contractors and workmen would gain by being occupied during the Winter months and the building public would further profit by having that much less work thrown into the Summer months.

Apartment houses are to a large extent built by a class known as "Speculative Builders" on small margins of capital and must be turned out for completion just prior to the renting season. If May 1st is the most popular renting date, I believe starting in Fall and going on through the Winter would be both possible and highly profitable. Where no fixed rental date exists, a campaign of education for Winter building might be effective.

Residences are very largely influenced by the mood of the builder and I believe something could be done here to offset the popular prejudice against Winter building.

I have left until last, the group of industrial buildings with which I happened to be most familiar. In the past, this was subject to the same influence as above mentioned, but within the past five years, I have noticed a considerable change of attitude. With the rapid expansion of business certain owners have decided to expand to meet the pressure regardless of the time of year. Others having seasonal business of their own have been compelled to plan to move according to their business needs. Still others planning new buildings fitted to their requirements in order to reduce their operating costs likewise seek in the face of high building costs to take advantage of every possible opportunity to keep down their investment. These classes, I believe, are rapidly growing and the result in my office at least has been a steady increase of Winter work. It is here that a large opportunity is afforded for education, showing the advantage of Winter operations.

To accomplish this, it is first necessary to overcome existing prejudices. These are mainly the established fear of damage particularly in reinforced concrete buildings resulting from cold, and the thought of decreased labor efficiency or increased cost resulting therefrom. That there is some ground for this assumption

is understood. The developments and improvements in method of construction in recent years are not generally understood. For example the class of reinforced concrete buildings are probably more affected by cold than any other kind of construction. And yet they are being carried on more and more and without harm.

You gentlemen as contractors, are familiar with the numerous methods by which materials are heated and by which the form work and reinforcing steel is cleared of ice and snow during the Winter months and it is not my intention to go into the numerous details of these provisions. One feature, however, which has been used on several of our concrete buildings of especial interest is the use of the form work for the floor above that which is being poured as a protection over the concrete. By standing the 4x4 uprights on wedge shaped concrete blocks which rest on the form of the slab to be poured, the forming for the next floor above can be practically completed. In case of heavy snow or rain, tarpaulins laid over this form work give a watertight protection, as well as enclosing the space for temporary heating. By these methods and including the use of chemicals under certain conditions, building operations are facilitated so that except under most severe conditions, work can be carried on without interruption. Although it is necessary to prepare and provide all necessary precautions, it frequently is the case that Winter weather turns out to be mild and no difficulties whatever are encountered. In this case, provided the right kind of contract is entered into both owners and contractors will gain thereby.

During the last Winter, one heavy reinforced concrete structure ten stories in height, containing 16,000 sq. ft. on each floor, through the efforts of an energetic contractor, was carried up from the first floor to the roof in less than seventy total days or sixty actual working days. Another concrete building, the previous Winter, containing 6,000 sq. ft. per floor was carried up twelve floors in one hundred total days. This included bad weather conditions, holidays and some days when work was held back for the lower floor to set; some floors being poured in five working days from the time of completing the previous floor.

My experience leads me to believe that it is largely a matter of contractors. Some overcome all difficulties, whereas others sink under them.

The omission of the top finish and placing this after the building is enclosed and heated greatly expedites work. When this is done, great care must be used to see that the finish adheres thoroughly. This requires considerable skill to ab-

CONTEMPLATED CONSTRUCTION: ARCHITECTS AND OWNERS: COST LIMIT: LAST DAYS FOR FILING BIDS:

CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Bank**, Fifth and Wyoming avenue, Philadelphia. Architects, McLanahan & Bencker, Bellevue Court Building, Philadelphia. Owners, Wyoming Bank & Trust Co., care of architect. Brick, stone, steel, 1 story, 74x80 feet. Plans in progress.

**Bank (add.)**, Ridge and Green Lane, Roxborough, Philadelphia. Architects, Heacock & Hokanson, Bailey Building, Philadelphia. Owners, Roxborough Trust Co., G. C. Littlewood, president, on premises. Limestone, 1 story, steam heat, electric light. Plans completed. Architect will be ready for bids in a few days.

**Hospital Building**, Roosevelt Boulevard and Rhawn street, Philadelphia. Architect, P. E. Johnson, 1713 Sansom street, Philadelphia. Owners, Philadelphia Mystic Shriners, W. Freeland Kendricks, 1337 Spring Garden street, Philadelphia. Brick, stone, steel, 2 stories. Plans completed. Architect ready for bids.

**Home**, 957 West Franklin street, Philadelphia. Architect, Samuel Abramson, 2315 Walnut street, Philadelphia. Owners, Uptown Home for the Aged, on premises. Reinforced concrete, 3 stories, 50x95 feet, slag roof, reinforced concrete and pine floors, hot water heat, electric light, tile work. Plans in progress. Architect will be ready for bids in a month.

**Club House**, Center Philadelphia. Architect, not selected. Owners, Poor Richard Club, B. J. Doyle, president, 239 South Camac street, Philadelphia. Brick, 3 stories, 76x60 feet. Contemplated.

**Apartment House**, Northwest Corner Forty-third and Spruce streets, Philadelphia. Architect and engineer, associate, J. L. Stetler & H. W. Deysher, 1015 Chestnut street, Philadelphia. Owner, name withheld. Brick, steel, cast stone, 4 stories and basement, 74x150 feet (48 apartments), slag roof, oak and composition floors, elevators, roof ventilators, ornamental iron work, kalamein doors, hollow metal skylights, tile and marble work, metal lath, electric light, vapor heat. Plans about completed. Owner will be ready for bids in 10 days.

**Residences (4)**, Shelbourne street, North of Levick, Lawndale, Pa. Architect, William H. Wooters, 816 West Allegheny avenue, Phila-

delphia. Owner, name withheld. Brick and stucco, 2 stories, 16 feet, 4 inches x 39 feet, mill work, plumbing, glazing, etc., hot water heat, electric light, tile work, shingle and slag roof, hardwood and pine floors. Architect ready for sub-bids.

**Residence**, Dicks avenue, West of Sixty-third street, Philadelphia. Architects, Durham Brothers, 1609 Sansom street, Philadelphia. Owner, Samuel Hall, Twenty-sixth and Ritner streets, Philadelphia. Brick, 2 stories, 32x35 feet, hot water heat, electric light, tile work, shingle roof, hardwood and pine floors. Plans completed. Architect ready for sub-bids.

**Residences (14)**, Seventieth and York Road, Philadelphia. Architect, Karl F. Otto, 1828 Arch street, Philadelphia. Owner, Frank D. Williams, Sixty-sixth and Ogontz avenue, Philadelphia. Brick, 2 stories, 20x40 feet, slag, slate and tin roof, hardwood floor, hot water heat, electric light, tile work (2 baths each). Owner ready for sub-bids.

**Store and Office (add. and alt.)**, Northeast Corner Twenty-first and Walnut streets, \$10,000. Architect, Charles Oelschlager, 1615 Walnut street, Philadelphia. Owner, H. Finkel, on premises. Brick, cut stone, 4 stories, 20x12 feet, 20x30 feet. Permit issued. Architect will be ready for general bids in a few days.

**Apartment Hotel**, Northwest Corner Eighteenth and Chestnut streets, Philadelphia. Architect, William L. Redditt, Otis Building, Philadelphia. Owner, name withheld. Brick, limestone, granite, steel, 16 stories, 91x40 feet, slag roof, concrete and oak floors, waterproofing and dampproofing, terra cotta, ornamental iron work and stairs, bond, hollow metal sash, tile and marble work, metal lath, electric light, steam heat. Architect taking sub-bids due as soon as possible.

**Apartment (6) and Stores (alts. and add.)**, Southwest Corner Green and Duval streets. Architect, A. H. Mueller, 901 Walnut street, Philadelphia. Owner, J. Egnal, 5414 Overbrook avenue, Philadelphia. Stone, 3 stories, 26x43 feet, 26x45 feet, vapor heat, electric light, tile work (6 baths), marble work, fire tower, kalamein doors, plate glass, flush bulks, ornamental iron work, ornamental terra cotta, metal ceilings, brick work, hard-

wood and composition floors, slag and slate roof. Owner taking bids due February 14th.

**Loft Building**, 1024-26-28 Buttonwood street, Philadelphia. Architect, J. S. Fuller, 5438 Locust street, Philadelphia. Owner, name withheld. Brick, reinforced concrete, 3 story add., 24x70 feet, slag roof, maple floors, freight elevators, oil burning equipment, fire tower, metal ceilings, kalamein doors, rolled steel sash, steam heat, electric light. Architect will take bids next week.

**Sores (3)**, Twentieth, Limekiln Pike, Cora street, Philadelphia. Architect, J. S. Fuller, 5438 Locust street, Philadelphia. Owner, name withheld. Brick, 1 story and basement, irregular, 29x21x66 feet, 9 inches, slag roof, cement floors (heating reserved), electric lighting, plumbing, metal ceilings, flush bulks, plate glass, ornamental iron work, structural steel. Architect taking general bids next week.

**Apartment House**, 5018 Pine street, Philadelphia. Architects, Huston & Lewis, 1713 Sansom street, Philadelphia. Owner, name withheld. Brick, cut stone, steel, 4 stories, 50x100 feet, slag roof, oak and pine floors, elevators, metal lath, tile work, steam heat, electric light. Architect taking sub-bids.

**Church**, West Manayunk, Pa. Architects, Bureau of Architecture, Methodist Episcopal Church, 1701 Arch street, Philadelphia. Owners, Ashland Methodist Episcopal Church, West Manayunk, Pa. Brick, stone, stucco, 1 story, 52x24 feet (heating and plumbing reserved), shingle roof, pine floors, electric light, metal lath, tile work, ornamental iron work. Architect taking bids.

**Residence**, Queen Lane Manor, Germantown, Pa. Architect, E. B. Gilchrist, 1618 Latimer street, Philadelphia. Owner, Maurice A. Webster, care of architect. Brick, 2½ stories, 50x34 feet, wing 23x20 feet (heating reserved), electric light, tile work, shingle roof, oak and pine floors, plumbing. Architect taking bids due February 2nd.

**Synagogue**, Thirty-third and Diamond and Susquehanna avenue, Philadelphia. Architects, Sugarman, Hess & Berger, 16 East Forty-third street, New York City. Owners, Bnai Jeshurun Cong., care of Morris Hafer, Victory Building, Philadelphia. **Distribution Station, Southeast Corner Ninth and Summerset streets, Darby, Pa.** Architect, Clarence E. Wunder, 1520 Locust street, Philadelphia. Owners, Supplee-Wills-Jones Milk Co., Twenty-sixth and Jefferson streets, Philadelphia. Brick, cut stone, steel, 2 stories, 122x96 feet, slag roof, cement floors, pine and granite block floors, metal lath, tile work, bond, floor hardener, ornamental iron work, waterproofing, terra cotta, cork insulation. Architect taking bids due February 5th at noon.

**Wayne Central Office Building, Lancaster avenue, West of Loudon, Wayne, Pa.** Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owners, Bell Telephone Co., North American, Seventeenth and Parkway, Philadelphia. Brick, cut stone and steel, limestone, 3 stories, 49x40 feet, steam heat, electric light, metal lath, tile work, hollow metal sash, hollow metal doors, bond, cork composition floors, dampproofing, shoring, metal weather strip, kitchen equipment, composition and cement floors, slag roof. Architect taking bids due February 1st.

**Parochial School, Fifth and Webster streets, Ranshaw, Pa.** Architect, Paul A. Monaghan, 1713 Sansom street, Philadelphia. Owners, Saint Anthony's Parish, Rev. Thomas Barth, on premises. Brick, granite, limestone, cut stone, 2 stories and basement, 75x68 feet (plumbing, heating, electric reserved), composition roof, maple floors, metal lath, tile and marble work, copper skylights, bond, ornamental iron work, dampproofing. Architect taking bids due February 2nd.

**Apartment House, Highland Park, Pa.** Architect, private plans. Owner, George Barnes, Highland Park, Pa. Brick and steel, 3 stories, 60x40 feet, hot water heat, electric light, tile work, metal lath, slag roof, oak floors. Owner taking bids due January 31st.

**Residence (alts. and add., fire repairs), Radnor, Pa.** Architect, Horace Trumbauer, and associate architect, Burrell Hoffman, Land Title Building, Philadelphia. Owner,

James F. Sullivan, care of architect. Brick, cut stone, steel, limestone, hot water heat, electric light, tile, tile and marble work, bond, ornamental iron work, slate roof, oak and pine floors, dampproofing, dreadnought mastic floors. Architect taking bids due February 1st.

**High School, St. Mary's, Pa.** Architects, Lawrie & Green, Commonwealth Building, Harrisburg, Pa. Owners, St. Mary's Borough School Board, E. G. Beck, secretary, St. Mary's, Pa. Brick, steel, 2 stories and basement, 165x88 feet, composition roof, composition and hardwood floors, roof ventilators, waterproofing, terra cotta (heating, electric and plumbing reserved), metal lath, rolled steel sash, kalamein doors, bond, iron stairs, ornamental iron work. Architects taking bids due February 11th.

**Bank Building, Phoenixville, Pa.** Architect, John H. Mower, Phoenixville, Pa. Owners, National Bank of Phoenixville, I. E. Miller, president, Phoenixville, Pa. Indiana limestone, granite and brick, Caenstone, plastering, reinforced concrete, 1 story and basement, 50x88 feet, tin roof, marble, cork and ceramic tile floors, metal window frames and sash, plate glass, corrugated wire and pressed lens glass, bronze and marble fixtures, vault doors and construction, electric wiring. Architect taking bids due February 14th.

**Residence, Villa Nova, Pa.** Architect, C. A. Ziegler, 1309 Locust street, Philadelphia. Owner, R. R. Titus, Jeffersonville, Pa. Stone, cut stone, 2½ stories, 101x36 feet, shingle roof, oak and pine floors, hot water heat, electric light, metal lath, tile work. Architect taking bids due February 6th.

**Church and School, Oil City, Pa.** Architects, W. Bolton & Son, Witherspoon Building, Philadelphia. Owners, The Trinity Methodist Episcopal Church, Van Peters, Oil City, Pa. Stone, 1 and 2 stories, 120x130 feet. Architects taking bids on cast stone due February 4th. On general bids due February 8th.

**Apartment House, Merion, Pa.** Architect, T. B. Lippincott, 11 South Sixteenth street, Philadelphia. Owner, name withheld. Architect taking bids (general) due February 8th.

**Store and Apartments (3), Royersford, Pa.** Architect, J. Vincent Poley, 162 Second avenue, Royersford, Pa. Owner, Samuel Green, Second avenue, Royersford, Pa. Brick, stone, 3 stories, 24x72 feet, tin and canvas roof, composition and wood floors, plumbing (heating, plumbing, lighting reserved), tile work, metal cornices, plate glass. Plans in progress. Owner will take bids.

**Residence, Phoenixville, Pa.** Architect, J. Vincent Poley, 162 Second avenue, Royersford, Pa. Owner, Joseph Nagy, 159 Nutts avenue, Phoenixville, Pa. Brick, concrete, 2½ stories, 25x45 feet, composition roof, yellow pine floors (heating, plumbing, lighting reserved), bond. Plans in progress. Owner will take bids.

**Department Store, Altoona, Pa.** Architects, H. Childs Hodgins & C. A. Hill, 130 South Fifteenth street, Philadelphia. Owners, Silverman Brothers, Altoona, Pa. Brick, stone, steel, concrete. Plans in progress.

## Pennsylvania Contracts Awarded

**New High School, Palmerton, Carbon County, Pa.** Architect, William H. Lee, 1505 Race street, Philadelphia. Owners, Board of Education, Borough of Palmerton, T. J. Keinerner, secretary, Palmerton, Pa. Brick, steel, cut stone, cast stone, 3 stories, 164x138 feet, asbestos built-up roof, mastic, cement and maple floors, hollow tile, metal lath, marble work, rolled steel sash, galvanized iron skylights, bond, kalamein doors, floor hardener, ornamental iron work and stairs, terra cotta, waterproofing, hollow tile, bronze work, steel partitions, dumb waiters. Contract awarded J. Y. Loux, Fifteenth and Hunting Park avenue, Philadelphia, \$224,480. Heating, D. G. Carpenter Heating Co., Wilkes-Barre, Pa., \$32,500.

**Telephone Exchange Building, Bywood, Delaware County, Pa.** Architect, LeRoy B. Rothschild, 215 South Broad street, Philadelphia. Owner, J. C. Kahn, Morris Building, Philadelphia. Brick, stone and steel, 1 story, 54x80 feet, slag roof, cement and pine floors, metal lath, tile work, steam heat, electric light. Contract awarded J. L. Fawley, 1615 Spruce street, Philadelphia.

**Residence, Lansdowne, Pa., \$25,000.** Architects, Heacock & Hokanson, Bailey Building, Philadelphia. Owner, Dr. Robert H. Ivy, Medical Arts Building, Philadelphia. Brick, cut stone, frame, 2½ stories, 70x23 feet, shingle roof, oak and pine floors, hot water heat, electric light, tile work. Contract awarded J. Howard Roberts, 22 South Lansdowne avenue, Lansdowne, Pa.

**Stores and Apartment (alts. and add.), South Bethlehem, Pa.** Architect, H. J. Wiegner, Bethlehem Trust Building, Bethlehem. Owner, Adolph Boek, 472 Birkel avenue, Bethlehem, Pa. Brick, 1 story, 31x60 feet, slag roof, pine floors, hot water heat, electric

light, copper work, general interior alterations. Contract awarded to Daniel Brace, R. F. D. No. 1, Bethlehem, Pa.

**Bridge**, on line of Elm street, East of Conshohocken, Pa. Architect, private plans. Owners, Philadelphia & Reading R. R., Twelfth and Market streets, Philadelphia. Stone and steel, structural steel, masonry. Contract awarded Frederick Snare, 1524 Chestnut street, Philadelphia. Superstructure, steel. McClintock & Marshall, Morris Building, Philadelphia.

**Moose Home (alts. and add.)**, Tamaqua, Pa. Architect, Benjamin R. Stevens, 1922 Arch street, Philadelphia. Owners, L. O. O. M., Tamaqua Council, Tamaqua, Pa. Contract awarded Butz & Clader, Allentown, Pa.

**Power House (add.)**, Willow street, East of Fifth street, Reading, Pa. Architects, The Ballinger Co., Twelfth and Chestnut streets, Philadelphia. Owners, Reading Hardware Co., Reading, Pa. Plumbing and drainage. Contract awarded C. H. Schlegel, Mt. Penn, Pa.

## New Jersey Construction News

**Theatre**, Woodlawn Park, Trenton, N. J. Architects, W. W. Slack & Son, St. Regis Building, Trenton, N. J. Owners, Hindinger Enterprise Co., care of architects. Frame, 1 story, 100x170 feet. Preliminary plans in progress. Too early for details.

**Store and Residence**, Trenton, N. J. Architect, R. A. Schumann, 202 West State street, Trenton, N. J. Owner, S. Szkhanny, care of architect. Brick, 2½ stories, 18x56 feet, slate roof, pine floors, steam heat, electric light, tile work, metal ceilings. Plans in progress.

**Stores**, Hotel Chalfont, Atlantic City, N. J. Architects, Rankin, Kellogg & Crane, 1012 Walnut street, Philadelphia. Owners, Chalfont Hotel, Atlantic City, N. J. Preliminary plans in progress.

**School**, New Jersey avenue, Atlantic City, N. J. Architect, H. A. Stout, Guarantee Trust Building, Atlantic City. Owners, Atlantic City School Board, H. H. Young, secretary, Atlantic City, N. J. Brick. Architect selected.

**School**, Northfield, N. J. Architect, H. A. Stout, Guarantee Trust Building, Atlantic City. Owners, Northfield School District, C. Kreutz, secretary, Pleasantville, N. J. Brick, 1 story, (2) rooms, pine floors (heating and electric work reserved). Owners ready for bids.

**Residence (alts. and add.)**, Ventnor, N. J. Architect, H. A. Stout, Guarantee Trust Building, Atlantic City. Owner, Dr. E. R. Doughty, 1905 Pacific avenue, Atlantic City. Brick, 2 stories, irregular size, slate and tin roof, hardwood floors, electric light, general alterations. Architect about ready for bids.

**Residence**, Atlantic City, N. J. Architect, S. G. Dobbins, Segal Building, Atlantic City, N. J. Owner, S. G. Dobbins, Segal Building, Atlantic City, N. J. Cinder block and stucco, 1 story, 45x56 feet, slag roof, hardwood floors, hot water heat, electric light, tile work. Architect ready for sub-bids.

**Residence**, Ventnor, N. J. Architect, S. G. Dobbins, Segal Building, Atlantic City, N. J. Owners, Hampton Brothers, 4405 Atlantic avenue, Atlantic City, N. J. Frame, 2½ stories, 34x36 feet, slate roof, hardwood floors, hot water heat, electric light, tile work, plate glass. Plans in progress. Owners will build.

**Apartment House (alts.)**, Camden, N. J. Architect, Byron H. Edwards, 34 South Seventeenth street, Philadelphia. Owner, name withheld. Hot water heating extension, electric light, tile work, hardwood floors, deadening felt, plumbing, plastering, papering. Plans in progress.

**Manufacturing Plant**, Trenton, N. J., \$1,000,000. Architect, W. E. S. Dyer, Land Title Building, Philadelphia. Owners, Thomas Maddock's Sons Co., Trenton, N. J. Steel and concrete construction, steel sash. Plant, 1 story, 1600x450 feet; power plant, 40x150 feet; office building, 50x125 feet, 2 stories. Plans in progress.

**Bath House**, Kentucky, Massachusetts avenue, Boardwalk and Calloway avenue, Atlantic City, N. J. Architect, LeRoy B. Rothschild, 215 South Broad street, Philadelphia. Associate architect, H. E. Stout, Atlantic City, N. J. Owners, Borshad's Baths, Inc., Atlantic City, N. J. Brick, stucco, terra cotta, 4 stories, 104x65 feet, steam heat, electric light, metal lath, tile and cement floors, marble work, hollow metal sash, galvanized iron skylights, tin-clad doors, ornamental iron work, waterproofing, terra cotta. Architect taking bids due January 31st.

**School**, Robbinsville, N. J. Architects, W. W. Slack & Son, St. Regis Theatre Building, Trenton, N. J. Owners, Washington Township School Board, Miss Hepburn, Windsor, N. J. Brick, steel, 1 story and basement, 140x32 feet, slate roof, pine floors, hollow tile, waterproofing and dampproofing (heating, electric work and plumbing reserved). Architects ready for bids due February 6th.

**School (add.)**, Florence, N. J. Architects, P. L. Flower Co., Fitzcharles Building, Trenton, N. J. Owners, Florence School District, E. Robbins, Florence, N. J. Brick, cut stone, 2 stories, 63x147 feet (plumbing, heating and electric reserved), slag roof, pine and composition floors, terra cotta, ornamental iron work, bond, rolled steel sash, tile and marble work, metal lath, electric lighting (alternate on linoleum). Owners taking bids due February 7th.

**New Cynwyd Hotel (alts.)**, 145 South Tennessee avenue, Atlantic City, N. J. Architect, Abraham Levy, 1208 Real Estate Trust Building, Philadelphia. Owner, name withheld. Brick work, stone foundations, electric light, plate glass, general interior alterations. Architect taking bids due December 7th.

**Air Port (alts.)**, Atlantic City, N. J. Architects, Carrere & Hastings, 52 Vanderbilt avenue, New York City. Owners, City of Atlantic City, N. J. Bids due February 7th.

**Church and Sunday School**, Ocean and Simpson avenues, Island Heights, N. J. Architect, H. L. Duhring, 1309 Locust street, Philadelphia. Owners, Island Heights Methodist Episcopal Church, Islands Heights, N. J. Frame. Architect taking bids due February 9th at noon.

## New Jersey Contracts Awarded

**Factory**, Trenton, N. J. Architect, W. A. Klemann, First National Bank Building, Trenton. Owners, Mutual Potteries, 381 North Clinton street, Trenton, N. J. Brick, steel, fireproof, 2 stories, 60x360 feet, slag roof, concrete and wood floors (heating reserved), electric light, metal lath, roof ventilators, elevators, rolled steel sash and skylights, fire doors, floor hardener, iron stairs. Contract awarded to J. H. Morris & Co., 211 North Montgomery street, Trenton, N. J.

**Factory (add.)**, Trenton, N. J. Architect, W. A. Klemann, First National Bank Building, Trenton. Owners, Mutual Potteries Co., 381 North Clinton street, Trenton. Brick, steel, fourth story add., 60x350 feet, slag roof, concrete and wood floors, electric light, metal lath, rolled steel sash and skylights, fire and kalamein doors, floor hardener, iron stairs. Contract awarded to William Burton, American Mechanics' Bank Building, Trenton, N. J.

**Factory**, Sixth and Atlantic avenue, Camden, N. J. Architect, J. S. Fuller, 5438 Locust street, Philadelphia. Owner, Benjamin Small, care of architect. Brick, concrete, steel, 1 story, 150x325 feet, 12x160 feet, slag roof, maple floors, vacuum heat, electric light, rolled steel sash, hollow metal skylights, tubular doors, roof ventilators, structural steel, oil-burning equipment. Contract awarded Simon Kaplan, care of architect.

**Court House alts.**, South Broad and Market streets, Trenton, N. J. Architects, W. W. Slack & Son, St. Regis Building, Trenton, N. J. Owners, Board of Freeholders of Mercer County, E. E. Margerum, Court House, Trenton, N. J. Stone, 1 story, hardwood floors, elevator (1), general interior alterations, heating and lighting extensions, tile and marble work. Contract awarded to T. B. Johnson, 669 Princeton street, Trenton.

**Bank (extension)**, Atlantic City, N. J. Architect, J. Vaughn Mathis, Guarantee Trust Building, Atlantic City. Owners, Second National Bank, William Corfer, New York and Atlantic avenues, Atlantic City, N. J. Limestone, 40x100 feet, ornamental bronze, general alterations. Contract awarded to J. Mathis & Son, Guarantee Trust Building, Atlantic City, N. J.

## Delaware Construction News

**Store and Residence**, Eighth and Union streets, Wilmington, Del. Architect, John A. McKibbin, Industrial Trust Building, Wilmington. Owner, P. Gold, on premises. Brick, 2 stories and basement, 20x65 feet, slag roof, pine floors, metal ceilings, plate glass. Owner taking sub-bids.

**Residence**, 1006 Union street, Wilmington, Del. Architect, John A. McKibbin, Industrial Trust Building, Wilmington. Owner, Mrs. T. Persolio, 1008 Union street, Wilmington, Del. Brick, 2 stories and basement, pine floors, slag roof, slate work. Owner taking bids.

**Store and Residence (alts. and add.)**, 737 West Fourth street, Wilmington. Architect, John A. McKibbin, Industrial Trust Building, Wilmington. Owner, I. Spiller, on premises. Brick, 3 stories and basement, 20x60 feet, pine floors, slag roof, metal cornices, general alterations. Plans in progress.

## Delaware Contracts Awarded

**Store and Oil House**, Maryland Avenue Freight Station, Wilmington, Del. Architect, private plans. Owners, Philadelphia & Reading R. R. Co., Twelfth and Market streets, Philadelphia. Concrete, brick, steel, 1 story, 32x84 feet, built-up roof, concrete, steam heat, electric light, rolled steel sash, rolled steel doors, bond, ornamental iron work, waterproofing. Contract awarded Curtis Grindrod, 10 South Eighteenth street, Philadelphia.

## Miscellaneous Construction News

**Garage**, location withheld. Architect and engineer, associate, J. L. Stetler and H. M. DDeysher, 1015 Chestnut street. Owner, name withheld. Reinforced concrete, brick, terra cotta, 4 stories and basement, 10x146 feet, slag roof, cement floors, metal sash, steam heat, electric light. Plans in progress.

**Apartment House**, location withheld. Architect and engineer, associate, J. L. Stetler and H. M. Deysher, 1015 Chestnut street. Owner, name withheld. Brick, steel, terra cotta, 4 stories and basement, 70x110 feet, slag roof, vapor heat, electric light, tile and marble work, hardwood and composition floors, elevators, kalamein doors. Plans in progress.

**Lyon Hall Dormitory**, Ithaca, N. Y. Architects, Day & Klauder, Franklin Bank Building, Philadelphia. Owners, Cornell University, Ithaca, N. Y. Stone, steel, concrete, 3 stories, 30x110 feet, slate roof, central steam heat, electric lighting, marble and tile work. Architect taking bids due February 5th.

## Proposal

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., January 17, 1924. Sealed Proposals will be opened in this office at 3 P. M., February 12, 1924, for new roof over call room at the United States Custom House at Baltimore, Maryland. Drawings and specifications may be obtained from the Custodian at Baltimore, Md., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from page 68)

solutely assure adhesion, as frequently the variation of the amount of water contained and the exact time of evaporation play an important part.

It is hardly necessary to state here the various methods which can be employed to safeguard and amply protect foundations and masonry and it might be profitable to conduct a campaign of education along these lines, so that the public will not look with fear upon Winter construction. After a building is enclosed and protected from the elements, the setting of temporary radiators after the installation of the heating system of course expedites the remainder of the work.

The inducement for the prospective builder as we all know lies in the fact that there is usually a better supply of labor during the Winter months. This has been especially true during the last four years when the large flood of building operations during the busiest period has created such a shortage of labor and material as to bring about an unhealthy condition for both contractor and owner.

The contractor who has figured on the established wage scale has too often to his sorrow, found his men soldiering on the job and himself helpless in the situation. A command would only result in losing his help altogether and frequently compel him, in order to complete his work, to raise the wages or pay overtime as an inducement to obtain workers from other contractors who in turn would suffer the same experience and would finally be compelled to bid against the first contractor for the return of their former mechanics.

After a few experiences of this nature, the contractor would naturally endeavor to protect himself in future work and the succeeding owner would be compelled to pay the penalty of this competition for labor.

A better distribution of work throughout the year would tend to decrease this tendency and likewise costs thereby. Another evil which might be eliminated arises from the fact that unemployment drives workers into other fields or climates and many of them do not return, thereby creating a still further economic loss.

It is hardly necessary to state here that the continuous overhead of a contractor's organization is a considerable burden to him during dull seasons and is a corresponding inducement for him to reduce his margin of profit for continuous employment, which will result in a decided advantage to the owner who can be educated to the advantages of building during the Winter period.

I believe a general publicity campaign directed toward the Architect would be beneficial. In order to obtain results, the co-operation of the Architect or Engineer is absolutely vital. If Winter work is under consideration, the conditions to be encountered should be clearly anticipated. I believe it would be advisable where time is of importance, to state in advance that the contract should be based on actual working days. Otherwise the contractor will, or rather should, protect himself by ample allowance for bad weather. Thus the cost is increased and if moderate weather prevails, the owner is likely to be the loser. It is also necessary to definitely consider work as a Winter job in the writing of specifications. In other words, if the contractor's attention is called to the fact that he must figure on thawing out frozen ground, on providing a certain amount of temporary heat, on temporary enclosures at door and window openings and in general, on carrying on his work irrespective of weather conditions, he will then allow enough in his original bid to cover the cost of such work and will not either slow down or stop work or ask the owner for extras when cold weather sets in.

In order to avoid any question at the completion of the work relative to the time element, it is well to specify exactly what weather conditions and temperature are necessary so that a "working day" is clearly defined in advance.

Naturally there are some contractors better fitted than others, by virtue of both experience and necessary equipment, to carry on work during the Winter months. We have found that a number of prospective builders hesitate to let contracts just before cold weather, due to the fact that some friend or associate of theirs has gone through an unfortun-

ate building experience, but by showing them that most difficulties can be avoided by selecting a contractor who knows how to meet these conditions, such prejudice can be overcome.

Where there is not a general contractor on the work, the contractor for the masonry and concrete work, will expect and should receive the proper co-operation of the other trades, so that the building can be enclosed and heated as quickly as possible, with this in mind, the specifications covering glazing, temporary boiler connections or radiators and the maintenance of the heating system should be plainly specified, in order to obtain the co-operation of all trades.

A general publicity campaign might be directed toward the public as well as the contractors. A chart showing clearly the fluctuations as well as a statement showing all the facts clearly and indicating the advantages to be gained, would be valuable and in time should produce results. A thorough study of the situation by Committees representing the various industries throughout the sections of the country affected, and the submitting of their report for discussion among the various local organizations should bring a wider range of experience and knowledge of its practical application to the individual contractors. A campaign carrying a popular slogan, obtained possibly by the offering of prizes to the public, would tend to arouse a general interest in the subject.

It should be pointed out clearly that in many cases owners will profit by proceeding with their work regardless of weather conditions, when they can make savings of interest as well as taxes on investments lying idle. It is surely safe to state conservatively that Winter construction will cost an owner no more than Summer work.

In all of these elements which enter into the general question of improving building conditions, a careful analysis of the situation by both Architect and owner and frequently consultation with an intelligent contractor will produce savings in cost of construction and result in a completed enterprise instead of an abandoned enterprise. This process repeated many times will produce healthier, saner and more satisfactory conditions in the building industry.

(The chart referred to in the sixth paragraph may be obtained by addressing Ira L. Smith, 1038 Munsey Building, Washington, D. C.)

You owe it to yourself to keep in touch with what is going on in the trade, and you can do this only by becoming a subscriber to and regular reader of your trade paper. If you are not a regular reader of the Builder's Guide you should be. The cost is not excessive. A five-spot insures it fifty-two times in the course of a year.

## BUYING WEATHER

Buying summer weather in the winter time, in any latitude, is rather a complex matter. Some people solve the difficulty by going to California, to Florida, or to some more distant semi-tropical land during the cold season. In these states, weather is one of the assets and supposed to be had for the living in it.

On a mild, soft June morning, the air itself is a joy, giving a sense of exhilaration. This condition is the goal toward which the heating engineer is working in the conditioning of the winter air in the house. There are four points which must be taken into consideration in his work toward this end. First, the heat must be produced and efficiently, without undue wastage between the fuel and the heat delivered in the rooms of the house. Second, the house must be so built that this warm air does not leak out faster than it can be efficiently produced. "Forcing the furnace" is the inefficient way of making up for undue heat loss. Third, the quality of the air itself must be kept good, usually by means of ventilation, natural or otherwise; and fourth, there must be sufficient humidity in the air of the house if the living conditions are to be satisfactory.

While the first points are fundamental and fixed more or less in the building of the house and the selection and installation of the heating plant; yet if failure or defects appear along these lines, there are remedies which may be applied at almost any time. Mid-winter is the time when such defects are likely to appear and to make themselves most felt, or when a partial failure in the heating plant is most distressing in the home.

### *Mid-Winter Efficiency for the Heating Plant*

The amount of usefully applied heat, in actual winter conditions of home heating may vary from 25 per cent. to 75 per cent. of the total available heat, under ideal conditions, according to research work of the Experimental station of the University of Illinois. Under poor conditions it is possible to lose through chimney wastage of hot gasses, etc., as much as is usefully applied—even as much as 40 or 50 per cent., including the loss from soot also. The clogging of soot may become a real factor. The loss through the ash pit of unburned fuel, or fuel not completely burned, may be easily detected. There is still the heat lost by radiation before reaching the rooms to be heated.

These unnecessary losses are not due to poorly designed furnaces or improper installation. Thin fires, and lack of care in firing, result in excessive losses. Dirty pipes and soot in the chimney also give wastage of heat. Much black smoke emerging from the chimney shows that

fuel gasses are being thrown off without being consumed. The wise householder will examine into conditions if his chimney smokes very much. When coal was a few dollars per ton one could afford to hire a "boy to run the furnace," and let him use coal enough to get the house warm. In these days it behooves the householder to know something of his own heating plant and to study the science of firing it. Bulletins have been issued which will help at every step.

If one has a furnace which works all right in mild weather but fails in extremely cold weather, relief may be obtained, according to building authorities, by placing a small electric fan in the inlet duct to blow air to the furnace and thus cause a brisker circulation throughout the whole system. The fan would be used only in warming up the house in the morning or in extremely cold weather. It is a matter of record that an ordinary electric fan installed in this way will double or triple the capacity of the heating system.

### *Leaky Building Construction*

If leaking air should stain the walls and ceilings as a water leak does, we should have houses which would be easier to heat because the air leakage which permits an unnecessary waste of heated air would be known and stopped. The difference in coal bills between a leaky construction and a well built house will in a few years repay for thorough insulation in the first building. If the attic is not used, the insulation should be applied between the ceiling of the upper room and the attic floor, rather than under the rafters, otherwise only a thickness of plaster separates a warm room from a cold attic, accompanied by considerable heat loss. Beam filling of a leaky wall at the basement line, closing the partitions from the basement so that heat did not escape to the attic and similar small attentions have been the means of cutting coal bills almost in half; while at the same time making the house more comfortable. It is no exaggeration to state that fully 40 per cent. of the heat losses in the average house can be attributed to this neglect of insulation, according to William H. Driscoll, vice president of one of the big building companies, in *Popular Science Monthly*.

### *Quality of the Air*

Tests as to the quality of the air have been carried on for some years, in the conditioning of the air in school buildings and many practical points have been established which may well be applied to the condition of the air in the home. It seems to be established that it is the movement quite as much as the content of the air which affects the comfort and the working conditions of the individual. These show that only the air in immedi-

ate contact affects the individual, and that a slight movement continually brings new relays of air in contact with the skin. Much interesting experimental work has been done relative to the use of ozone as a means of rejuvenating the air in an enclosed space, and this promises further development. That "mild exhilaration" in the air following a thunderstorm is due to the generation of ozone in the electrical storm. Ozone is not usually present in the air of our cities because it is quickly consumed by the decaying matter and other oxidizable substances. Small units for producing ozone are made which are used in the sick room or in hospitals.

### *Moisture in the Air of the House in Winter*

Outdoor air on a very cold day is comparatively dry. When this air is brought into the house and raised to a temperature of 70 degrees Fahrenheit there is not enough moisture for the expanded air, and this dry air sucks moisture from every object with which it comes in contact, including the human body. The air in our houses in winter is often drier than the air of the most arid desert in the world. Getting enough moisture in the air to have any effect is not an easy matter, when one realizes that authorities say that the evaporation of 15 to 20 gallons of water a day may be necessary for the ordinary 8 or 10-room house—that would be 5 to 10 gallons for the smallest house.

Health authorities state that there is a constant secretion from the normal mucous linings of the passages of the nose and throat which kills the infections which may be inhaled. Living day after day in super-dry air, tends to dry and prevent these germicide secretions and leaves the membranes open to attack and infection.

Modern heating manufacturers are taking these facts into account and are putting water in warm air furnaces, some of which are comparatively efficient, and noiseless steam valves on radiators which bring steam into the air. There are also humidifiers which really do evaporate gallons of water. The large quantity of moisture required must be kept in mind in selecting them. Hygrometers, which show the relative humidity, are coming to be used so that the householder may know the true conditions.

### *A Steaming Teakettle*

In the small house or apartment there is perhaps no better way of getting immediate relief when the air is so dry that every one is cross and irritable than a steaming teakettle pouring its stream of vapor into the air, or drawing a tubful of hot water in the bathroom and letting it stand for a short time.

## ***A Builder Carries Many Risks***

More than he would like, as a rule. There is one he need not assume. That is the fire risk. Always present, yes, but adequate insurance will cover the danger of loss.

Your agent can arrange to automatically increase the value of the policy as the operation progresses. Ask for a North America Builders' Risk Policy. It is sound indemnity.

## **For Lowering the Freezing Point of Concrete—**

**And making it Permanently Hard and Waterproof**

**T**HE addition of "ANTI-HYDRO," a liquid integral compound to the gauging water, lowers the freezing point of concrete from 15 to 18 degrees, allowing you to work right on through the cold weather.

"ANTI-HYDRO" also makes concrete **permanently** hard and waterproof, all in one operation. Easy to use—simply mix it with the gauging water.

For 19 years "ANTI-HYDRO" has proved to be the best by test.

Send for information or specifications on any type of concrete work. Stock carried by The Van Sciver Corporation, Parkway at 24th St., Philadelphia, Pa.

## As The Editor Sees It

### SERVICES OF AN ARCHITECT

By C. E. SCHERMERHORN, *Architect*  
Member American Institute Architects

The thinking public is awake to the value of the services capable of being rendered by an architect, and recognize that his province bears the same relation to the owner as that of a specialist in medicine or surgery to his patient. In countless ways the expert advice and suggestions of an experienced architect will be found to have substantial value, and his worth, in this respect, cannot be economically ignored by anyone who has determined to build, whether it be a bungalow or a great commercial or monumental project.

When a location is in contemplation or has been determined upon, the architect selected should be made acquainted with the owner's ideas and conception of what the building should be, and its character and purposes. The exigencies of the site should then be studied, and the climate, outlook, grades, drainage and other essential factors carefully considered, as their influence make for the success or failure of the completed building.

This will enable the architect to obtain a knowledge of the essential requirements, to discuss any fallacies, and to sketch out practical and comprehensive plans for the interior arrangement and exterior design, organized and adapted to the real need and precise conditions, in conjunction with the economic condi-

tions that underlie the problem. These preliminary studies may offer several solutions, one being advantageous from one point of view, and another from another point of view, which are then capable of being intelligently discussed with the client and permit of definite conclusions being reached.

From these sketches and studies, showing the general plan and design of the contemplated building, with their accompanying synopsis of the materials of construction, fixtures and finish, close approximate estimates may be obtained from contractors. These estimates may afford a basis for determining the future possibilities of the project and enable its further development by the preparation of the final working drawings, which involve an accurate layout of all floors, of all the elevations, both exterior and interior, also typical sections and detailed methods of construction. The working drawings must be so complete that a contractor will know exactly how and of what material every part of the building is to be constructed, thereby forestalling any guessing, which so frequently is costly to the owner.

The working drawings are accompanied by specifications, taking up in the form of a description what it is impossible to express on the drawings, and stating therein with clearness and precision the grades and character of the work, materials, ingredients, appliances and fixtures required to be used and in-

stalled. These specifications also show how the contractor shall do certain portions of the work and co-operate with the various sub-contractors; they also state the indemnity bonds, insurance, etc., required; and, in general form a complete thesis of the building to be constructed, leaving no doubt in the minds of the bidder, as to the exact amount and character of the work called for. This assures that all estimates received shall have been intelligently submitted, and that, when the contract is ultimately awarded, the contractor can plan its progress with a definite knowledge of the materials and requirements, the work being thus carried out with greater expedition and consequent economy.

After it has been determined to proceed, a legal binding and definite contract must be prepared by the architect in which the requirements on both sides are clearly set forth, the "instruments of service," in the form of specific and technically intelligible drawings and specifications, being made a cohesive part of this contract. Definite terms of payment, time of completion, and requirements in connection with lien laws must be provided for. There must also be provisions in the contract for fire, lightning, casualty, compensation and contingency insurance, for necessary bonds in connection with completion, and for compliance with local, municipal or state requirements, departmental directions or rulings, ordinances and acts.

**DRAWING

**CHARLES H. ROBBINS CO.**  
1729-31 Sansom Street Philadelphia  
BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 3519

**BLUE  
PRINTS**

After the contract has been awarded the architect should be placed in full charge, so as to enable him to direct and observe the proper laying out of the work, and to see that the plans and specifications are conformed to. He must also make proper disposal of the problems that arise while the building is in progress, passing on all technical questions and furnishing from time to time explanatory detail drawings of the various parts of construction, ornamentation, fixtures, arrangements, etc., as required; he issues certificates of payment as they fall due under the terms of the contract and also becomes the arbiter in all questions of dispute.

It is only by following these steps, in their logical, natural sequences, from the very conception of the building to its final completion, that an owner can obtain the best results with a minimum of worry and a maximum of economy.

In order to construct a building successfully, it is necessary to anticipate each step in the progress of its development, and to outline a complete system for its erection, and to control the work until the building is turned over completed to the owner.

Full architectural services, rendered by a competent man, will save many times his comparatively small compensation. The instruments of service, the plans and specifications, are the fundamental element in the contract, and to produce them requires thought, experience and learning, also familiarity with the qualities, properties, peculiarities, weight and strength of materials, the weights of structures and the relationship of the various operations to be performed by the many trades represented in the building.

The annual banquet of the Philadelphia Builders' Exchange and Employers' Association will be held in the Manufacturers' Club Wednesday evening, February 13, at 6.30 o'clock. The speakers will be the Honorable Walter Gordon Merritt, New York City, Councilman William W. Roper, Philadelphia, and the Honorable Harold B. Wells, Bordentown, N. J.

A notebook containing instructions for modern practice of establishing lines and levels will be sent free to any one requesting it. The calendar and the cross section pages are also useful to builders and contractors and furnishes a convenient means for preserving notes on costs, estimates, measurements, etc. For copy address: Warren-Knight Co., 136 N. 12th St., Philadelphia, Pa.

Don't be discouraged if you make an occasional mistake; if men didn't there wouldn't need to be any claw on a hammer.

## LOOKING AHEAD

BY WILLIAM F. CHEW

Building activity is sweeping over the land and is surpassing everything in that line we have ever known in the past, or even hoped for and yet we have not reached the point where we are even filling up the emptiness created by the long period of inactive building construction work.

Throughout the nation we see progress on every hand. We see greater activities in our factories, on the farm, in the mines, the railroads, and especially in construction, in fact all industry is sparkling with the life of greater activity. The demand for labor is keeping employed practically every willing worker in the country and at a higher rate of wage than ever realized before, except perhaps for a brief period during the late war. We believe that 1924, despite political discussions that may arise, will be the greatest year of business prosperity that this country has ever known.

The New Year opens with a world-wide betterment business program. The \$5,000,000,000 building record of 1923 will probably advance to seven or eight billions in 1924.

The value of the farm products of the country exceeds by nearly \$3,000,000,000 the value for 1922, and the value of 1922 exceeds by \$2,000,000,000 that of 1921, and 1924 will undoubtedly exceed 1923 by \$4,000,000,000, as the farmers are on rising ground despite the handicaps they suffered during 1920-1921.

The boll weevil cut short the cotton crop, and this resulted in an advance of from \$750,000,000 to \$1,000,000,000, over what a larger crop would have produced, and Southern farmers are thus as a whole benefitted to that extent, though individual farmers and individual sections are suffering by reason of boll weevil destructiveness. With added facilities to fight the boll weevil, the Southern farmers hold great expectations for the 1924 other crops to the extent of several hundred million dollars.

Based on December 1 acreage, production and prices the Agricultural Department estimates that thirty principal crops have a farm value of \$8,322,695,000. Similar crops on December 1, 1922, were valued at \$7,449,804,000 and \$5,629,548,000 December 1, 1921. Compared with last year's value, these thirty crops will bring to the farmers an increase of \$872,891,000 and compared with 1921 values an increase of over \$2,693,000,000. Better prices and larger acreage yields in most crops are heartening to the farmers and to the general business outlook of the country. The movement of citrus fruits and vegetables of almost every variety, winter grown for northern and western consumers, has begun, and

## WANTED--One Carpenter or Contractor in Every Locality to Install New Oil Burner

**C**ARPENTERS, contractors, architects and builders have an extraordinary opportunity to add to their incomes by installing the new Oliver Furnace Burner. This amazing invention is a real practical, efficient, furnace oil burner—without noisy motors, without electricity or complicated machinery—and sold at a low price. There is already an established, nation wide demand which makes it imperative for us to secure a man in every locality equipped to make installations.

### 50% More Efficient Than Coal

The Oliver Oil-Gas Burner for furnaces has been perfected to the point where it is at least 50% more efficient than coal. It combines a very small percentage of oil with air; to produce a mixture that burns with an intense, clean flame and gives even, dependable, steady heat—more than enough for the coldest weather.

### No Expensive Equipment

This simple device without any moving parts, converts any furnace into an automatic heating plant. It maintains a steady, even temperature in coldest Winter weather. It can be quickly and easily installed. It is absolutely safe—lasts a lifetime.

### Perfect Heating Guaranteed

Home owners everywhere realize the wonderful convenience and economy of burning oil. In over 150,000 homes, Oliver Burners have been so thoroughly tested that they are sold under an extraordinary guarantee of complete satisfaction.

### Mail Coupon for Attractive Offer

There is already an established demand for this inexpensive oil-burning equipment. By acting as our distributor or installing agent, you have an opportunity for a large volume of business yielding an extremely attractive income. The Spring and Summer months are ideal for installing and testing out burners while there is no fire in the furnace and no inconvenience brought about. Mail the coupon below or write us for plans and special offer to men in the building field. You can become our distributor on an extremely lucrative basis. Fill out and mail the coupon immediately.

J., \$243,779; Bennett McLaughlin, 21 South Seventeenth street, Philadelphia, \$244,790. Heating, J. F. Craig, Jersey City, N. J., \$34,135. Plumbing, Shearman & Tompkins, Lakewood, N. J., \$13,000. Electric, J. F. Buchanan Co., 1904 Sansom street, Philadelphia, \$6,677.

The man who doesn't advertise, these days, is forgotten. The world is too busy to look up dead ones.

## New Jersey Contracts Awarded

**Central Office Building**, Bridgeton, N. J. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owners, Delaware & Atlantic Telephone & Telegraph Co., care of Bell Telephone Co., Seventeenth and Parkway, Philadelphia. Brick, cut stone, steel, 3 stories and basement, 63x43 feet, slag roof, composition, cement floors, steam heat, electric light, metal lath, tile and marble work, bond. Contract awarded E. H. Keefer Cont. Co., 1321 Rodman street, Philadelphia.

**Manufacturing Building**, New Brunswick, N. J. Architect, private plans. Owners, Freda Asbestos Co., on premises. Brick and steel, 1 story, 90x300 feet, slag roof, concrete floors, steam heat, electric light, rolled steel sash, ornamental iron work. Contract awarded Austin Co., Jefferson Building, Philadelphia.

**Shops**, Clinton street, Camden, N. J. Architect, W. H. Cookman, Broad Street Station, Philadelphia. Owners, Pennsylvania Railroad Co., care of Mr. McClintock, Camden, N. J. Brick, steel, 1 story, 86x150 feet, slag roof, cement and wood block, roof ventilators, rolled steel sash. Contract awarded to Armstrong & Latta, 1926 Sansom street, Philadelphia.

**Residence**, Moorestown, N. J. Architect, Emil G. Perrot, Boyertown Building, Philadelphia. Owner, C. S. Boyer, care of architect. Concrete, frame, stucco, 2½ stories, 50x34 feet, (2) wings, hot water heat, electric light, tile work, wood shingle slate (alt.) slag and composition roof, hardwood floors. Contract awarded to Conger & Son, Haddon Heights, N. J.

## Miscellaneous Construction News

**High School**, Belair, Md. Architects, Hamme & Witman, City Bank Building, York, Pa. Owners, School Board of Harford County, C. M. Wright, Belair, Md. Brick, semi-fire-proof, 2 stories, 8 rooms, composition roof, pine floors. Owners taking bids due February 20th.

**High School**, Havre de Grace, Md. Architects, Hamme & Witman, City Bank Building, York, Pa. Owners, School Board of Harford County, C. M. Wright, Belair, Md. Brick, 2 stories, 12 rooms. Owners taking bids due February 20th.

**Grade School**, Aberdeen, Md. Architects, Hamme & Witman, City Bank Building, York, Pa. Owners, School Board of Harford County, C. M. Wright, Belair, Md. Brick, semi-fire-proof, 2 stories, 8 rooms. Owners taking bids due February 20th.

## Proposal

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., January 31, 1924. Sealed Proposals will be opened in this office at 3 P. M., February 25, 1924, for the construction of a new 14x33-foot stone-faced mailing vestibule at the United States Post Office, Middletown, Ohio. Drawings and specifications may be obtained from the Custodian of the building, or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from page 84)

Southern railroads for the next four or five months handle an average of about 1100 cars of foodstuffs a day. This traffic brings into the South between \$400,000,000 and \$500,000,000 a year, added to the income of the Southern farmer.

The coal industry has an increased output over 1922 by approximately 120,000,000 tons and with no disturbances will increase this by several millions in 1924.

Highway building is under construction to the extent of some hundreds of millions of dollars in the South, and to an even larger amount in the rest of the country, hastening the time when impassable roads will give place to hard surface roads, and in doing this hastening the development of business in territories that have been practically idle owing to their inability to market their products in a satisfactory way, commensurate with time and effort of producing.

For the first time in many years the last Congress voted a fairly good sum for river and harbor work, and this session of Congress will probably do equally as well. With President Coolidge's hearty commendation of the St. Lawrence project, we may soon see the beginning of a work commensurate in importance to this country to the Panama Canal itself; and with the construction work now under way and that suggested by President Coolidge, the time should not be far distant when from Chicago to New Orleans there will be a great movement of traffic by reason of permanently deepened and maintained water transportation opportunities.

The railroads are handling the largest volume of freight in the history of the country, and one of the largest systems in the country plans on truck service for package short hauls in 1924, to enable a freer movement on heavy freight. Passenger traffic is far in excess of their facilities for handling it expeditiously and to the best advantage. The railroads of the country spent about \$1,500,000 on expansion during the year, and moved a little less than 1,000,000 carloads of freight every week. To meet the growing and increasing activities of the nation's business for the coming year the railroads will have to be prepared to haul at least 250,000 carloads of freight more each week than they did in 1923, and will have to increase their expenditures for expansion by several hundred millions.

We have 14,000,000 of the 17,000,000 automobiles and motor trucks in the world. We are spending on the purchase and maintenance of automobiles about \$9,000,000,000 a year, or an amount equal to one-half of the total capitalization of all the railroads in the United States. This amount is largely in excess of the

total taxation paid for national, state, city and county affairs.

In owning 14,000,000 out of 17,000,000 automobiles and motor trucks in the world we hold a dominant position in this industry which is almost matched by our other resources and business development as compared with the rest of the world.

Now, just for a moment let us look to the Far East from where come reports of decided improvements. China in places is still in the throes of semi-anarchy, but so vast is that empire in extent and population that while one province may suffer, another may prosper, and China will soon be counted among the advancing nations of the earth.

Conditions in India have improved wonderfully with a larger market for outside goods, while producing at home increased supplies as compared with former years.

Japan has weathered heroically the great disaster of the earthquake and fire, and as San Francisco, rebuilt on a larger and greater scale than ever before, following its earthquake, so will Japan do.

In Europe we learn conditions are steadily improving. Unemployment is steadily lessening in Great Britain and on the Continent.

Just as soon as the Ruhr dispute between France and Germany is settled the industrial leaders promise to put back to work the hundreds of thousands of men who were maintained by the German Government in passive resistance.

Even in Russia economic conditions are bettering, and the Bolshevistic rule, which well-nigh ruined that country, is losing its hold upon the people, and even the Bolsheviks and the Communists are realizing that they have made a fearful failure and are now struggling to get Russia back on solid economic ground, with a better financial system and a revival of industrial and agricultural work.

We, as a nation, should close the Old Year with thankfulness for all the good things which it brought in material activities and betterment, and we should enter the New Year looking straight ahead, for a steadily enlarging volume of world foreign trade, and our own foreign trade, showing that every nation on earth, with rare exceptions, is able to buy from us in ever increasing quantity, and that we are buying from all other nations more than we ever bought before.

Then are we looking ahead to expansion for the future, and lack of vision and imagination the man must have, who cannot see in present conditions a promise of increasing prosperity for the years to follow.—*National Builders' Bulletin*.

We'll write your advertising without charge. All we ask is that you pay for the space and provide our ad. man with the necessary selling pointers.

## HAS THE GENERAL CONTRACTOR A PLACE IN THE BUILDING CONSTRUCTION INDUSTRY

Architects in planning homes, factories, cathedrals and skyscrapers act much in the same capacity as does a judge. Interpretation of the owner's requirements in the way of design and plan depends much upon the architect's knowledge of building laws and customs. Building design is pre-determined by the properties of sections and by the accepted beauty of ancient structures. What Blackstone is to a lawyer and judge the Greek and Roman orders of architecture are to the architect.

Carrying our analogy a bit further we may compare the general contractor to our governmental executive. If the building law is interpreted by our judge, the architect, it is enforced by our executive, the general contractor and by the same token it is the sub-contractor and the building craftsman who acts as our legislative bodies in things architectural. When the accumulated knowledge and experience of these men leads them to assert that the "judge's" interpretation of architectural law is impossible of fulfillment a new architectural law is written.

The legislative, executive and industrial department of government are essential for different control of social action. The architect, general-contractor and craftsman are essential in modern construction.

Lately we have heard much about the policy of awarding separate contracts for mechanical installations on government construction, which is being urged upon the International Board of Contracts and Adjustments by representatives of the mechanical trades.

In a brief prepared by Ward P. Christie, Research Engineer, we are told that by elimination of the general contractor the owner's responsibility is increased and that he is liable to lose due to such causes as the following:

- Increased cost of construction.
- Delay in completion.
- Injury to workmen and the public.
- Patent infringement.
- Injury to adjacent property.
- Damage from the elements and acts of God.
- Imperfect material and workmanship.
- Liens and the abuse of lien laws.
- Default on subordinate contracts.
- Unknown underground conditions.
- Demands for extortionate wages.
- Fire and theft.
- Labor material and transportation shortages.

The general-contractor has won his case. General contracting in construction today is a combination of management, service, financing and the assump-

tion of certain risks which are not common to manufacturing and other industries.

The general contractor is here to stay. He is the man who takes the greatest risks in the contractual industry and is also the man who assumes the burden of responsibility.—*National Builders' Bulletin*.

Mayor Kendrick, of Philadelphia, has announced the appointment of John Molitor, 404 W. Cheltenham Avenue, as City Architect, and Council unanimously confirmed the action.

Mr. Molitor was chief of the division of Housing and Sanitation for six months when it was established under the late Mayor Blankenburg.

Mr. Molitor succeeds John P. B. Sinkler, who was appointed by Mayor Moore.

The offices of the City Architect are in the 11th floor of 1211 Chestnut st.

"I am going to give out the designing work among private architects," the new City Architect said. "I don't believe one man can act as architect in all buildings and for that reason I will seek specialists in various lines of building."

"We will get the best we can with the purpose of providing utilitarian buildings and at the same time structures that will add to the beauty of the city."

Mr. Molitor was born in this city and attended public schools, graduating from Central High. He went to work in the architect's office of James H. Windrim, father of the designer of the "Palace of Justice," and studied in the Pennsylvania Academy of the Fine Arts.

Later he went into the office of Cope and Stewartson, where he was chief draughtsman until 1907, when he opened his own office.

In 1902 he entered the University of Pennsylvania traveling scholarship, which he won. He traveled through France, England and Italy, making a special study of municipal architecture.

Mr. Molitor has had charge of many large construction operations. He had a part in the construction of the District Building, in Washington. He had charge of the designing and construction of the Market Street National Bank, 1107 Market Street, Philadelphia.

Mr. Molitor for two years has been president of the T-Square Club, an organization of architects. He is also a member of the American Institute of Architects.

The man who doesn't advertise because he can't afford to "do it right" will never reach a position of affluence because everything worth while in the world had to have a beginning, and there can be no "get there" for the fellow who fails to make a start.

## BUILDINGS AND BUILDING CODES

"Buildings and Building Codes" is the title of the next bulletin in the series, Lumber and its Utilization, issued by the National Lumber Manufacturers' Association. It establishes two definite purposes for building codes:

1. Control over the structural safety of buildings.
2. Control of the fire hazards created by buildings and their occupancy to produce:
  - (a) reasonable safety to life,
  - (b) reasonable safety to the city from exposure to fires.

A number of cities were visited and many city officials consulted in the preparation of this bulletin, so that many points of view are presented. The material given provides an understanding of certain broad principles which are universally applicable, and which need only to be modified by local conditions to form the basis of special building code legislation.

Safety to life, involving the stability of a building, as well as means of egress, is emphasized as the most important consideration in the preparation of a building code. Attention is also given to a discussion of exposure and conflagration hazards, division of responsibility for safety, the nature of occupancy, competition between cities and direct connection between building codes and the commercial needs of the community. The activities of the Building Code Bureau of the National Lumber Manufacturers' Association are also outlined.

The bulletin will be distributed to building inspectors, city officials, architects, and engineers.

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising or advertising from an emotional standpoint.—Elbert Hubbard.

That plan of the king in olden times who killed the messenger who brought him bad news has my approval. Blessed are those who bring glad tidings! If you cannot write a good letter—don't!—Elbert Hubbard.

## As The Editor Sees It

### UNIFORM CONTRACTS A PUBLIC SERVICE

*Address delivered by Gen. R. C. Marshall, Jr., at joint meeting of Associated General Contractors of America and  
American Road Builders' Association, Chicago, Ill., January 17.*

#### EDITOR'S NOTE

Unnecessary costs of public work now being carried by taxpayers are in line to be eliminated by adoption of more business-like methods of government administration, according to statements made by General R. C. Marshall, Jr., General Manager of the Associated General Contractors of America.

Speaking before a joint meeting held by the contractors' national association and the American Road Builders' Association, General Marshall called attention to the fact that the public has long been shouldering a needless tax burden because fifty or sixty individual bureaus of the government have been following widely divergent policies in contracting for work.

A new form of government contract, unifying provisions in the documents used by the various bureaus, has been drafted by the Interdepartmental Board of Contracts and Adjustments, a special agency created under the Bureau of the Budget.

When the new government contract has been placed in use, General Marshall declared, "commercial organizations dealing with a federal agency will find, if the board's intentions are carried out, a re-

vised code of practice compatible with the established principles of business."

The attention of Congress was called about two years ago, to the fact that some fifty or sixty Governmental Bureaus handling construction work were using about fifty-seven different varieties of contracts in executing their projects, and were doing so, much to the disadvantage of the Government. At first this great variety of legal instruments was regarded as merely a harmless display of individualism among officials, or even perhaps a commendable effort to promote the welfare of each bureau, but upon closer investigation, it was found to have created a serious problem in the conduct of Federal Construction.

Had the different contracting practices established throughout these many bureaus been due entirely to the contract forms in use, correction of the situation might have been comparatively simple, but it was found that many laws governing construction in one or another department had found their way into the Federal Statutes, until the governing regulations were a conglomeration of special conditions.

Consequently construction companies

could not know the administrative practices of every bureau or conduct their business to serve economically the special requirements of so many agencies. Many contingencies, not common to commercial work were introduced into Government construction and the inevitable result was higher construction cost. The Construction company possibly could not lay its finger on the exact items of additional expense, but it knew from costly experience that a federal job, bid at commercial prices for the same sort of work, was likely to prove a losing proposition.

When the regulations and administration governing construction vary among different agencies, it is inevitable that some of these agencies hold forth greater inducements to commercial organizations than those offered by some others. Under such circumstances it was to be expected, therefore, that certain bureaus and departments of the Government received keener competition for their projects than others, and that prices for similar types of construction were also inclined to vary.

Incident to this condition, Government officials found that certain bureaus dealt with a number of construction companies who submitted proposals for practically

**DRAWING  
MATERIALS**

**BLUE  
PRINTS**

any project to be constructed, but that these companies apparently would not bid on work under another bureau where they did not know the practice.

When it was found that many well known construction companies had withdrawn from Government work and did not desire to submit proposals, it dawned upon the Federal authorities that something might be wrong with the system. Therefore, an inquiry was sent to a great number of construction companies and needless to say these companies advised the authorities then that their suspicions were correct.

The business principles governing the conduct of construction work were found to have created a situation analogous to that which would exist if each division in an army were governed by a separate set of army regulations. Some two or three hundred laws and departmental rulings made it practically impossible for a construction company to anticipate, when dealing with the Government, just what it might expect in administration of the work and the contingencies thus created were incompatible with the business policies of many concerns.

As a result of the conditions here mentioned, a special agency was created under the Bureau of the Budget, known as the Interdepartmental Board of Contracts and Adjustments, which is now working on the standardization of Government contracts, and seeking to eliminate unnecessary special regulations. This Board has stated its intention to bring Governmental contracting practice as closely in line with commercial practice as existing law will permit and then to recommend revisions and codification of federal contract statutes. Through such procedure which is regarded as essentially in the interest of the Government, it is proposed to adopt uniform regulations that will enable the Government to compete favorably with private and quasi public institutions.

For two years the Interdepartmental Board has worked steadily toward its stated objectives. After receiving comment from practically the entire commercial world it has developed a standard construction contract, which is to replace the many forms now in use. This document, which is practically completed, represents a great stride in commercial equity and will undoubtedly bring back into Government work many companies who have left this field, because of its entangling alliances.

While the standard contract represents a noteworthy accomplishment, a more gigantic task is being carried out by the Board in its formulation of a body of contract laws. For a year and a half it has been studying existing statutes and drafting substitutions for many that have

long ago served their useful purpose. The work is nearing completion and possibly during the present year may be in shape for transmittal to Congress.

Whether the Interdepartmental Board can induce some of the lawmakers on Capitol Hill to center their attention on the value of this work to the exclusion of individual interest remains yet to be seen, but the opportunity will probably come for every citizen, interested in the construction industry and in the welfare of federal public work to stand behind this Board and help guide its recommendations through much political fog.

When the new Government contract has been placed in use, those commercial organizations dealing with a federal agency will doubtless find that many practices long-branded as ethically and economically unsound, have gone to the scrap heap. In their place will be found, if the intention of the Interdepartmental Board is carried out, a revised code of practice compatible with the established principles of business.

Many public officials as well as contractors have begun to realize that the interest of the buyer as the interest of the seller is best served when their mutual obligations are in line with sound economics, and unencumbered by queer stipulations impossible of fulfillment. Probably in no other field has there been such utter disregard or possibly ignorance of economic laws as in the field of contracting and yet no other industry is so completely dominated by these laws or as sensitive to their action. Such a condition is inevitable in any industry that coordinates the products from numerous others.

It is therefore especially desirable that contracts governing construction should be made compatible with the great body of recognized business principles, commonly designated as accepted commercial practice. When this has been accomplished the country will then have a code of contracting, much less beset with lawsuits than at present and much more formidable to the party acting in bad faith who seek a recovery through some legal technicality.

Unless it is desired to deny the established order of business and take issue with the best business code that human minds have been able to devise, construction contracts like those of other industries should be an expression of this code. Failure to recognize this fact on the part of one or another element constituting the industry is undoubtedly the basic cause of much public criticism.

In one spot or another, the hundreds of individually drawn construction contracts have been out of line with sound commercial practice and the result has been to place a premium on gambling

**Masonic Building**, Pennsgrove, N. J. Architect, C. R. Peddle, 136 South Fourth street,

Philadelphia. Owners, Masonic Lodge, Pennsgrove, N. J. Brick, stone, 2 stories, 40x75 feet, slag roof, electric light. Plans in progress.

**Store Building**, 807 South Broad street, Trenton, N. J. Architect, R. G. Consolloy, Commonwealth Building, Trenton, N. J. Owners, D. & S. Abrams, on premises. Brick, 2 stories, 28x54 feet, pine floors, electric lighting. Plans in progress.

**Residence**, Somerville, N. J. Architects, W. W. Slack & Sons, St. Regis Building, Trenton, N. J. Owner, J. Rieger, Somerville, N. J. Frame, stucco, 2½ stories, 30x70 feet, shingle roof, hardwood floors, electric light, tile work. Owners ready for bids.

**High School**, Lambertville, N. J. Architect, W. A. Klemann, First National Bank Building, Trenton. Owners, Lambertville School Board, care of architect. Fireproof, reinforced concrete, steel, brick, 3 stories, 150x56 feet, slag roof, hardwood and concrete floors, hollow tile, safety treads, roof ventilators, waterproofing and dampproofing (heating, electric work and plumbing reserved), hollow metal skylights, fire doors, bond, floor hardener, iron stairs, ornamental iron work. Will be ready for bids in ten days.

**Residence**, Atlantic City, N. J. Architect, George Dobbins, Segal Building, Atlantic City, N. J. Owner, Mrs. Mary Vetter, New York, care of architect. Concrete block and stucco, 2½ stories, 148x28 feet, tile roof, hardwood floors, hot water heat, electric light, tile and marble work. Architect ready for bids.

**Apartment (add.)**, Atlantic City, N. J. Architect, A. F. Amodio, Segal Building, Atlantic City, N. J. Owner, A. De Simonae, 1733 Atlantic avenue, Atlantic City. Brick, 3 stories, 19½x45 feet, slag roof, hardwood floors, metal ceilings, tile and marble work, store fixtures. Owner taking sub-bids.

**Eagles Home (add.)**, Atlantic City, N. J. Architect, A. F. Amodio, Segal Building, Atlantic City, N. J. Owners, F. O. E. 64, A. F. Nichols, City Hall, Atlantic City. Steel, stone, brick, 4 stories, 42x150 feet, Barrett Specification roof, hardwood floors, hollow tile, heating extension, electric light, metal lath, tile and marble work, terra cotta, ornamental iron work. Plans in progress. Owner will be ready for bids in one week.

**Church**, Vineland, N. J. Architects, Mills & Van Kirk, Harrison Bldg., Phila. Owners, Church of the Pilgrims, Rev. J. J. McMillon, Vineland, N. J. Brick, 2 stories and basement, 50x86 feet, boiler room in rear of building, vapor heat, electric light, tile work, slate roof, hardwood floors, iron work. Architect ready for bids.

**12-Family Apartment**, Roosevelt avenue, Atlantic City, N. J. Architect, A. F. Amodio, Segal Building, Atlantic City, N. J. Owner, Somers Stillman, Cambridge avenue, Atlantic City, N. J. Cast stone, 3 stories, 34x85 feet, slag roof, hardwood floors, hollow tile, hot water heat, electric light, metal lath, tile work. Owner will build.

**Residence (alts. and add.)**, Riverton, N. J. Architect, J. Fletcher Street, 1120 Locust street, Philadelphia. Owners, Mrs. Robert Biddle, 3rd, 607 Bank street, Riverton, N. J. Stone and frame, 3 stories, 18x20 feet (hot water heat, electric work, plumbing separate bids), tile and marble work, slate roof, hardwood floors, painting, glazing and hardware. Architect taking bids due as soon as possible.

**City Hall**, Northfield, N. J. Architect, H. A. Stout, Guarantee Trust Building, Atlantic City. Owners, City of Northfield, City Council, care of architect. Brick, hollow tile, stucco, 2 stories, 35x50 feet, slate roof, hardwood floors, steam heat, electric light, tile work, rolled steel sash, roof ventilators. Architect taking bids due February 18th.

**Bank**, Millville, N. J. Architect, Thomas E. Ash, 1012 Walnut street, Philadelphia.

Owners, Millville National Bank, Millville, N. J. Architect taking bids due February 14th.

**School (add.),** Florence, N. J. Architects, P. L. Fowler Co., Fitzcharles Building, Trenton, N. J. Owners, Florence School District, E. Robbins, Florence, N. J. Brick, 2 stories, 12 rooms and auditorium, slate roof, maple floors, hollow tile, safety treads (heating, plumbing and electric work reserved), tile work, metal lath, bond, iron stairs. Lowest bidders: Thomas Day & Sons, Fitzcharles Building, Trenton, N. J., \$124,500; William C. Ehret, 13 West State street, Trenton, N. J., \$127,606. Plumbing, Trenton Plumbing & Heating Co., 366 South Broad street, Trenton, \$5,648. Heating, Mechanical Equip. Co., 214 South Twelfth street, Philadelphia, \$22,944. Electric work, Jackson Electric Co., Forst Richey Building, Trenton, \$3,924.

**School,** Robbinsville, N. J. Architects, W. W. Slack & Son, St. Regis Theatre Building, Trenton. Owners, Washington Township School Board, Miss Hepburn, Windsor, N. J. Brick, steel, 1 story and basement, 140x32 feet, slate roof, pine floors (heating, electric work and plumbing reserved). Lowest bidder: Thomas Day & Son, Fitzcharles Building, Trenton, N. J., \$29,541.

**Memorial Building for Colored Veterans,** Atlantic City, N. J. Architect, H. A. Stout, Guarantee Trust Building, Atlantic City. Owners, Board of Commissioners, N. R. Steinbricker, City Hall, Atlantic City, N. J. Building construction (plumbing, heating, electric reserved). Low bidder: Lam Building Co., 1001 Wood street, Philadelphia, \$149,200.

## New Jersey Contracts Awarded

**Residences (alts.) to Stores and Office,** 101 South Indiana avenue, Atlantic City, N. J. Architect, Lloyd Titus, Brighton Hotel, Atlantic City, N. J. Owners, Plum Brothers, 1115 Boardwalk, Atlantic City, N. J. Steel, brick, concrete, limestone, 4 stories, 50x150 feet, composition roof, composition maple and cement floors, hollow tile, electric elevators, waterproofing, hot water heat, electric light, metal lath, tile and marble work, copper sash, skylights, alterations. Contract awarded to Philip G. Hannum, Georgia Avenue and Thorofare, Atlantic City.

## Delaware Construction News

**Lodge,** Wilmington, Del. Architect, A. F. Amodio, Segal Building, Atlantic City, N. J. Owners, Sons of Italy, Dr. A. P. Revitto, Wilmington, Del. Brick, stone, 3 stories, 100x150 feet, slag roof, hardwood floors, steam heat, electric light, tile, marble and terrazzo work, ornamental iron work. Preliminary plans in progress.

**Dormitory Buildings (2), Boiler House,** Dover, Del. Architect, Frank R. Watson, 1211 Walnut street, Philadelphia. Owners, Murphy Homes, Harry Mayer, King's Highway, Dover, Del. Brick, fireproof, 2 and 1 stories, 30x30x67 feet, 48x80 feet. Bids due at architect's office February 27th at noon.

## Miscellaneous Construction News

**Auto Show Room and Apartment,** Baltimore, Md. Architect, A. F. Amodio, Segal Building, Atlantic City, N. J. Owner, W.

Rinseh, Mt. Royal and Maryland avenues, Baltimore, Md. Steel, brick and concrete, 8 stories, 55x80 feet, slag and Barrett Specification roof, tile and hardwood floors, hollow tile, passenger and freight elevators, roof ventilators, waterproofing and dampproofing, vacuum heat, electric light, metal lath, tile and marble work, rolled steel sash and skylights, fire doors, vault lights, ornamental iron work. Plans in progress. Architect will take bids in one week.

(Continued from page 100)

rather than upon efficient construction service. Such a condition was found by the Interdepartmental Board to prevail with respect to Government contracts and a like situation appears to exist in the forty-eight states engaged in highway construction.

This condition is by no means the fault of state highway engineers, but is rather a heritage left them by more or less well meaning politicians, aided and abetted by the legal mind. Neither of these has been accused of long range vision in matters of sound economics, but they have blindly sought to gain the utmost for an individual interest without actually reckoning the cost. Therefore, the State Highway Departments are faced with the same problem that faced the Interdepartmental Board; namely to find a means whereby they can protect the interest of the state without smashing the accepted rules of business and losing the benefit of intelligent competition. Competition of one sort, they have had in abundance, but ignorant competition by inexperienced concerns has about demonstrated its uselessness to those who buy as well as to those who sell; and it is probable that no one will bear more ready testimony to this fact than the highway engineer.

As one reads through the various contract forms used for highways and other public works construction, it is almost possible to trace certain provisions back to certain legal decisions against the state which prompted the inclusion of these provisions. Often some special condition has arisen which was not contemplated by the contract and probably could not have been foreseen and which therefore, resulted in a claim for compensation. As public agencies naturally do not desire to pay such extras they have frequently tried to spike all claims through the use of some special provision. In this manner public contracts have been cluttered up with innumerable provisions ordinarily unnecessary, but which inevitably add to the cost of construction as well as to the hazard involved.

Stern protective clauses in the public contracts are undoubtedly necessary, but before such clauses are incorporated cognizance should be taken of one very important point, namely, that once these clauses are included there, action generally becomes not optional with the pub-

lic official, but mandatory. Under such circumstances, he finds himself often obliged to carry out the letter of the contract in a manner that he knows to be inequitable, but which he is duty bound to follow.

Drastic protective clauses of this nature are frequently found in railroad construction contracts, but the freedom exercised by the railroad engineer in making adjustments and administering the work in accordance with his judgment has rendered them inactive. However, in a public contract where such clauses are usually mandatory they are bound to increase the cost of doing business.

Within recent years, some cognizance has been taken of the fact that construction costs are inseparately linked with the form of contract governing execution of the work; this is due in great part to the two distinctive functions rendered by construction companies, namely, that actually executing the projects and that of insuring the owner against many contingencies which no construction company can control. It may be that this dual function of the contractor is an advisable combination, but viewing it merely from the angle of construction costs, it constitutes an expensive procedure. If some pioneer engineer were to separate these contingencies in his mind from the actual cost, let the state assume those most remote as a possible occurrence, then call for bids for the actual construction work and another bid for assuming the contingencies, he would probably find that the cost of constructing highways as well as the prices bid, had materially declined.

This phase of the contract proposition, however, is somewhat aside from the matter of uniform documents. The intention of this discussion is not to touch upon those points wherein practically all highway contracts could well be modified but rather to treat of the irregularities and differences that constitute a derogatory influence. By this is meant the use of a particular stipulation in one state and not in another which makes construction work in one of them less attractive to a responsible company.

An illustration of this point is afforded by a certain contract provision now used in a number of states, but which has been discarded in others. It states that the quantities upon which the contractor is to bid are only approximate and for the purpose of comparing proposals, and that the state reserves the right to increase or decrease the quantities as it sees fit or to omit any of them altogether.

As each unit of work must carry its proportional share of overhead, the omission of any of these items means that whatever overhead was distributed to such items in the estimate will stand as direct loss to the construction company.

In other words, the bidder is required not only to guarantee the accuracy of the department's estimate, but is also required to gamble on whether the department will change its mind and eliminate a portion of the work.

In some states it has been recognized that this sort of a stipulation necessitates a contingency allowance or that protection must be sought otherwise in the so-called unbalanced bid. Consequently they have limited the amount that the work can be changed without a correction of unit price.

Assuming for the sake of illustration that the state of Illinois has the unqualified provision mentioned and that the state of Indiana guarantees the accuracy of estimates and guarantees that it will perform the work shown in the proposal. The Indiana contract will then eliminate the contingent charge and the construction company has to contend merely with the physical problems of the work so far as this particular provision is concerned. The obvious tendency would be for contractors to seek work in those states where they were obliged to do the least amount of gambling.

There are probably twenty other common highway provisions which react in the manner here cited, against the deflation of construction costs. Some states separate maintenance from construction and accept the work by sections when completed. This practice, like reduction of retained percentage to a safe minimum, cuts down interest charges and also reduces the actual working force required. Some states make adjustments for delays which their own actions occasion wiping out another intangible expense. Materials delivered are paid for in a considerable number of states, thus encouraging accumulation of stocks and continuous operations. To these points may be added numerous others which have been under discussion by engineers and contractors for the past three years.

An important step toward unifying practice in these matters was taken at Kansas City about a year ago when a committee of the American Association of State Highway Officials and one of the Associated General Contractors after investigating the economics involved made joint recommendations upon some twenty-five or thirty points relating to contracting practices. From the engineer's point of view adoption of these principles would benefit the state, not only by solving certain difficulties of administration, but also by effecting a reduction of cost. In the report issued by the Joint Committee, every principle is accompanied by a statement of the reason for its approval which in every case is one of economics. Though this declaration of principles represents but a step toward standardization so far, it could through universal applica-

tion produce considerable uniformity in highway contracts.

If state highway contracts could be formulated in every state from provisions that have been subject to the test of sound economics as well as the test of law, it would undoubtedly encourage efficiency and increase the longevity of those companies engaged in construction. The death rates of these companies is in no small measure due to the different governing principles encountered when they attempt to carry on work in a state with which they are unfamiliar, and a new flock of road builders every season does not reduce the cost of roads.

At the present time construction companies building highways are, in effect, engaged in interstate commerce. Numerous variations in the rules of business which they encounter in the different states create a doubt as to the actual requirements of the different localities and retards the progress of accurate estimating and accounting. Many engineering contracts and possibly highway contracts contain provisions contrary to the common law and which will not stand before a court. These clauses encourage irresponsible companies to create dissension and attempt a legal battle that may be won on a technicality. It would seem in the interest of a state for highway engineers to cast out any uneconomic requirements of specification and to establish uniform contractual relations. Contractors could then operate freely in new territory, without running amuck with unusual local requirements as now commonly occurs.

To accomplish this, might necessitate changes of contract provisions which in certain states appear necessary for adequate protection. If this be the case, the problem is then to find a means whereby responsible companies can deal with the departments as they deal with other industries, so long as their obligations are executed in good faith.

It will necessitate providing a means whereby the department may protect itself against bad faith in a manner swift and sure. In other words an effort should be made through the administration and through the contract forms to make this highway industry an attractive field for the right sort of operators and to eliminate swiftly and surely the man who attempts to dodge his obligations. This can be brought about to a great extent by uniform contracting principles, which most certainly will constitute a public service.

There is another side to this question, however, which is probably as important as the factor of economics. Uniform contracts would tend to establish customs and precedents in contractual relations that would serve in much the same capacity as a body of common law. They

would constitute a practical code which would become generally known to contractors professional men and to some extent by the public and would enable all parties to more clearly understand the obligations they must perform and a performance that they have a right to expect.

In so far as highways construction is concerned, there appears no sound reason for continuing a multitude of different obligations covering the same type of work except of course where existing statutes interfere. In fact, there is no useful purpose served by the multiplicity of state construction laws. Many of these statutes, like regulations in the Government bureaus, have long ago served their usefulness, could profitably be revised or repealed.

It is unfortunate that the construction world has not long ago formulated its code of contracting practices, but at the same time it is fortunate that nine large national associations of engineers, architects and contractors, operating through the Joint Conference on Standard Construction Contracts at Washington has practically reached an agreement on such a code. For over two years this body has been working on the subject and within the present year is expected to give the results of its labors to the public.

Even before the Joint Conference had reached agreement on all major points involved it furnished valuable assistance to the Government in enunciating sound principles. The mature thought of this conference, could also with active support from highway departments, formulate sound contracting practice for highways and other public construction. The American Association of State Highway Officials has been participating in the conference and throughout the sessions its representatives have given the benefit of their judgment from the view point of highway officials.

No attempt has yet been made to formulate a contract for public works, but if highway officials will undertake this task either through the joint conference at Washington or their own association, they will pave the way for an important public service.

---

Charles G. Schweiker, R. A., (Architect), has removed from 33 N. Felton St., Philadelphia, to 29 Garfield Ave., Manoa Heights, Delaware Co., Pa.

## As The Editor Sees It

### FIRE RESISTIVE HOUSES A PRESENT REALITY

*Address at the First National Fire Prevention Congress, New York, N. Y.,  
by Wharton Clay, Architectural Engineer,  
Member of the Building Construction Committee,  
National Fire Protection Association.*

If an architect and engineer and a criminal incendiary should get their heads together, they could hardly devise a better construction for rapid destruction by fire than the present residence or apartment building with lumber joists, studs and ordinary lath. Even the plaster, which is incombustible itself, and would be considered a fire protection of high order, aids in making a series of chimneys to aid in the draft, and when this plaster is installed, as is customary, the entire interior of the chimney is lined with small pieces of rough wood easily ignited, and which communicate a fire with incredible speed throughout the structure. This does not mean that lumber must be eliminated to make houses fire-safe, but to make them fire-safe, the lumber must be protected in a manner different from the present custom and the myriad of small pieces of wood must be eliminated.

It seems strange that the design of fire-resistive construction should have started at the top and worked downward to the residence. It is strange that city

ordinances give more consideration to the protection of the lives of transients within their boundaries living in hotels than is given to their own citizens whose lives are in constant peril in houses that strictly conform to all the laws. It is strange that a man will demand a fire-proof vault to store a few bonds and stocks, some of which prove to be worthless sheets of paper, and at the same time will leave home light-heartedly with his dearest possessions soundly asleep in a tinder box, which, on the slightest spark will in a few moments be hopelessly involved in a rapidly enveloping fire. In fact, the modern house, if constructed scientifically at all is constructed to permit the most rapid spread of flames that possibly could be arranged.

Lumber construction, because of its great strength, ease of cutting and fitting and the familiarity of the workmen with it is the most economical material on the market today with which houses can be constructed. Attempts have been made to produce fire-resistive houses with other materials, but they have always ended in financial disappointment because of the extra burden it places upon the home owner. There is another reason, too, why incombustible materials have not appealed to the home owner. We are creatures of habit, and are familiar with wood and appreciate its beauty. We do not like to see the cold floors and do not readily respond to a different form

of construction. Fortunately, there is no need for this, for within our grasp and within our pocketbook lie materials which will make the fire-resistive home a present reality. In fact, there are many that have been built throughout the length and breadth of this land, and their safety has frequently been tested by actual fires, which, obtaining a start, are stopped before they gain headway.

Metal lath as a protection for lumber solves the problem as no other material does. It does not change our habits of constructing the building, it does not hamper the speed of erection and it does not add greatly to the cost. It even lessens the burden on the pocketbook of the householder, because it reduces the depreciation and upkeep expense cost to a greater extent than it increases the original investment.

For over thirty years, expanded metal lath has been known to the general building public as a fire-resistive material. Notable examples of its fire-stopping qualities have appeared from time to time. On the other hand, hundreds and even thousands of houses constructed in the ordinary manner burn down yearly, and we thoughtlessly let them pass without inquiring into the basic reasons why houses should be so rapidly consumed and take with them so many precious lives.

The true measure of the fire-resistive value of expanded metal lath as a pro-

Philadelphia  
KEYSTONE PHONE, RACE 3519

**BLUE  
PRINTS**

tection for wood was not known until a short time ago; but on the anniversary of Fire Prevention Day, 1922, the Underwriters' Laboratories announced that a wood-studded partition plastered on both sides by metal lath and plaster, and an ordinary wood-stud floor as commonly constructed, but protected on the under side with metal lath and plaster would resist the intense heat of their Standard Fire Test for over one hour and remain intact and carry its load beyond that period. Shortly thereafter, they announced that ordinarily lath and plaster would expose the wood behind it, under the same conditions, in about four minutes. Here, then, lies the secret of the immense life and fire loss in residence construction in America.

Fire preventionists have pointed out the comparison between the fire losses in Europe and America and have attributed it to greater use of incombustible exterior walls in Europe and the common use of frame construction in America. Even the statistics of fires in this country are disregarded when such a conclusion is reached, for we find in the report of the Committee on Statistics on Origin of Fires, dated May 22, 1919, and issued by the National Board of Fire Underwriters, that in the column headed, "Percent of Fires Confined to Building or Place of Origin" that the percentage runs in the following manner: 99, 91, 98, 98, 97, 94, 100, 96, etc., giving a grand average for every report city in the United States, a figure about 96 per cent.

In other words, the fire hazard in America is not due to the spread of fire such as the exterior walls might have some control over, but is due almost entirely to the fires which start in certain buildings and involve that building alone. That is, the interior construction represents 96 per cent. of all the fire loss, and the control of this 96 per cent. of the fire loss in this country must be the object of the thought placed on improved construction. External construction concerns only 4 per cent. of the fires, therefore, it is strange that we have given so much consideration to the 4 per cent. and so little consideration to the 96 per cent.

Insurance bodies and Fire Preventionists have given more consideration to the wood shingle than they have given to the wood lath. In many places they have legislated against wood shingles which are a most economical and beautiful roof treatment, when not more than 2 per cent. of all the fires in the country can possibly be attributed to conflagrations involving more than two buildings at a time and they have neglected to provide safety from internal fires which form 96 per cent. of the hazard. They have given large credits for incombustible exterior walls and they have allowed ordinary window glass to be put in windows, vitiating

entirely the undoubted safety of the wall itself, and from an engineering standpoint, have neglected the adage that a "chain is only as strong as its weakest link." It is true that a stucco-covered frame structure would be more fire-resistant than the same structure covered with siding, but a conflagration will enter the brick building as quickly as the frame building.

My purpose is not to object to giving credits where credits are due. It is to bring before this Fire Prevention Congress a plea to properly weigh and measure the fire-resistive advantage that better interior construction will provide over a period of years.

Not only does expanded metal lath and plaster resist the fire which is endeavoring to break through the plaster coating and get to the interior of partitions, but any fire which originates inside of a partition has little to feed on with expanded metal lath and plaster on two sides and a flat piece of wood studding whose edges are embedded in plaster as the other two boundaries. True, this wood can ignite, but the horizontal bridging almost universally placed midway between floor and ceiling of these partitions and walls confines such a fire within a very small bulkhead, and fire stops can also be placed at the floor levels to further reduce the chances of spread of fire. The condition inside of a partition, lined with ordinary rough lath of ideal size for starting a fire, is apparent.

It is therefore, not necessary to depart from the time-honored wood stud and wood joist construction, whether surrounded by a masonry wall or a wood-studded wall covered by either wood siding or stucco, in order to obtain a fire-resistive interior that will give ample protection for the large majority of fires which statistics show are likely to involve the interiors.

There is a type of partially protected fire-resistive construction which will give the greatest protection for the least extra cost. These are houses which are "built like a battleship," in which the expanded metal lath is used to protect the most vulnerable points, as the battleship designer puts the heaviest armour around the turrets and around the boilers. These vulnerable parts are:

1. On all stud bearing partitions and walls and fire stops between studs. (Fire stops to be metal lath basket-shaped to fit between studs, coated with plaster or cement and filled with incombustible materials.)
2. On ceilings under inhabited floors, especially over heating plants and coal bins.
3. At chimney breasts, around flues and back of kitchen ranges.

(Continued on Page 128)

# Advance Construction News

CONTEMPLATED CONSTRUCTION: ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS;  
CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Supplies**, Philadelphia. Owners, Board of Education, Nineteenth above Chestnut street, Mahlon H. Savage, Superintendent of Supplies. Roxboro High School, cabinet work. Steel locker, tables, portable blackboards, cable, gas ranges, etc. Owners taking bids due March 6th at noon.

**Residences (10)**, Buist avenue and Eightieth street, Philadelphia. Architects, R. R. Neely and E. William Martin, 2301 Spruce street, Philadelphia. Owner, A. Middleton, 2425 Pine street, Philadelphia. Brick, 2 stories, 15x40 feet, slag roof, composition and pine floors, hot water heat, electric light. Owner ready for sub-bids.

**Church and Sunday School**, Fischers avenue and First street, Olney, Philadelphia. Architects, Ritcher & Eiler, Reading, Pa. Owners, Zion Lutheran Church, Rev. B. Shetlock, 117 East Tabor road. Brick, cast stone, stone, steel, 1 story, basement and balcony, 118x71 feet, slate, built-up roof, cement, maple, linoleum floors, steam heat, electric light, metal lath, hollow metal doors, bond, floor hardener, ornamental iron work, shoring, waterproofing, metal ceilings. (Alterations on terra cotta, wood ceiling, cork tile.) Owners taking bids due March 1st.

**Chapel and School Building**, Germantown, Philadelphia. Architect, Peter F. Getz, 1634 North Sixth street, Philadelphia. Owners, St. Benedict's Roman Catholic Church, Rev. W. C. Farrell, Cheltenham avenue, Germantown. Plans in progress. Too early for details.

**Store and Apartment**, Girard avenue near Sixty-second street, Philadelphia. Architects, R. R. Neely and E. William Martin, 2301 Spruce street, Philadelphia. Owner, name withheld. Brick, 2 stories, hot water heat, electric light, plate glass, painting, carpentry and mill work, metal bulks. Architects will be ready for bids in a few days.

**Church**, Cobb's Creek Boulevard and Cedar avenue, Philadelphia. Architects, Hoffman & Henon, Finance Building, Philadelphia. Owners, St. Carthage Roman Catholic Church, Rev. P. F. O'Neill, on premises. Stone, steam heat, electric light, slate roof, tile and marble. Ready for bids (general) in one week.

**Residence (alts. and add.)**, 212 East Gowan avenue, Mt. Airy, Pa. Architect, William C. Prickett, 225 South Sixth street, Philadelphia.

Owner, Joseph A. Short, care of architect. (Plumbing, oak floors, heating separate bids.) Slate roof repairs, carpentry and mill work, stone work, cut stone, cement and concrete, plastering, carpentry and mill work, electric light, metal lath, tile work. Architect taking bids due February 23rd.

**Residence**, Oak Road, between Midvale and School Lane, Philadelphia. Architect, Carl A. Ziegler, 1309 Locust street, Philadelphia. Owner, Richard T. Brown, Wayne and Roberts avenue, Philadelphia. Architect taking bids.

**Bank Building, Stores (2)**, Southwest Corner Eighteenth and Fairmount avenue, Philadelphia. Architect, W. Macy Stanton; Engineer, S. H. Pennell, 1524 Chestnut street, Philadelphia. Owners, Mortgage Security Trust Co., care of architect. Brick, granite, Indiana limestone, 1 story and mezzanine, 40x80 feet, steam heat, electric light, tile and marble work, rolled steel sash, bank screens, metal bulks, ornamental iron work, vault, oil-burning equipment, pine floors, slag roof. Plans in progress.

**Apartment House**, Germantown, Philadelphia. Architect, William F. B. Koelle, Otis Building, Philadelphia. Owner, name withheld. Brick, 3 stories (6 apartments), 50x200 feet, slag roof, hardwood, composition, mineral floors, hot water heat, electric light, tile and marble work. Plans in progress.

**Factory**, location withheld, Philadelphia. Architect, F. V. Nickels, 15 South Twenty-first street, Philadelphia. Owner, name withheld. Brick, concrete and steel, 4 stories, 70x200 feet, slag roof, steam heat, electric light, cement floors, elevators. Preliminary plans in progress.

**Factory Building**, location withheld, Philadelphia. Architect, Frank V. Nickels, 15 South Twenty-first street, Philadelphia. Owner, name withheld. Brick, concrete and steel, 4 stories and basement, 60x188 feet, slag roof, cement floors, steam heat, electric light, elevators. Preliminary plans in progress.

**Manufacturing Building**, location withheld, Philadelphia. Architect, Frank V. Nickels, 15 South Twenty-first street, Philadelphia. Owner, name withheld. Brick, stone, steel, concrete, 8 stories, 150x102 feet. Preliminary plans in progress.

**Church**, Greene and Logan streets, Germantown, Philadelphia. Architect, F. Ferdinand Durang, 1220 Locust street, Philadelphia. Owners, St. Francis of Assisi, Rev. J. D. Nevun, on premises. Plans in progress. Too early for details.

**Administration Building**, Oxford Pike and Saul street, Frankford. Architects, Magaziner, Eberhard & Harris, 603 Chestnut street, Philadelphia. Owners, Y. W. C. A., Miss Dorothy Morgan, Morris Building, Philadelphia. Work contemplated. Preliminary plans drawn.

**Office Building**, Broad and Arch streets, Philadelphia. Architect, not yet selected. Owners, Liberty Title & Trust Co., J. N. Fort, Jr., president, on premises. Eighteen stories. Details undecided. Contemplated.

**Bath Houses (2)**, C and Westmoreland streets, 2601-13 South street. City architect, John Molitor, 1211 Chestnut street, Philadelphia. Owners, Department of Public Welfare, City Hall, Philadelphia. Plans in progress.

**Alterations**, 1229 Ellsworth street, Philadelphia. Architect, M. Capobianco, 721 Walnut street, Philadelphia. Owner, Michael Barallo, on premises. Carpentry and mill work, brick work, stone work, painting and glazing, electric light, plastering, plumbing. Owner will build.

**Road Work,** Delaware. Owners, State Highway Department, Dover, Delaware. Owners taking bids due March 12th at 2 P. M.

Contract No. 37-A, R. C. Bridge at Drawyers. Excavation, concrete reinforcement, piling, sheet piling.

Contract No. CN-14, Walker-Deakyneville, 1,775 miles. Excavation, borrow, broken stone, base course, concrete, reinforcement, pipe, concrete gutter, guard rail, curb.

Contract No. CN-15, Mt. Pleasant-Summit Bridge, 2.27 miles. Excavation, borrow, broken stone base course, cement concrete pavement, slag, pipe, shoulder curb.

Contract No. CK-17, through Frederica, 0.507 miles. Excavation, cement concrete pavement, slag cement concrete, Class A concrete, reinforcement, R. C. pipe.

Contract No. CK-20, Walnut street, Milford, 1.01 miles. Excavation, sub-base, cement concrete pavement, slag cement pavement, Class A concrete, R. C. pipe.

Contract No. CS-30, Wescoats Corner-Rehoboth, 75.75 miles. Clearing, grubbing, excavation, borrow, broken stone base course, cement concrete pavement, Class A concrete, reinforcement, R. C. pipe, wire cable guard rail, wood shoulder curb.

Contract No. CS-31, Bethel-Broad Creek, 2.43 miles. Excavation, borrow, broken stone

base course, cement concrete pavement, slag cement pavement, Class A concrete, reinforcement, R. C. pipe, wood shoulder curb.

Bond required. Deposit of \$10.00 required, which will be refunded upon receipt of plans in good condition.

## Delaware Contracts Awarded

**Industrial School**, Marshalton, near Wilmington, Del. Architects, Price & Walton, 149 South Fourth street, Philadelphia. Owners, Colored Girls' Institute, Wilmington, Del. Brick and stone, cement work, plastering, asbestos shingle roof, carpentry and mill work, pine floors, hardware, painting and glazing, electric work, canvass floors, 2½ stories, 35x50 feet. Contract awarded W. D. Haddock & Co., Wilmington, Del.

## Miscellaneous Construction News

**Sunday School and Chapel**, Winchester, Va. Architects, Ritcher & Eiler, 147 North Fifth street, Reading, Pa. Owners, Grace Lutheran Church, Rev. A. A. Kelly, Winchester, Va. Brick, 1 story and basement, 50x98 feet, slag roof, hardwood floors, vapor heat, electric light. Owners taking bids due March 1st.

**Lyon Hall Dormitory**, Utica, N. Y. Architects, Day & Klauder, Franklin Bank Building, Philadelphia. Owners, Cornell University, Utica, N. Y. All bids rejected. New bids will be taken later.

## Proposals

Sealed Proposals will be received by the School District of the City of Easton, Pa., at the office of the Secretary, 30 North Second Street, until Monday, March 24th, 1924, 8 P. M., for the construction of a Senior High School Building at Northampton, Twelfth and Spring Garden Streets, City of Easton, Pa., in accordance with plans and specifications prepared by Messrs. Michler and Shnyder, Easton, Pa., and on file at their office, 610 Drake Building.

Separate bids will be received for the following:

- (A) General Contract.
- (B) Heating and Ventilating.
- (C) Plumbing.
- (D) Electrical.

Plans and specifications for the above can be obtained at the office of William M. Michler, 610 Drake Building, Easton, Pa. A deposit of fifty dollars (\$50) will be required for the use of plans, specifications, and etc. Plans and specifications to be returned in good condition with bid when deposit will be refunded. All bids to be accompanied by a certified check payable to the order of the Easton School District for an amount equal to 2% of the amount of the bid submitted. Certified checks to be returned to all excepting the two lowest bidders immediately after the award of the contract. Checks of the lowest bidders to be retained until contract is signed and satisfactory bond furnished.

Proposals to be made on form provided by the architects for that purpose and addressed to the Easton School District, Attention R. E. Peifer, Secretary, 2nd and Church Streets,

Easton, Pa. All bids to be sealed and marked on outside,

### "PROPOSALS FOR CONSTRUCTION OF SENIOR HIGH SCHOOL."

The Easton School District reserves the right to reject any or all bids or part of any bid submitted.

Easton School District,  
F. T. Clark, President.

Attest:  
R. E. Peifer, Secretary.

(Continued from Page 116)

- 4. For stair-wells and understairs.
- 5. Exterior walls.

These are the position in which the greatest probability of fire exists or the positions in which fire, if it does start, will do the greatest and quickest damage. While this is not an ideal or ultimate solution, its encouragement is a step in the right direction, and on account of the slight additional expense and the crack-resisting advantages can be more quickly advanced than complete protection.

Fire resistive houses are a present reality. They simply have not been recognized.

A house is being built in one of the suburbs of Chicago as a model of this type of construction. It is being built with the purpose of calling to the attention of the fire prevention world that a fire-resistive house can be built at little extra cost, along the most artistic lines, without deviating in the least from the requirements of the modern housewife as to exterior appearance or internal beauty. In fact, this house will be free from upkeep expense of repairing plaster cracks redecorating wall surfaces because of stains or dust marks following the contour of ordinary lath, and will be absolutely safe for the lives of the children who are to live in it. The extra cost will be not more than 2 per cent. of the cost of the building.

Fire resistive houses of this general type exist in many communities, but they are not recognized for their intrinsic value, and they are not encouraged by the insurance fraternity whose powerful influence could do so much to bring a realization of the lessened risk by adequate compensation through reduced rates.

The house I mentioned here has expanded metal lath covering the underside of all floors and both sides of all partitions and walls. The built-in garage is separated completely from the house by this one-hour rated construction and there is only the smallest possible chance that any fire, however started, could gain headway fast enough to get out of control.

The insurance world has given great thought to the question of conflagration, but they have considered conflagration only in the terms of a multiplicity of buildings. There is no reason why they

should not take the page from the experience of the Naval engineers and encourage a form of design which will make it impossible for any fire to get out of its room of origin for one hour. The Naval architects analyzing their problem found that when a leak occurred in the hull of a vessel, that the whole vessel was doomed. They, therefore, developed a system of bulkheads which makes each compartment so water-tight that the vessel will float even if an entire compartment is filled with water. Fire prevention engineers have recognized this same principle in large buildings where they have built fire walls, equipping each opening with automatic self-closing doors, and the same engineering principles can be adopted in the modest dwelling. Conflagration of the entire structure can be reduced to the burning out of a single room or compartment. The fires would hereafter be reduced in total damage to the damage in the room of origin only.

We have great hope of the efficiency of fire prevention as taught in the public schools by the elimination of carelessness in the mind of the American youth, but any of you who have children agree with me that the American youth is very careless and will continue to be so, but probably not nearly as careless as the American adult. Much can be gained by this propaganda, but it is a long process that may and may not bring the desired reduction in fire losses. One thing is certain—built-in fire protection is a constant protection, and fires which originate, outside of all human carelessness, can only be stopped by built-in protection.

Therefore, I say that fire-resistive houses are at present a reality. Their recognition is but a matter of right thinking along the engineering principles, weighing the relative duration of metal lath protected wood construction against the duration of construction as ordinarily built with rapidly inflammable lath, and properly considering the relatively great importance of interior fire protection against the small amount of external hazard.

Fifty years ago the grocer set out a keg of mackerel and a box of kindling wood, and sat down to wait for customers. Today he carries street-car and newspaper advertising and dresses his windows as smartly as the department store. If it didn't pay he'd still be sitting behind the stove waiting for customers with a mackerel keg out front doing service for a sign.

You know what propaganda is, don't you? You know, too, how effective a weapon it is, if used properly, don't you? Well, advertising—honest, fair advertising—is the best propaganda we know of. Join the propagandists now! Advertise in the "Builders' Guide."

## As The Editor Sees It

### 1924 CONSTRUCTION PROSPECTS *U. S. Department of Labor Report In- dicates Period of High Activity is Soon to be Entered by Con- struction Industry*

The construction industry generally may rest well assured that predictions of a large volume of activity in 1924 will soon be proved as having been correctly made. This is the indication drawn from the results of a special survey of local conditions in 44 states made by the U. S. Department of Labor, based on information received from federal state directors of the Employment Service and Commissioners of Labor. The survey shows present employment conditions throughout the country and outlines the prospects which may be expected to materialize during the months occupying the immediate future.

A summary showing conditions as reported in each state follows:

ALABAMA—No extraordinary demand for skilled labor, although indications point to as good a year as 1923, if not better, in 1924.

ARIZONA—Considerable road building planned by various counties when weather permits and funds become available. ARKANSAS—Road construction now started all over the state, following installation of new highway law. Large home building program under way. CALIFORNIA—Building construction continues on tremendous scale. Estimate

\$15,000,000 to be spent on road construction in 1924. CONNECTICUT—Building and road work slackened by seasonal curtailment. Builders well employed, however. COLORADO—Municipal and highway construction continues steadily, with much new work contemplated. DISTRICT OF COLUMBIA—Large building program shows signs of curtailment. Optimistic outlook for 1924. FLORIDA—Common labor in demand for large highway construction projects, with greater demand for skilled mechanics than in 1923. GEORGIA—Large number of skilled and unskilled labor in demand for road construction. Building program not as large as last year.

IDAHO—Building and other construction projects to continue, with increase seen in larger cities. The supply of common labor available will take care of highway work contemplated. ILLINOIS—Building continues, and program for roads calls for large labor demand. IOWA—Seasonal curtailment has cut municipal, state road and building construction. Industrial outlook excellent for 1924. Highway construction, which has been delayed for several years, will show a marked increase. KANSAS—Let up expected in building program, although unemployment is not expected. KENTUCKY—Large building operations planned, with more road construction than ever before; unemployment very apparent throughout state now.

LOUISIANA—Various cities will continue building projects, with continuance of good roads program giving work to large number of common labor. MAINE—Heavy building construction will continue, with full time employment of bridge and road workers. MARYLAND—Indications point to continued upward trend of industrial employment.

MASSACHUSETTS—Building and highway construction to continue actively, with exception of winter interruption. Demand for building and road construction mechanics expected to exceed 1923. MISSISSIPPI—State projects, consisting of road and other construction, are expected to continue on a huge scale, providing unlimited employment of skilled and unskilled labor. MISSOURI—Large building program and state road work will continue on a great scale. MONTANA—Expansion of building construction projects predicted for 1924. NEBRASKA—Plans big building program with more than 400 miles state highway grading, providing present plans are carried out. NEVADA—Building program on same scale as 1923. About 223 miles of road construction to be started. Employment situation satisfactory. NEW HAMPSHIRE—Prospects good for continued building activity. No present problem of unemployment. NEW JERSEY—State will continue huge road construction and building projects make outlook for 1924

**DRAWING

bright. NEW YORK—Contemplated building projects already exceed those planned in 1923. Road work and municipal improvement plans will employ a large number of various classes of labor.

NORTH CAROLINA—New construction will exceed 1923, with larger building programs in various centers. Road construction will be an important item for 1924, following completion in 1923 of hundreds of miles of highway. NORTH DAKOTA—Less activity in construction than in 1923, due to completion of program. OHIO—Road construction will continue, and contemplated work will employ a large volume of skilled and unskilled labor. OKLAHOMA—Considerable work predicted in furtherance of the good roads program. OREGON—Building construction was good in 1923 and indications point equally active year in 1924. Road making will come close to that of last year. PENNSYLVANIA—Continuation and expansion of good roads program will take care of tremendous amount of skilled and unskilled labor. RHODE ISLAND—Very little unemployment apparent in any section. SOUTH CAROLINA—Building projects of considerable size have started, adding to the large program now under way. Road construction will give employment to a large number of skilled and unskilled labor. TENNESSEE—Considerable building is already under way and many new projects are contemplated. These, when started, will take care of practically all labor. SOUTH DAKOTA—Large building and road construction projects will continue, and work will commence as soon as weather permits.

TEXAS—Building activity continues unabated, particularly with stone, brick and cement projects. Craftsmen in these trades are virtually absorbed. UTAH—Contemplated building work will employ a large number of tradesmen, while road construction will continue to give employment to many common laborers. VERMONT—Construction of buildings, which has been curtailed by winter, will pick up soon. Indication points to a better year than 1923. VIRGINIA—Tradesmen and mechanics in building construction in the larger cities are very well employed. WASHINGTON—Good prospects for building construction, with indications pointing to as good a year as 1923. WEST VIRGINIA—More labor employed in 1923 in road work than any previous year in history of state. Building tradesmen will be well employed. WISCONSIN—Building construction not expected to be as extensive as 1923. Highway work will call for more labor, it is predicted, than in 1923. WYOMING—Housing shortage will keep this form of construction brisk. Work on road construction is to continue

and will afford a large amount of employment.

#### A NEW HOTEL IN YOUR TOWN V. Cost and Financing Considerations

*An important installment in this interesting series which is showing the pitfalls into which the new hotel may slip and how to guard against them.*

By W. L. STODDART, Architect.

*Reprinted through the courtesy of "Hotel Management"*

My previous articles in this series have discussed the preliminary motions through which the business men in a city should go in launching a new hotel project; the determination of the hotel's size; the selection of its site and the question of building it in such a way that it will best meet the city's requirements.

Concurrent with all of these problems are the cost and financing considerations. It is, of course, impossible to proceed very far in a new undertaking of this character without some idea as to how much it will cost. But at the same time it is impossible to tell the prospective stockholders and bankers how much it will cost until its location, size and type have been determined. Furthermore, it is obviously futile to proceed with the plans until the above points have been definitely determined, and until the hotel's board of directors are convinced that it will be possible to raise the necessary funds.

But by first determining a site for the new hotel, and by fixing for it a size and type that is the ideal toward which the city should strive, the board of directors can be far better assured of raising the the sum required—because they will then have a definite proposal to present to the local business men and bankers—than they would were they to take the attitude "Blanktown needs a new hotel. Let's see how much we can raise, and build it accordingly."

Of course, it has often been found impossible to raise the sum that would be required to build the ideal hotel above referred to, but, nevertheless, it has been my experience that when the board has a definite proposition to offer before they attempt to raise the money, their success has been far better assured than when they have proceeded without such plans to help them.

Let us first take up the problem of costs, bearing in mind the fact that the following statements (and also those that I will touch on later in connection with financing methods) are applicable only to the typical, first class, fireproof hotel of from 100 to 300 rooms that is primarily commercial in character and that is located in the medium size city.

*The Site's Relation to the Cost Problem*  
The first cost is naturally that of the

Owners taking bids due March 11th at 10 A. M.

## Proposals

Sealed Proposals will be received by the School District of the City of Easton, Pa., at the office of the Secretary, 30 North Second Street, until Monday, March 24th, 1924, 8 P. M., for the construction of a Senior High School Building at Northampton, Twelfth and Spring Garden Streets, City of Easton, Pa., in accordance with plans and specifications prepared by Messrs. Michler and Shnyder, Easton, Pa., and on file at their office, 610 Drake Building.

Separate bids will be received for the following:

- (A) General Contract.
- (B) Heating and Ventilating.
- (C) Plumbing.
- (D) Electrical.

Plans and specifications for the above can be obtained at the office of William M. Michler, 610 Drake Building, Easton, Pa. A deposit of fifty dollars (\$50) will be required for the use of plans, specifications, and etc. Plans and specifications to be returned in good condition with bid when deposit will be refunded. All bids to be accompanied by a certified check payable to the order of the Easton School District for an amount equal to 2% of the amount of the bid submitted. Certified checks to be returned to all excepting the two lowest bidders immediately after the award of the contract. Checks of the lowest bidders to be retained until contract is signed and satisfactory bond furnished.

Proposals to be made on form provided by the architects for that purpose and addressed to the Easton School District, Attention R. E. Peifer, Secretary, 2nd and Church Streets, Easton, Pa. All bids to be sealed and marked on outside,

### "PROPOSALS FOR CONSTRUCTION OF SENIOR HIGH SCHOOL."

The Easton School District reserves the right to reject any or all bids or part of any bid submitted.

Easton School District,  
F. T. Clark, President.

Attest:

R. E. Peifer, Secretary.

Want to hear from owner having farm for sale; give particulars and lowest price. John J. Black, Chippewa Falls, Wisconsin.

(Continued from page 132)

new hotel's site and although it is impossible to present any definite formula or set of figures that will show what the site of any given hotel of any given size in any given section of a city will cost, it is really not necessary to do so. This cost item should be regarded as an investment that appreciates in value, rather than as an expense. I mean by this that the income from the new hotel's ground floor rentals should more than make up for the carrying charges on the property, and that for this reason its cost is of minor consideration. As a matter of fact, it is in most cases safe to count on a 10% return on this investment, whereas the carrying charges seldom amount to more than 6% or 7%. Remember, too, that no matter how badly the new hotel's room and restaurant revenues fluctuate, this 10% income from ground rents is practically always assured—a point which is not only of definite value to the proprietor and manager, but also one that is essential if it is the owner's intention to arrange for a first mortgage loan. Reliable loaning companies will never advance funds unless they are convinced that the new hotel's site is a desirable one from the standpoint of leasing a generous amount of the first floor space to stores and other concessions. The above means, in other words, that the best site should be selected from the standpoint of ground rentals, the only limiting factor being to see to it that the cost of the property is not out of line with surrounding property values.

#### *Cubic Foot Cost the Only Sound Basis*

There has been a great deal of inexperienced discussion as to what a new hotel will cost on a per room basis. Strictly speaking, the phrase, "cost per room" means nothing. The cost is different in every hotel because in no two hotels do identically the same proportions exist between the amount of space devoted to bed rooms, public rooms and service quarters, and because the costs of building these three groups are different. For example, a 150-room hotel (every room with bath), and with the necessary public and service space to permit of future expansion; will cost considerably more per room because of these conditions than will a 250-room hotel. This is due to the fact that in the larger establishment the number of bed rooms are better proportioned to the public and service rooms and that therefore the cost per room will be much less than in the smaller hotel.

The only scientific basis on which to discuss hotel construction costs is that of the cubic foot contents of the building. The cost per cubic foot will, of course, vary somewhat with the architectural treatment and with the design and materials used in construction and finish, but in any one year of building construction

the same type of hotel will seldom fluctuate more than from one to three cents per cubic foot.

Building costs are in all cases considered not to include architects' fees or carrying charges.

Since the year 1914 (which is usually taken as standard in comparisons of building costs) the cost of hotel construction has very nearly doubled. That year, for example, witnessed the completion of the Savannah Hotel, Savannah, Ga., and the Hotel Dempsey at Macon, Ga. Both of these establishments are fireproof and modern in every particular. The former—a hotel of 200 rooms—cost \$400,000, and the latter, with 220 rooms, cost \$450,000. In both of these buildings the cost per cubic foot was from 28 to 30 cents. Today it would cost from 50 to 55 cents per cubic foot to build them.

#### *What Items Constitute Building Costs?*

There has also been a great deal of misunderstanding as to what items enter into hotel construction costs. When we speak of a hotel as costing so much, it should be understood that this cost means the completed structure ready for furnishings and equipment. The furnishings and equipment are in most cases supplied by the lessee and consist of the following items:

- Kitchen equipment
- Linens
- Silverware
- Carpets
- Draperies
- All movable furniture.

The building cost should cover the actual structure itself, exclusive of the property on which it stands—all painting, papering and decorating work, electric fixtures, vacuum cleaning system, mail chutes, bath accessories and mirrors, ice and refrigerating machinery and all refrigerators, time and watchman's clock systems; telephone and tautograph systems, screens and weather stripping. It is not as easy as it might seem to draw the exact dividing line between the items ordinarily furnished by the lessee and those included with the building, but inasmuch as this latter group costs from \$80,000 to \$100,000 for a typical 200 room hotel, it is readily apparent how important it is to have a definite understanding and written list of these items, both from the standpoint of correctly stating the new hotel's cost and also from that of entering into a clear understanding with the prospective lessee.

There are two more or less obvious dominating factors which govern the construction cost of any hotel. These are the status of the labor and material markets at the time the hotel is to be built. A contributing, but much less important, factor is the hotel's location with reference to the main lines of travel. If it

is to be built in a city which is off the beaten path, building material prices will in most cases be somewhat higher, due to the higher freight rates, and skilled labor will also cost more. Unskilled labor is frequently lower in out-of-the-way cities than it is nearer the main arteries of travel.

In outlying districts it is usually possible to substitute materials made by local manufacturers for the more commonly used materials, and in this way the costs can usually be kept down to approximately the same level as they would be in a hotel located more accessibly.

As an example of this point, I might state that in 10 hotels ranging from 200 to 300 rooms) I recently designed, in convenient and out-of-the-way locations, and extending over the east coast between New York and Florida, the cost did not vary over two cents per cubic foot.

#### *How the Type of Construction Affects Cost*

Practically all of the modern fireproof hotels of the type with which we are here concerned are of either reinforced concrete or steel construction. As a general rule the former type is from 3% to 5% lower than the latter on the total cost of the building. But this, of course, varies somewhat with the locality—that is to say, where steel is readily available, and where the elements entering into concrete are hard to secure, the steel building may cost less than under other conditions; whereas the saving might be as high as 10% in a location where steel is particularly difficult to get. This condition is very apparent along the Pacific Coast.

So much for the cost factors that enter into the promotion, planning and execution of the typical commercial hotel in the medium sized city. It is, of course, obvious that the foregoing statistics do not apply to "freak" cases with which readers may have come in contact, and I would also like to add that they are not necessarily applicable in very large or very small centers. An extended experience, covering the past 15 years and in practically every section of the country, has convinced me, however, that they will hold good in 9 out of 10 localities.

#### *Financing Through Public Subscription*

When it comes to determining a sound basis on which to finance the typical new hotel in the typical city, I am firmly convinced that by far the best plan is to raise at least 50% of the entire investment which includes the land, building, architect's fee and carrying charges)—and preferably from 60 to 65%—locally. This, of course, means the sale of an issue of common stock, and usually it also means a public campaign for the sale of this stock to as many of the local business men as it is possible to interest. It is practically impossible to borrow first

mortgage money unless at least half of the new hotel's cost has been first raised by public subscription. A hotel that has been largely financed by local citizens will enjoy a far greater amount of local patronage than will one that has been built without the townspeople's support. The reputable loaning companies realize this point and frequently insist on the raising of the first money in this way.

One serious danger to guard against in connection with the sale of stock to the town's citizens is that of the selfish interest of the influential man who agrees, for instance, to subscribe to a large block provided the hotel is erected where it will best serve his purposes rather than the city's. Several cases of this kind have come to my attention, and in every one of them the hotel has suffered in the end. Another danger is that of permitting the stock to get into the hands of interests who will later be in a position to dictate to the hotel management to its detriment.

#### *Two Ways to Sell Stock Locally*

The two principal methods of selling stock by public subscription are, first, that of employing a financial expert who specializes in conducting drives of this kind and, second, by handling the sale through the board of directors or a committee appointed by the board. Rather than generalize on the advantages and disadvantages of each of these plans, I will give below some specific and typical examples of each and attempt to point out their strong and weak points.

In 1916, several of the influential men in Greensboro, N. C., decided that the city (which then had a population of about 20,000) needed a new hotel. A directorate was formed, preliminary surveys made and a local stock-selling campaign undertaken. In this way \$100,000 worth of common stock was sold and this amount was increased through the sale of \$270,000 first mortgage 6% bonds to local insurance companies. It was then found that an additional \$140,000 would be required to erect the size and type of hotel the city needed, and this sum was raised through the sale of \$85,000 second mortgage 6% bonds and \$55,000 third mortgage 6% bonds to the city's inhabitants, all being sold without any expenses, fees or commissions. The O. Henry hotel was the result.

In this example, note that the board of directors were not obliged to pay any fees for the sale either of the common stock or any of the bond issues.

#### *The Case of Washington, Pa.*

Two years back, the people of Washington, Pa., (then of about 37,000 population) campaigned through the Chamber of Commerce and sold \$612,500 worth of common stock to 953 city residents.

Five of the local banks were then persuaded to underwrite a first mortgage bond issue of \$750,000. It was found, however, that an additional \$200,000 would be needed to complete the kind of hotel desired. So some of the local business men took it upon their shoulders to dispose of an additional \$200,000 worth of 7% preferred stock which they succeeded in raising.

For a while it was nip and tuck as to whether this hotel (the George Washington) would ever become a reality, and it was only through the strenuous efforts of these few public-spirited men that it was possible to go ahead with the structure. In my opinion, it is extremely dangerous to entrust the important and difficult work of raising funds particularly when they run to five figures—to one or even to several men. It is better to have a strong, well-organized committee of the board of directors, and one that is a representation of all the town's social and business groups, to carry out this work.

#### *How the George Vanderbilt Hotel Was Financed*

In 1922, the Citizen's Hotel Corporation of Asheville, N. C., was formed for the purpose of financing and building the George Vanderbilt Hotel. Asheville had a population of 45,000 at the time. In this case, the common stock (\$460,000) was all subscribed to by the directors and their friends, the campaign among the city's residents being confined to a quiet personal canvass. The real estate department of a bank and trust company that specializes in hotel loans assumed an additional \$400,000 worth of first mortgage bonds, all the funds necessary being raised in this way, except \$100,000 of 7% preferred stock which is to be issued upon completion of the building, and allotted pro rata to the common stockholders.

Here is a case where, because of Asheville's solidarity, it was found unnecessary to go to the time, trouble, and expense of raising funds through a strenuous campaign for public subscriptions. The need for the hotel was such that the city's residents have always believed in it, and it was easily possible to convince the mortgaging company that their investment would be well protected. Of course, a larger commission would have had to be paid the mortgaging company had not more than 50% of the funds been subscribed to by stockholders. The selling expense of raising, say, an additional \$100,000 on mortgage through an unwillingness to sell over 50% of the stock, would have made a great difference.

#### *Selling Stock With Outside Help*

I have selected the Johnson City Hotel, Johnson City, Tenn., as a good example

of a hotel successfully financed through the efforts of a professional fund raiser. The campaign was started in 1921, when the city had about 13,000 inhabitants. Within one week's time \$513,000 worth of stock had been pledged by 1,290 stockholders on notes bearing interest at 6%. These notes ran for from 3 to 4 years (10% being paid every four months) and the interest which the subscribers agreed to pay more than made up for the uncollectible subscriptions.

Where community spirit must be stimulated in order to make itself manifest it takes an outside expert to stir up the necessary interest in a new hotel. He is also in a better position than any of the residents to urge conflicting business interests to subscribe. It is, however, seldom necessary to let the payments extend over as long a period as 4 years. Usually from 12 to 15 months is sufficient.

The hotel's directors had realized about \$450,000 net cash at the end of 4 years, but \$250,000 of this amount was collected within a period of 2 years, and at that time an additional \$250,000 was borrowed from a loaning institution, the money being advanced through the local banks on the stockholders' notes as security.

Although in this particular case it was 2 years before the hotel could be started, the situation to be met was a particularly difficult one. As soon as the stock was pledged, however—and because there was such an unusually large number of stockholders—the hotel's board of directors were in a very strong position. In the first place, they had, through the work of the financial expert, succeeded in stirring up a wide and worthwhile interest in the undertaking; and in the second place, they were able to proceed without incurring a mortgage. There was no uncertainty as to whether or not the hotel could be completed because, with the stockholder's notes as collateral, they could always have floated a first mortgage bond issue had it become necessary to do so.

There are, of course, other methods of financing hotel properties. Frequently, for example, one wealthy resident in a city will carry the burden alone, and there are also a number of financial institutions that have become interested in hotels to the point where they will bear the brunt without demanding a preliminary stock selling campaign.

The weakness in both of these plans, however, is that the people of the city will not bring the same community spirit and support to the undertaking that they would if they themselves were financially interested in it, and a further weakness with the latter method is that in most cases the new hotel's proprietors are obliged to pay too high a premium for their money.

For the typical hotel in the typical

city, I would like to emphasize the point, already stated, that by far the safest, surest and most satisfactory financing method, in my opinion, is that of raising not less than 50% of the funds to cover the entire investment—and the first 50%—through selling stock to the people of the city.

The next installment in this series will discuss the architect's, engineer's and builder's relations to the new hotel enterprise.

### DAY LABOR IS HIT

Evidence of the ground being gained by advocates of the general contract system in their attack upon the practice of doing public work by day labor is found in a resolution unanimously passed by the Western Division of the Chamber of Commerce of the United States.

This resolution denounced expenditure of public funds in day labor construction and recommended the use of firm contracts with the lowest responsible bidder. Thus a large group of business men go on record as supporting sound business logic.

At the annual meeting of the directors of the Abram Cox Stove Company, held in the Company's Philadelphia Offices February 15th, Mr. Abram C. Mott, Sr., was re-elected chairman of the Board; Abram C. Mott, Jr., President; E. F. Glore, Treasurer; and Merle E. Mott, Secretary.

### THE GRASPING SHORT-SIGHTED CONTRACTOR

#### *A Modern Fable*

Once upon a time there was a near-sighted contractor, who was asked by an architect to figure a school house in a nearby village.

And he took the plans and he went over them carefully, and he gathered around him all the sub-bidders he could. And he examined all the figures of those sub-bidders and partook largely of their advice and counsel as to their particular part of the work.

And when all was said and done, he took those sub-bids which seemed best and put them on his estimating sheet and made his bid. And lo and behold, the next day he had a contract!

Then those sub-bidders who knew their figures were best, went to the near-sighted contractor to secure their share of his good fortune. But he refused, saying, "There was a man from Squashtown here who promises me a better price. Of course, I know he did not figure the job before it was let, but I took this work on a close margin and if I can save a dollar any place I must do so."

And the sub-bidders went away with wrath in their hearts, for they knew that

it was not only their price, but the information they had given, which had enabled the near-sighted contractor to land the job.

And, after many days, this same near-sighted contractor was very desirous of securing another job, and he besought the sub-bidders for bids, but they would have none of him, and he was sore distressed, and went away mournful, for in his heart he knew he had need of their knowledge and figures if he was to land the job.

And great was his sorrow when he learned that the contract had been awarded to a contractor who played square with his sub-bidders.

Moral: Even a sub-bidder gets tired of being a free information bureau and will bite the hand that fails to feed him, after a while.—*The Associated Contractor*.

### NEW BOOKS

"The Appraiser's and Adjuster's Hand Book," by William Arthur, author of "Estimating Building Costs," "Home Builder's Guide" and "Building Estimator's Hand Book," has just been issued by the U. P. C. Book Company, 239 W. 39th St., New York.

"The Appraiser's and Adjuster's Hand Book" contains many short cuts of invaluable assistance to engineers, architects, appraisers, adjusters, accountants, lawyers, realtors, assessors, builders, building and loan associations, insurance companies, investment companies, trust companies, banks, manufacturing establishments.

The price is \$1.50 and the book is well worth the cost to contractors, builders and building trades in general.

"Modern Plumbing Illustrated," 4th revised and enlarged edition, by R. M. Starbuck, author of "Questions and Answers on the Practice and Theory of Sanitary Plumbing," "Standard Practical Plumbing," etc., published by the Norman W. Henley Publishing Co., 2 W. 45th St., New York, is fully illustrated by seventy detailed engravings, which have been made specially for this book. It is an up-to-date and thoroughly practical book on modern plumbing practice, illustrating and describing the drainage and ventilation of dwellings, apartments and public buildings, etc. The standard work for plumbers, architects, builders, property owners and for boards of health and plumbing engineers.

"House Painting, Glazing, Paper Hanging and Whitewashing," Third Edition, Revised and Enlarged, by Alvah Horton Sabin, M. S., D. Sc., Consulting Chemist, Member American Chemical Society, has just been published by John Wiley & Sons, Inc., 440 Fourth Ave., New York.

A readable and extremely useful book, containing what the amateur painter really needs, and not confusing him with a lot of technical stuff which would be intelligible only to the experienced journeyman painter.

"House Painting" was written by an expert of one of the largest manufacturers and gives in an elementary way the most recent knowledge that the amateur and householder need to know. The author enters quite fully into the details of painting and varnishing and the proper materials to use to accomplish the best results.

The Appendix includes formulas for an ample number of colored paints, the tinting

materials being one or two, and never more than three, in a formula.

The book will save many times its cost, \$1.50, to the man who is building a new house or repainting and decorating an old one.

"Departmental and Standard Costs," by William S. Kemp, Treasurer, Holtzer-Cabot Electric Co., and Vice-President of the National Association of Cost Accountants, has been published by The National Association of Cost Accountants, 130 W. 42nd St., New York.

Here is a book which deals with facts. It is a simple explanation of the actual operation of a practical cost system of the most modern type by a man who has been closely associated with its installation and its operation over a term of years.

There is no theory in this book. It tells you in simple language how it is done, not how it ought to be done. On almost every page you will find ideas and suggestions which you can immediately put to work in your business. It is not a big book—about a hundred pages, eight by ten and a half inches—but every page contains real information on cost control that can be applied to any type of industry. There are thirty-six charts and forms with the actual entries illustrating the entire system from the erection of the plant to the completion of the finished product.

The National Association of Cost Accountants is offering this book to non-members of the Association at a price of four dollars per volume. It is now ready for distribution.

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—Elbert Hubbard.

The other day a prominent local architect called up to inquire regarding a concern that has not advertised with us for two years. "I saw their ad. some years ago in the Guide," said the architect, "and am unable to recall just where they are located." We gave him the address and learned subsequently that as a result the firm bagged a big order. How many similar orders, from architects who wouldn't take the trouble to look them up, that same concern has missed in the course of the past two years it would interest us to know.

You can't expect to do your "bit" of this busy world's business unless you enlist in the advertising ranks.

## ARMSTRONG'S CORK TILE FLOORING

PROVIDES COMFORT, QUIETNESS  
DISTINCTIVE APPEARANCE

This member of the Armstrong family of floor coverings is a true cork product, being clean cork shavings, compressed into moulds and baked.

It possesses ten distinctive features:

Resilient and comfortable

Quiet underfoot

Non-slippery

Warm to the touch

Attractive appearance

Sanitary

Remarkably durable in service

Easy to clean

Economical

Slow-burning and fire-retarding

We are direct factory distributors for Armstrong Cork Products—flooring and insulation. Write or phone us for complete details regarding your requirements.

## As The Editor Sees It

### BUILD YE BETTER

BY ERNEST MC CULLOUGH

A few weeks ago the newspapers featured a report made by a professor in a school of architecture, saying that conditions today are not favorable for the development of good architecture. According to him workmen on buildings today are merely assemblers. In ancient and mediaeval times all buildings in process of erection were the center of a throng of busy workmen planning, designing and fashioning their contributions to the structure and later putting them in place. Today all the creative work is done in offices far from the building site and the various parts are made in factories from whence they are shipped for crews of erecting workmen to place them.

The principal complaint of this professor seemed to be that in these degenerate days the item of cost is permitted to assume too great importance.

It is fitting to look into the facts mentioned by the professor and examine into the question as to how great a factor cost has been in building. To begin it is right and proper to state that today things are being done in a far better way than they were done at any period in the past and architecture is advancing at a pace that surpasses anything dreamed of in the times when existing architectural gems were erected.

The writer feels that he must take

issue with the professor and in the present series of articles will show how architecture has developed through improvements in methods for cutting down cost.

The architect is the "Master Workman." Such is the accepted definition of the Greek word from which Architect is derived. The architect originally was a superintendent of construction and probably had something to do with the preparation of the plans of the building he supervised.

The older architects on ordinary buildings were boss masons if masonry was used, boss carpenters if the buildings were of wood, or boss plasterers if the buildings were wood frame covered with stucco. Architects of this type are with us today. They are to be found in every small town and in many larger towns.

Twenty-five years ago the writer lived in a far western city in which there was a first class carpenter who gradually worked into a general contracting business. The people there thought so highly of him that they never employed an architect to prepare plans for buildings Harry was to erect. The writer one day overheard the following conversation between a leading citizen and Harry that went about as follows:

"Say, Harry, come on over to that corner of mine. I want to get some idea of what you will put me a building up for on it."

"No use going over there, Gus. I've been passing that lot for fifteen years and know as much about it as I need to. If you want a figure on the job, shoot."

"Well, it's this way, Harry. I want to put a five-story brick building on that lot. It wants to be good looking. I think we can get three or four decent sized stores on the ground floor, some offices on the 2nd floor and fix the three top floors for a rooming house. Think that will go all right?"

"Sure it will go. Depends on how much money you want to spend."

"Think you can do it for \$25,000?"

"Sure. That will put you up a dog gone nice shebang."

"All right, Harry. I just sold some sheep and I put twenty-five thousand dollars in the bank yesterday. I won't spend a single cent more. You go ahead and put me up that house and if it costs more than twenty-five thousand dollars the extra cost will be on you."

"All right, Gus. Just so the thing will be reg'lar I will get Judge Henry to fix up some sort of contract and specifications and I will fix up some drawings at home tonight. Think you can sign it tomorrow?"

"Surest thing you know, old scout," and then we were all invited to say what ours was, and we said it. The new building was duly christened and the reporter for the local paper had an item at last, for

**BLUE  
PRINTS**

the town had been dull for a long time.

Harry had the writer put the drawings in good shape and the building went up with nothing more than these small sixteenth inch scale drawings made in a hurry for the contract and specifications. The specifications were in the form of a letter and covered one sheet.

The job was done while Gus was away for the summer with his sheep, and it cost just thirty dollars less than the twenty-five thousand Harry had a right to spend, so Gus made Mrs. Harry a present of a thirty dollar plush coat "just to make it come out even, you know."

A couple of years ago a gentleman in New York had some plans prepared for a home he wished to build in a suburb. The plans were prepared in first-class style and bids were called for. The lowest bid was twenty-five per cent. higher than he felt he could afford to pay. Then his wife saw a picture of a house that looked good enough for her in a woman's journal with floor plans alongside it.

Being a woman and knowing nothing about how these things should be done she went to a local builder who was putting up a house in the suburb and asked him if he could give her an idea of how much it would cost. He told her he would give her a bid if she liked; and she liked. The bid was satisfactory and her husband was pleased, for the arrangement of the rooms was almost identical with the arrangement in the plans he had paid for. He asked the contractor if he wished him to have large scale drawings prepared, and the contractor said he did not as he could give them a house to suit them from the clipping from the journal.

Luckily the contractor was a decent, honest man and the building went up in a way that suited the owner exactly. The contractor got a good idea of what the client wanted, was able to put himself in his place and planned and executed the building satisfactorily.

Harry and the second contractor are good examples of the original *architek-ton* master—or chief—builders. Both Gus and the New Yorker might easily have fallen into the hands of men who would not have given them such satisfactory service, but as it happened, they were lucky.

The method is not to be recommended, for it was too irregular for these days and works only when both parties are honest and the contractor gets a good price for his work and makes a profit. Two better examples, however, would be hard to find to illustrate just what original *architekton* did.

The architect, until within quite recent times, was a man put in charge of the construction of important buildings. If a fortress was to be built the architect

was a military man, a man who was well schooled in the arts of war, especially the operations of a siege from the point of view of offense and defense.

The word engineer comes from the Latin word meaning "an ingenious man," and the original engineers, were the military engineers, so the architects, that is to say the chief of the workmen, on fortresses were military engineers. They worked from sketchy plans and the details developed as the building went up.

Architects of temples in ancient times and of cathedrals in mediaeval times, were men trained in the church, members of the priesthood. In fact we have reason to believe that during the Middle Ages there was a religious guild of church builders.

Architects of the palace of kings and great men were as often as not painters or sculptors, or even poets or musicians. They were favorites of the men who employed them and were placed in charge of these great works in order to give an excuse for paying them a pension from the public treasury.

In such cases the title of architect was not always well deserved, being much like modern politicians who are placed at the head of great works for which their previous training has not fitted them, and who turn it over to trained men while they themselves work to keep their hold on the job.

We may imagine quite easily that many of the great architects of the past had their reputation made by their humble, and unknown to fame, assistants. As it was in the beginning, is now and ever shall be, world without end, the fame of many men is due to the effective work of their press agents and biographers.

Until within quite recent times all plans of buildings were sketchy at the time the buildings were started. The plans were altered from time to time and the building when it was completed was exactly like the client and his architect imagined it would be the day the corner stone was laid.

There was a good reason for this and this reason exists today, namely, the will of the client. Clients in the olden days, the days when the wonderful cathedrals and castles were built, were autocratic. Like all autocratic people they were childlike in their insistence upon having their own way. Hardly more so perhaps than many modern clients but there was a difference between the buildings of yesterday and today that is not always grasped. The big buildings of today must produce a cash dividend on the investment.

Most of the buildings of olden times were built to reduce trouble with the unemployed to a minimum. We erect

**Bank**, Pennington, N. J. Architect, J. O. Hunt, Hunt Building, Trenton, N. J. Owners, Pennington National Bank, R. W. Woolsey, cashier, Pennington, N. J. Brick, frame, 1 story, 32x65 feet, slate roof, hardwood and tile floors, vapor heat, electric light, metal lath, tile, marble and terrazzo work, rolled steel skylights, bank fixtures, metal window guards, terra cotta, ornamental iron work. Plans in progress.

**Studio and Apartment (alts. and add.)**, 216 East Hanover street, Trenton. Architect, J. O. Hunt, Hunt Building, Trenton, N. J. Owner, Jerome H. Fritz, 148 East State street, Trenton, N. J. Brick, steel, 3 stories, 22x70 feet, slag roof, hardwood floors, vapor heat, electric light, tile and marble work, metal lath, rolled steel sash and skylights, ornamental iron work. Plans in progress.

**Sunday School**, Palmyra, N. J. Architect, A. Moses, Temple Building, Camden, N. J. Owners, First Lutheran Church, Palmyra, N. J. Stone, steel, 1 story and basement, 45x70 feet, slate roof, maple floors. All bids rejected. Will take revised bids.

**Residence**, Haddon Heights, N. J. Architect, Thomas Stephen, Temple Building, Camden, N. J. Owner, Samuel Davis, Audubon, N. J. Frame, 3 stories, 45x36 feet, shingle roof, hardwood floors, hot water heat, electric light, tile work. Owner taking sub-bids.

**School**, Delanco, N. J. Owners, Board of Education, W. L. Holt, Delanco, N. J. Plans completed. Owner ready for bids in 10 days.

**Residence**, River Road, Trenton, N. J. Architect, J. O. Hunt, Hunt Building, Trenton, N. J. Owner, F. B. Traver, care of architect. Frame, 2½ stories, 55x35 feet, slate roof, hardwood floors, hot water heat, electric light, tile and marble work. Plans in progress. Architect will be ready for bids in ten days.

**Garage**, Chestnut above Second street, Camden, N. J. Architect, Jacob Naschold, 5224 North Second street, Philadelphia. Owner, William F. McCormick, on premises. Brick, 1 story, 40x100 feet, steam heat, electric light, slate roof, cement floors. Owner taking bids due as soon as possible.

**Dyke and Sluice**, Delaware River, Kellecohook Meadows, N. J., opposite Delaware City,

Del. Architect, United States Engineer, 1307 Schaff Building, Philadelphia. Owners, United States Government, Washington, D. C. Construction, pile, timber and stone dyke and sluice. Owners taking bids due March 20th. Further information upon application.

**Hotel (add.)**, Atlantic City, N. J. Architect, Walter Smedley, Stephen Girard Building, Philadelphia. Owners, Hotel Dennis, Atlantic City, N. J. Brick, cut stone, limestone, steel, 9 stories and basement, 57x185 feet, 5 stories and basement, 53x143 feet, slag, tile, slate roof, cement, oak and maple floors, elevators, metal weather strips, shoring, waterproofing, imitation Travertine work, bond, hollow metal doors and sash, rolled steel skylights, tile and marble work, metal lath, steam heat, electric lighting. Architect taking bids due March 13th at noon.

**Residence**, Scudders Falls, N. J. Architect, J. O. Hunt, Hunt Building, Trenton, N. J. Owner, Lewis H. Lawton, 428 Hamilton avenue, Trenton, N. J. Hollow tile and stucco, 2½ stories, 42x90 feet, Spanish tile roof, hardwood floors, hollow tile, vapor heat, electric light, metal lath, tile, marble and terrazzo work, leaded glass, cut stone, ornamental iron work. Plans in progress. Architect will take bids in ten days.

**Residences (12)**, Trenton, N. J. Architect, R. A. Schumann, 202 West State street, Trenton, N. J. Owner, Jacob Lis, 18 Laurel avenue, Trenton, N. J. Stone and frame, 2½ stories, 14x44 feet, slate roof, hardwood floors, steam heat, electric light, tile work. Architect taking sub-bids.

**Office Building**, Trenton, N. J. Architect, J. O. Hunt, Hunt Building, Trenton, N. J. Owners, United Clay Mines, American Mechanics' Building, Trenton, N. J. Brick and frame, 2 stories, 30x50 feet, slag roof, hardwood floors, hot water heat, electric light, roof ventilators, metal ceilings. Architect taking bids due March 7th.

**School (add.)**, Roebling, N. J. Architects, P. L. Fowler Co., Fitzcharles Building, Trenton, N. J. Owners, School Board of Florence Township, E. Robbins, Florence, N. J. Low bidder: General Cont. & Const. Co., Trenton, N. J., \$74,000. Heating, William G. Royer, 510 Stuyvesant street, Trenton, \$15,525. Plumbing, William G. Royer, 510 Stuyvesant street, Trenton, \$3,925. Electric, Jackson Electric Co., Forst Rich Building, Trenton, \$1,500.

## New Jersey Contracts Awarded

**Bank**, Millville, N. J. Architect, Thomas E. Ash, 1012 Walnut street, Philadelphia. Owners, Mechanic National Bank, Dr. A. R. Slade, chairman, Millville, N. J. Brick, cut stone, steel, 2 stories and basement, 82x40 feet, slag roof (plumbing, heating, electric light, vault doors reserved), cement floors, bronze work, roof ventilators, metal ceilings, shoring, ornamental iron work, bond, doors kalamein, copper skylights, hollow metal sash, marble work, metal lath, cabinet work. Contract awarded Turnbull & Cornell, 15 South Twenty-first street, Philadelphia.

## Delaware Construction News

**Store Front (alts.)**, Ninth and King streets, Wilmington, Del. Architect, J. D. Thompson, Jr., Ford Building, Wilmington, Del. Owners, Miller Brothers, Ninth and King streets, Wilmington, Del. Plate glass, copper work, 60 feet long, tile and marble work. Plans in progress. Architect will take bids in ten days.

**Residence**, Holly Oak, Delaware. Architect, E. C. May, Dupont Building, Wilmington, Del. Owner, name withheld. Brick, 1½ stories, 28x36 feet, asbestos shingle roof, hardwood floors and composition floors, hot water heat, electric light. Architect taking sub-bids.

## Miscellaneous Construction News

**Theatre**, Hagerstown, Md. Architects, Hoffman-Henon Co., Finance Building, Philadelphia. Owner, G. W. Bennethum, 1307 Vine street, Philadelphia. Brick, 2 stories. Plans in progress.

**Residence**, Hagerstown, Md. Architect, H. E. Yessler, Rupp Building, York, Pa. Owner, H. Evans, Hagerstown, Md. Brick, stucco, 1½ stories, 32x28 feet, shingle roof, hardwood floors, vapor heat, electric light, tile work. Plans in progress.

## Proposals

Sealed Proposals will be received by the School District of the City of Easton, Pa., at the office of the Secretary, 30 North Second Street, until Monday, March 24th, 1924, 8 P. M., for the construction of a Senior High School Building at Northampton, Twelfth and Spring Garden Streets, City of Easton, Pa., in accordance with plans and specifications prepared by Messrs. Michler and Shnyder, Easton, Pa., and on file at their office, 610 Drake Building.

Separate bids will be received for the following:

- (A) General Contract.
- (B) Heating and Ventilating.
- (C) Plumbing.
- (D) Electrical.

Plans and specifications for the above can be obtained at the office of William M. Michler, 610 Drake Building, Easton, Pa. A deposit of fifty dollars (\$50) will be required for the use of plans, specifications, and etc. Plans and specifications to be returned in good condition with bid when deposit will be refunded. All bids to be accompanied by a certified check payable to the order of the Easton School District for an amount equal to 2% of the amount of the bid submitted. Certified checks to be returned to all excepting the two lowest bidders immediately after the award of the contract. Checks of the lowest bidders to be retained until contract is signed and satisfactory bond furnished.

Proposals to be made on form provided by the architects for that purpose and addressed to the Easton School District, Attention R. E. Peifer, Secretary, 2nd and Church Streets, Easton, Pa. All bids to be sealed and marked on outside.

### "PROPOSALS FOR CONSTRUCTION OF SENIOR HIGH SCHOOL."

The Easton School District reserves the right to reject any or all bids or part of any bid submitted.

Easton School District,  
F. T. Clark, President.

Attest:  
R. E. Peifer, Secretary.

## NOTICE

Sealed Proposals will be received by the Pennsauken Township Board of Education at 8 o'clock P. M., March 19th, 1924, for the General Construction, Heating, Plumbing and Electric Work for new Junior High and Grade School to be built by the Pennsauken Township Board of Education on Merchantville Avenue, south of Cramer Street, Penn-

sauken Township. Drawings and specifications can be seen at the office of Arnold H. Moses, Architect, Temple Building, Camden, N. J., on and after Saturday, March 1st, 1924.

ARNOLD H. MOSES,  
Architect.

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., February 27, 1924. Sealed Proposals will be opened in this office at 3 P. M., March 19, 1924, for new roof on large dwelling and alterations to farm buildings to make garage space at the U. S. Veterans' Bureau Hospital, Castle Point (Chelsea), New York. Drawings and specifications may be obtained from the superintendent of construction at Chelsea, or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

**Want to hear from owner having farm for sale; give particulars and lowest price.** John J. Black, Chippewa Falls, Wisconsin.

(Continued from Page 148)

buildings in three hundred days that surpass many that took three hundred years to erect in the good (?) old days. The builders in olden times had a surplus of labor while we are troubled with a scarcity nearly all the time.

The modern architect is a product of the last two centuries. He is really a product of the last fifty years when reproductive processes, especially the invention of blue printing, cut down the cost of preliminary study.

The period in which home architecture shines out in American history was the Georgian Period, when so far as we are able to ascertain, many of the outstanding examples of dignified homes were produced by "carpenter-architects."

Such examples of drawings as have come down to us are crude and, according to modern standards, incomplete, but they were understood by the men of the day and were all that was needed. Probably many of the old "carpenter-builders" were like Harry who built a house for Gus within a fixed limit of cost.

Except for castles, fortresses, temples, cathedrals, palaces and royal parks and gardens which were paid for from the public treasury, cost has been a most important item in building operations. We read in St. Luke XIV, 28, the following: "For which of you, intending to build a tower, sitteth not down first, and counteth the cost, whether he have enough to finish it." Next to cost comes utility and then comes beauty. These factors will not be examined.

Discussion of the word "architect" is readily disposed of by admitting that the architect is "chief of the builders," or, the "chief builder," the master builder. There are as many varieties of architect and as many types of men fit to be so styled as there are varieties of work to be executed by builders. This work covers not alone buildings but the planning and construction of public parks and

private estates and the laying out of cities. Men who became noted as landscape architects in the past were courtiers endowed with a sense of the artistic, or were artists possessed of the arts and graces of courtiers. Landscape architects today are men trained for the work.

The architect who today has to do with the construction of buildings is also one who has been trained for the work. The training is different, however, from that given in the ancient and mediaeval days, from which present-day architects draw so much of their inspiration.

It is hardly necessary to state here the manner in which the modern architect is trained, for it is well known to all who come in contact with architects and their work. It is sufficient to say that the modern architect is the builder who specializes in planning, the carpenter being a builder who specializes in woodwork, as the brickmason is the builder who specializes in the brick work, the stone mason the builder who specializes in stone masonry, etc.

After all, these builders are all members of the oldest fraternity in the world, neither one being superior to the other for none can work without the support of the other and the builder who bears the title of architect is the chief among them merely because he is the co-ordinator builder. He does know enough about the work of each to enable him to prepare plain directions, known as specifications, for the guidance of all in order that the completed structure will be harmonious in plan, convenient for the use of those who have it constructed, economical in cost and pleasing to the eye. In short the architect is the builder who knows how to build pleasingly.

In what respect does the work of the engineer differ from that of the architect? In Sturgis' "Dictionary of Architecture and Building" we find under the head "Engineering" after a long descriptive paragraph, the following:

"In a general way the division between the architect's and the engineer's work may be expressed in this way: whatever is traditional in form and in structure, whatever is admittedly safe, whatever is known to all practical builders as well as within the limits of danger, comes within the architect's province; and nearly all his most important artistical results are procured from the treatment of such buildings as this. All that is so new or so complex as to require careful scientific examination based upon mathematics is the province of the engineer. Some, but not many, modern architects are themselves competent and, up to a certain point may trust their own computations. Some, but not many, engineers have something of that traditional respect for beauty and significance of form that they may

make their own designs for the decorative effect of structures which they have to carry out. The great majority of either profession are men who are greatly in need of the aid of those of the other profession —."

The average builder in small and medium size communities is an architect of a sort, for he frequently plans the structures he erects. Many times he does not plan but he assists prospective customers in the selection of plans from books they buy from builder's magazines and offices of architects who specialize in furnishing plans without supervision. The plans selected often do not meet in all particulars with the approval of the purchasers and the local builder makes the desired alteration. He is the chief builder and therefore is an architect.

Whether he would be successful as an architect in a city like New York is the concern of nobody until he attempts to practice in the larger place. For his own home folks, however, he is competent in that he supplies a service they require, oftentimes without realizing how valuable such service actually is to a community. When the local builder is a reader and student of his business the community is to be congratulated.

Notice that Sturgis spoke of "whatever is traditional in form and in structure," whatever is admittedly safe, whatever is known to all practical builders as well within the limits of danger," being within the architect's province. This brings us at once to the question of how the art of building developed through the ages. It came about by a study of the failures encountered by innovators and the successes achieved after a study of the mistakes that led to failure.

Every country had a style that was created by the proper use of the materials most readily available and the peculiarities of the labor that fabricate the materials and the structures into which they entered. The builder developed through a constant counting of the cost and the adaptation of means to ends.

The architect as we know him today, developed only in those countries where there was a fairly decent standard of living among the masses of the people and it was felt that some money legitimately could be expended upon the decoration of surfaces, the enrichment of structural members and an arrangement of the lines to attract the eye because of the pleasure it gave to gaze upon the work.

(Continued Next Week)

Men are walking by and around people that want to buy from them, and do not know it.

## As The Editor Sees It

### BUILD YE BETTER

BY ERNEST MC CULLOUGH

(Continued from Last Week)

The structures of ancient Egypt were massive because the earlier buildings of a poor people not well supplied with stone working tools, were principally of sun dried brick. The walls, so much wider at the bottom than at the top, were based upon properly distributing the load. It had no doubt been found early in the life of the primitive people that high walls had a tendency to crush under their own weight. By making the bottom very wide and reducing the thickness with height utility and economy were secured.

This form of structure became so identified with the country that tradition caused it to be continued even after stone supplanted adobe for large temples and palaces. The country was hot and thick walls conserved coolness by serving as insulating material, so the interiors of the more important buildings that have been preserved to us appear to be gloomy. In their time they may have been lighter than we imagine, for in the recently discovered tomb of Tut-ankh-Amen were found candles and lamps, both of which were supposed to have been invented at a much later date than that when he reigned.

The structures of the early Greeks were light in character because the climate of Greece was salubrious and the

hills were well wooded. They built of wood and then, when they learned how to use stone working tools, of marble. This marble was strong and there was plenty of it. Proportions of columns, beams and girders in time became fixed and a traditional method of building was adopted by the Greeks, a style being developed which remains today the standard of taste and beauty for architects and other lovers of form in building.

The Romans were not so fortunate as the Greeks in the possession of strong marble, so in whatever they copied of Greek architecture there was something lacking. Being world conquerors they copied from other countries and became adept in the use of brick and stone in small units. They were a people who admired strength and ruggedness, so their buildings exhibited larger expanses of wall surface than those of the Greeks and mural decoration developed. The Romans may be said to have introduced the painting of walls instead of following the Egyptians and other ancient peoples in the decoration of large wall surfaces by carving.

The Romans succeeded where the Egyptians had failed that is, in spanning large openings between walls, making free and bold use of arches. The Egyptians apparently were afraid to attempt to span wide openings because of the poor materials they had for the making of arches. The Greeks were happier

in the possession of strong marble and building stone. The Romans admired the grandeur of the Egyptian buildings and the appearance of lightness of those of the Greeks, the result being large buildings with thick walls supporting arches. Further lightness was obtained by series of cross arches, the groined arch being a common feature.

### Beginning of the Gothic

After the Roman style of architecture had become fixed the Romans conquered Gaul and proceeded to erect in that country buildings of approved Roman type. The Gauls, however, did not possess vast forests from which could be obtained at a proper cost the wood required to make centers for the immense arches, nor was the country densely enough populated to furnish the labor required to build the immense walls to support the arches. The Gauls were also temperamentally more like the Greeks and had no love for large buildings merely because they were large. They liked light and air and admired beauty. The first development, apparently, in Gothic architecture was the recessed doorway. Light centers of wood were erected to sustain a thin ring of stone to form an arch. This ring was then used as a center to carry another thin ring of greater width. The two then served as a center to carry a third thin ring that projected beyond the second. In some of the doorways it was

**DRAWING  
MATERIALS**

**CHARLES H. ROBBINS CO.**  
1729-31 Sansom Street Philadelphia  
BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 3519

**BLUE  
PRINTS**

not uncommon to have eight or ten rings, or layers, of stone. The projecting edges were carved and the resulting doorways were beautiful. Window openings were made in the same fashion and the broken arch supplanted the circular arch becoming a feature of Gothic architecture that stamps it with an individuality.

#### *Gothic Arches*

The grand Gothic arches were obtained by the intersection of two aisles. The diagonal arches forming the intersection were made circular in shape, thus naturally causing the arches in the intersecting aisles to be broken. Piers carrying the thrust of the arches were found to permit of large openings in the walls without weakening the latter. These piers carried to great heights became slender columns and the interiors of cathedrals so resembled alleys between high trees in forests that many artists ascribe the beginning of Gothic architecture to an attempt on the part of the early builders to imitate in their temples the groves in which their ancestors worshipped. Throughout Gaul there was found a stone that was easily quarried and which hardened in the air. This stone was not hard to carve, in fact much of it when wet with quarry water being as easy to work as modeling clay, so Gothic buildings were enriched with carvings. Carving, then, became a definite feature in Gothic architecture. The idea of imitating the tree embowered worshipping places of the ancient Druids is too significant to be disregarded and one need not fear of being far wrong in believing that when men mastered the design of Gothic arches with slender supporting columns they dreamed of imitating the beauty of wooded aisles in forests.

#### *Form in Architecture*

Form in architecture, however, has been more largely influenced by cost than by striving after beautiful effects. The true architect is he who knows how to use to best advantage the forms that through tradition have come to be accepted as being at once beautiful and economical.

The Egyptian learned through centuries of building just how thick to make his walls for all heights. The Greek learned how to proportion their slender columns so they did not give a sense of weakness, yet did convey to the beholder a feeling of beauty and just proportion. The Romans knew nicely how to balance cost and appearance and the men who developed the Gothic style of architecture knew nicely how to balance safety and cost; matchless beauty resulting when these two greatly to be desired ends were obtained.

#### *Development of Style*

The development of architecture has

been said to result from man setting up in the wilderness temples to his ideals. Rather has it been due to the fact that in the construction of buildings to satisfy his necessities man has succeeded in achieving at the lowest possible cost to the principles established by the Creator of the Universe so that unconsciously he has joined economy, strength and beauty. He has applied in the development of the science of building the great principle of the conservation of energy and in so doing has discovered the underlying laws of harmony and beauty.—*Building Age*.

Manufacturers of tanks, and manufacturers of equipment in which tanks are used, have been invited to meet in a series of conferences under the auspices of the Division of Simplified Practice, Department of Commerce, Washington, on March 11, 12, 13, and 14, looking to the elimination of seldom-used sizes and varieties of tanks. More than 150 manufacturing representatives from 24 states have been invited, as well as delegates from the National Board of Fire Underwriters, American Institute of Architects, American Society of Sanitary Engineering and other technical groups and from fire departments of a number of leading cities. Distributors and consumers will be present.

The conferences will deal with hot water storage tanks, cold water storage tanks, pneumatic tanks, gasoline underground storage tanks, distillate and fuel oil storage tanks, and air receivers.

The meeting will be a sequel to conferences held during January. At that time manufacturers of hot water storage tanks agreed on tentative recommendations reducing their products to five sizes and two working pressures. Manufacturers of pneumatic tanks, at that time also, were in favor of a reduction of their products to nine sizes and one working pressure. These developments resulted in a request to the Division of Simplified Practice for assistance in bringing about simplification of cold water storage tanks, gasoline storage tanks, fuel oil and distillate tanks, storage tanks for oil heating systems, and air receivers.

Through the co-operation of the Division, ten other companies have applied simplification measures estimated to be saving millions of dollars annually, through the reduction of cost of production, of inventories, through increased sales at lower expense. Distributors and consumers benefit, it has been found, from improved service on the part of manufacturers. Some of the industries which are now using simplified practice include paving bricks, face brick, asphalt, hollow building tile, bed blankets, range boilers, files and rasps, forged tools, woven wire fence, and metal lath.

"PAID FOR ITSELF ON ONE JOB"

That's what we're being told over and over again about the

"STERLING" Convertible Level

What it has done for others it will do for you. DON'T WAIT until a costly mistake in lines or levels eats up more than enough of your profits to pay for it, but insure accuracy and safeguard profits by adding a "Sterling" Level to your equipment right now, TODAY. Changed in TEN SECONDS for Transit Work; no detachable parts to misplace or lose. Illustrated Folder G-14 upon request. Free examination, easy payments. An all-Philadelphia product. Call or phone direct to the Factory.

Indemnity Insurance Company of North America  
write practically every form of Insurance except life.

## For Lowering the Freezing Point of Concrete—

And making it Permanently Hard and Waterproof

THE addition of "ANTI-HYDRO," a liquid integral compound to the gauging water, lowers the freezing point of concrete from 15 to 18 degrees, allowing you to work right on through the cold weather.

"ANTI-HYDRO" also makes concrete *permanently* hard and waterproof, all in one operation. Easy to use—simply mix it with the gauging water.

For 19 years "ANTI-HYDRO" has proved to be the best by test.

## As The Editor Sees It

### A NEW HOTEL IN YOUR TOWN

#### VI. The Architect's and Builder's Relation to the Enterprise

A full description of the services the Architect, engineer and builder should render to the new hotel.

BY W. L. STODDART,  
Architect

Reprinted Through the Courtesy of  
"Hotel Management"

Let us suppose that the new hotel project has passed through the preliminary stages as described in the foregoing articles in this series. These stages consist of the organization of the board of directors or business men's committee who initiated the project, the preliminary negotiations with the prospective lessee, the selection of the site, determination of the hotel's size, preparation of a report with a view to outlining the type of hotel that will best meet the city's needs, the determination of its approximate cost and the fund raising campaign.

The next step in launching the new hotel is that of selecting its architect. In nine cases out of ten, the business men who start a project of this kind are not trained to read an architect's plans or specifications, which means that they must largely depend on his honesty and ability, and that they are obliged to place absolute trust, both in him and in his organization. For these reasons, it is obviously of first importance to select a man whose training and experience is such that there

is no question as to his fitness for designing a hotel that is artistic, structurally correct with proper mechanical equipment, and one that will prove efficient in its planning for economical and satisfactory operation.

Of course, the views of the prospective lessee should be consulted when it comes to choosing the architect, but it is, in my opinion, a mistake for the owners to insist on the architect's complying with all of the lessee's ideas, for the directors must remember that the original lessee may have unusual—and perhaps—too elaborate—opinions as to how the hotel should be built, and that the ideas of another lessee may be entirely different. It is, therefore, better to erect the hotel along sound, conservative lines so that when the first operator's lease expires, it will not be difficult to find a man to take his place should they or he wish to sever relations. It is therefore doubly important that the architect should have had wide experience in the planning and building of hotels so that he can, without reservation, properly advise the owners regarding important rearrangements of the plans under consideration.

#### What Architectural Service Should Include

The standard fee that the Institute of Architects calls for is not less than 6% of the total cost of the building, plus traveling expenses incurred in supervising its erection. The owners are also ex-

pected to furnish the architect with a survey of the property. In return the architect should give complete architectural and engineering services. These as a rule, include the following items:

Preliminary sketches and a statement showing the cubical contents and approximate cost per cubic foot.

These sketches include an exterior elevation of the building and plans as follows:

Section                      Basement floor  
Lobby floor  
Typical bedroom floors.

After the owners and prospective lessee have had an opportunity to go over these sketches, and after whatever modifications have been decided on are approved by them, the working drawings and specifications are prepared by the architect. This portion of the architect's service includes all the architectural drawings and specifications, covering as a rule, the following items:

All architectural plans and specifications  
Structural drawings and specifications  
Mechanical drawings and specifications including  
Plans of the plumbing layout  
Plans of the heating and ventilating layout  
Plans of the electrical layout.

#### Selecting the General Contractor

As soon as all the working drawings

**DRAWING  
MATERIALS**

Philadelphia  
KEYSTONE PHONE, RACE 3519

**BLUE  
PRINTS**

and specifications have been approved by the owners and lessee, copies are sent to a selected list of responsible contractors for their estimates. The selection of contractors to bid on the work is generally left to the judgment of the architect, due to his experience and knowledge of their ability and financial standing.

In sending out working drawings and specifications to the general contractors, it is always a good plan to ask for alternate bids which will give the owners an opportunity to reduce the cost if it found necessary to do so and if this can be done without in any way impairing its quality.

When all the contractors bids are in, another conference takes place between the owners, lessee and architect, all of whom should be given an opportunity to express their opinions as to the basis on which the contract should be awarded.

Prior to this point in the procedure it will have become necessary to decide as to whether the general contractor will also be held responsible for the mechanical equipment. As a general rule I believe it better to ask for separate bids on the mechanical work and to select the mechanical contractors separately from the general contractor. Then, in my opinion, all of the work should be included under one general contract.

Obviously, the form of contract entered into with the builder is of vital importance. There are many different methods for determining the builder's compensation—they are too many and complicated to enumerate here. The architect's opinion on this point is, or at least should be, of considerably more value than that of the other groups, for if he is the type of business man he should be, he will be just as familiar with this phase of the work as with its creative aspects.

Once the general contractor has been selected, his first step is that of letting the sub-contracts for the various divisions of the work. The architect should be asked to pass on the ability, experience and financial standing of each of these sub-contractors.

There is but one standard and recognized method for payments to the general contractor. This is through the monthly issuance by the architect of certificates of payment to the builder covering 85% to 90% of the value of the work completed during the course of the preceding month. The final payment on the retained percentage is made after the completion of the contract as approved by the architect.

As soon as these negotiations have been concluded, the architect prepares the full sized detailed drawings which go to the general contractor who in turn issues them to the sub-contractors who then prepare shop drawings for the manufactures of the work covered by their con-

tracts. The architect approves these latter drawings before the work is executed. This procedure applies to all the finished and manufactured parts that are to be incorporated in the new hotel, with the exception of its mechanical equipment, and further excepting the structural steel and reinforced concrete work, for which the successful sub-contractors prepare the detailed shop drawings. These latter drawings should be approved by the structural engineer in the architect's office before the work is executed.

When properly executed by the architect's engineering staff, the detailed mechanical drawings are so complete that no shop drawings are required with the exception of those for such specialties as boilers, pumps, plumbing fixtures, valves, and the like, which are submitted for approval by the manufacturers who are to supply them, and which should also be approved by the architect as coming up to the requirements of the specifications before this equipment is ordered.

#### *Starting Work on the New Hotel*

The above procedure covers in a general way the preparatory steps which must be taken before actual work on the build can start. The next step is for the architect and general contractor to each install his superintendent on the work. These two superintendents are the representatives of their firms and are in direct charge—the first, of the architect's part in the building and the second, of the general contractor's. It is the former superintendent's duty to see to it that the general contractor and the mechanical contractors, comply with all the architect's plans and specifications, while the general contractor's superintendent watches the work of his own men and that of the sub-contractors. If the architect's office is at a distance his superintendent sends daily or semi-weekly reports on the progress of the work.

Where a procedure of this kind is rigidly followed and where no undue delays such as labor troubles freight congestion or the like are encountered, the building should progress smoothly to its successful completion.

It is only through strict adherence to a carefully organized working plan such as this that the hotel can be properly built. Furthermore, it goes without saying that each of the men who enter into it must be thoroughly competent, practical and experienced. A hotel presents more difficult construction problems than any other type of building. In it are combined many of the features that characterize private homes, factories, stores, office buildings, banks and public institutions. And it is specialized knowledge of hotel operating as well as hotel construction problems that the owners and lessee should insist on when negotiating with architects, builders and engineers.

## Proposals

### ADVERTISEMENT FOR BIDS TO CONSTRUCT

#### A. Sanitary Sewerage System and Sewage Disposal Plant for the Borough of Elizabethtown, Penna.

Sealed Proposals endorsed "Proposals for Constructing a Sanitary Sewerage System and Sewage Disposal Plant at Elizabethtown, Pa.," addressed and delivered to D. L. Landis, Secretary of Borough Council, Elizabethtown, Pa., will be received until Tuesday, April 15, 1924, at 7.00 o'clock P. M., at which time the bids will be publicly opened at a meeting of Borough Council at their usual meeting place in said Borough. In general the work to be done involves a Disposal Plant, four trunk sewer lines approximately 21,900 feet long, a collecting system of laterals in Borough Streets approximately 51,000 feet long, incidental manholes, flush tanks, appliances, etc. Largest size pipe used is 15-inch. Plans and Specifications and other information can be secured upon application to F. H. Shaw, C. E., 53 North Duke Street, Lancaster, Pa., or Fuller & McClintock, 1001 Chestnut Street, Philadelphia, Pa. The Borough reserves the right to reject any and all bids. Bids may be for the whole, or any one

of six parts of the whole, as per specifications.

By authority of Borough Ordinances approved March 4th and 11th, 1924.

D. L. LANDIS,  
Secretary Borough Council.

Schmitt & Slater Co., Mason Builders, formerly of 1132 Vine Street, have moved to new offices at 2315 Walnut Street, Philadelphia.

Plans are going forward at Washington D. C., to make the spring of 1924 a period of definite progress in improving the quality of American homes. Women's clubs, civic organizations and other agencies are marshaling under the leadership of Better Homes in America, an educational, non-commercial corporation recently formed with Herbert Hoover as president and Dr. James Ford, now on leave of absence from Harvard University, as executive director. The aim of the organization is to help the man of small income learn how to live in more comfort, more health and more certainty that his children will regard the home as the center of interest.

The week of May 11th-May 18th has been designated as Better Homes' Week. Local committees are being organized on a nation-wide scale to prepare community exhibits of homes properly planned, built and furnished. No commercial features of any kind will attend the exhibits and Better Homes in America will confine its efforts solely to service for the individual homeowner and the community at large.

Offices have been opened at 1653 Pennsylvania Avenue. The directors of the new organization include Miss Grace Abbott, Mrs. William Brown Meloney, who is vice-president, Don Barber, Christian A. Hertor, John M. Gries, Mrs. John Sherman, George W. Wilder and Edwin H. Brown.

"One definite objective," Dr. Ford said in outlining the purposes of the movement, "will be the inclusion in high school curricula of required courses in home-making and the care of a home. The one sure product of every school is an army of men and women who will head homes, yet for this most important function in life there is often not even a pretense of practical training."

A host of simple but collectively important ways to improve small homes are being recommended by the group behind the new organization, who aided informally in the setting up of approximately 1000 Better Homes exhibits in 1923.

Here are some of the prosaic bits of advice:

Put the kitchen sink under a window so that the home-maker may enjoy the fresh air and the beauty of nature while engaged at necessary household tasks.

Put rollers on the kitchen table and

save about fifteen miles of walking a month for the housewife.

Place your bed in relation to the bedroom windows so that you can have plenty of fresh air without a draft.

Dedicate the sunny south bed-room to your children instead of to occasional guests.

Build your house so that the living-room and dining room constitute one big room. Then your daughter can have dances, parties and other social events at home instead of somewhere else.

Give the housewife the share of the living expense money which should come under her jurisdiction, and let her be responsible for the budgeting of it.

There are scores of further recommendations. Books, music and other cultural features of the home are included in the specifications, as well as things physical. A determined effort will be made to see that every American knows what constitutes the best, most livable home his money can assure.

### ALERTNESS PICKS UP ORDERS

Looking for business and just waiting for business makes the difference between success and a bare living.

The DAILY BUILDING NEWS will tell you where to look and make you most alert in securing business.

BUILDING NEWS PUBLISHING CO.  
1530 Chestnut St. Philadelphia.

### WE ASK YOU

Isn't it funny?  
THAT A MAN WHO CONSIDERS HIMSELF A BUSINESS MAN  
Will get up in the morning  
From an advertised mattress,  
And put on advertised underwear,  
Advertised hose, shirt, collar, tie and shoes.  
Seat himself at a table and  
Eat advertised breakfast food,  
Drink advertised coffee or substitute,  
Put on an advertised hat,  
Light an advertised cigar,  
Go to his place of business and  
TURN DOWN ADVERTISING ON THE GROUND THAT ADVERTISING DOESN'T PAY!

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—Elbert Hubbard.

## As The Editor Sees It

One of the major aims of the Better Homes in America movement is the promotion of thrift for home ownership. It is being stressed again this year in the national campaign of the organization which culminates in Better Homes Week, May 11 to 18.

But, while the ownership of its home by a family enables the family to control its own living conditions, to secure comfort, safety and privacy, make the home attractive according to the family's standards of taste, and promote a wholesome family life uninvaded by the threats or negligence of the landlord, the greatest care should be exercised by the prospective home buyer or builder. The attention of the officials of Better Homes in America has been called to cases in which owners have reported that their houses were poorly constructed or that they lost money because a factory was built nearby, or that promised street or public utility improvements were not put through.

Dr. James Ford, Executive Director of Better Homes in America, calling attention to the number of homes which are a needless burden to those who had them built due to necessary expenditures unforeseen in planning, urges that the home buying or building venture be of assured safety before a start is made.

"For many men home ownership is not a present possibility," Dr. Ford said. "Their positions may be temporary and

they must be free to move if necessary. But building should not be undertaken by any family until they have accumulated enough to secure a sufficient equity to make the venture safe. A step which so vitally affects the whole future life of the family should of course be taken with careful planning and reasonable caution. It does not mean in most cases to start building now, but rather to start saving today to provide a safe margin on the purchase price and to provide for appropriate new furnishings where needed.

"Cases where home builders and buyers have suffered from the failure to have street or other improvements made, or through deterioration of the neighborhood emphasize the need for taking reasonable precautions in buying a home," Dr. Ford continued. "The booklet on the subject published by the Department of Commerce, known as 'How to Own Your Home,' written by Dr. John M. Gries and James S. Taylor, highly competent authorities on the subject, points out many common symptoms of poor construction to be looked for in buying a completed house. These symptoms include cracks in foundation walls or rooms, uneven or squeaking floors, casings warped or pulled away from the plastering, doors that do not swing easily, and lack of sheathing or building paper on the house. This pamphlet, obtainable from the Superintendent of Documents at the

Government Printing Office in Washington for five cents, points out that it is safest to secure the advice of a competent builder or architect who will give prospective purchasers the benefit of expert advice for a small consideration.

"The writers of 'How to Own Your Home' state also that it is always safest to buy in a residential district in a zoned city on account of the protection from intrusion by factories, public garages and stores. Where streets, curbing, sidewalks, water, electric, gas or sewerage improvements have not been made, the home buyer has no business to take chances on 'probabilities' or 'expectations' in regard to them."

The great majority of those with whom home-seekers deal are honest, according to Dr. Ford, but it is always well to have such expert advice as can be given by disinterested persons of wide experience. The honest builder welcomes the chance to have his work compared with that of the fly-by-night by an architect or someone else who knows, he pointed out.

"In other words," said Dr. Ford, "Better Houses in America recommends home ownership as a program of great social importance, but because of that very importance urges prospective home owners to weigh and consider all the factors involved instead of rushing headlong and indiscriminately into home building. Careful planning and wise and patient thrift are the first steps."

## Proposals

### PUBLIC NOTICE

Bids for the heating and ventilating system to be installed in the Junior High and Grade School Building about to be erected for the Pennsauken Township Board of Education will be received and opened at the Collins Tract School Building on Monday, March 31st, at 8 o'clock P. M.

Information regarding the requirements and copies of drawings and specifications can be had by application to the office of the Architect, Arnold H. Moses, Temple Building, Camden, N. J.

### SEALED PROPOSALS

Sealed proposals are invited for cleaning down and repointing of entire granite exterior of Camden County Court House, Camden, N. J., in accordance with specifications prepared by Rankin, Kellogg & Crane, 1012 Walnut Street, Philadelphia, Pa.

Bids will be received on Monday, April 7th, 1924, at 11 A. M., Standard Time, and publicly opened and read by the Court House Committee in the meeting room of the Board of Chosen Freeholders, Camden, N. J.

Copies of the specifications for this work can be seen at the office of Rankin, Kellogg & Crane, 1012 Walnut Street, Philadelphia, Pa., and at the office of the Clerk of the Board of Freeholders, Court House, Camden, N. J. Copies of the specifications will be delivered to contractors who certify that it is their intention to submit proposals by applying to Rankin, Kellogg & Crane.

Bids to be in sealed envelopes and addressed to Walter T. Gross, Chairman of the Court House Committee, and endorsed, "Proposal for cleaning and repointing Court House."

The right is reserved to accept or reject any or all proposals or to waive any informality in the proposal presented.

WALTER T. GROSS,

Chairman of Court House Committee.

Dated 3/22/24.

Nelson Pedley Const. Company, Inc., Builders, formerly of 1615 Spruce Street, Philadelphia, have opened new offices in the Corn Exchange Bank Building, 1510 Chestnut Street, Philadelphia. Telephone numbers, Bell Spruce 4839, Keystone Race 7008.

MacKenzie & Wiley, Architects, formerly of Liberty Building, Philadelphia, have moved to a new suite of offices at 517 Bankers' Trust Building, Juniper and Walnut Streets, Philadelphia, where they will continue the practice of architecture.

It is surely an injustice to your workmen as well as a source of loss to yourself to supply poor tools in your shop equipment. No man can do anything approaching good work with tools that take the edge off enthusiasm. In shop management, as in most things, details are the whole cloth. Tools are like men. They do good work or they do not, according to the character which they possess. Character in tools is a matter of good materials, expert making and correct design.

## For Lowering the Freezing Point of Concrete—

**And making it Permanently Hard and Waterproof**

**T**HE addition of "ANTI-HYDRO," a liquid integral compound to the gauging water, lowers the freezing point of concrete from 15 to 18 degrees, allowing you to work right on through the cold weather.

"ANTI-HYDRO" also makes concrete *permanently* hard and waterproof, all in one operation. Easy to use - simply mix it with the gauging water.

For 19 years "ANTI-HYDRO" has proved to be the best by test.

(Continued from page 211)

States and exceeding by 50% the total exports of this country. Activity in Construction bears a close relation to general business conditions."

S. W. Straus in a recent White House conference, said, "There is potential need for eight billion dollars worth of new buildings in the United States today. The nation's volume of buildings for 1924 will reach five billions, and all of this is just so much new capital created to contribute its share of Federal, State and City taxes."

Secretary of Labor Davis recently stated as follows: "More than eleven millions of our people are dependent for their living upon the construction industry and 22% of all the skilled and unskilled labor of the country is engaged in the building branch alone. Some 250,000 freight cars are required to handle the materials. Our building bill is \$200 per year for each family in the United States." Mr. Davis concluded, "it is truly the chief barometer of the business of the country. When Construction gains, prosperity is with us. It is the great outstanding influence for good or bad in our financial progress."

Another author has recently referred to Construction as the "big tool of mankind," and says "it has always been the best means of expressing the impulses underlying civilization."

Evidently Construction contributes heavily to the tremendous buying power of our people and the savings banks of the country reflect to a remarkable degree the activity of this field. Construction is truly the key industry which unlocks the rest.

The cold facts are impressive. About 30% of the nation's wealth is produced by Construction and it absorbs 60% of our national savings. Some 3,000 other industries are dependent upon it. Over 90% of the iron, copper, lead and zinc we produce is consumed in Construction. It is simple truth to say that Construction precedes and underlies all human development. "Everywhere the spirit of the Builder hovers over the earth." Everywhere he is ceaselessly shaping the amazing structure through which human life functions and finds opportunity and happiness—building the highway over which it is traveling to its ultimate destiny.

Now two fundamental questions next present themselves. First: Has the evolution of this tremendous activity which touches so vitally every human life, developed an adequate specialized ability, either executive or technical? Second, is that ability essential to its orderly progress?

(Continued next week)

## LINOTILE FLOORS

### Have Character

Unusually effective designs are obtained with Armstrong's Linotile Flooring. As its name indicates Linotile is tile made and laid in separate units, and not being supplied in sheets or in set patterns is capable of wide expression in design.

But aside from the effective designs, Linotile is

Resilient  
Non-slippery  
Silent underfoot  
Warm  
Sanitary

Easy to clean  
Odorless

### ECONOMIC ASPECTS OF DAY LABOR CONSTRUCTION

*Address delivered by Arthur S. Bent,  
Partner, Bent Brothers, Los Angeles,  
Cal., at Fifth annual meeting of the  
Associated General Contractors of  
America, January 21, 1924, Chicago.*

(Continued from Last Week)

If I could show you at this very moment in one amazing panorama, merely the physical problems which are being solved right now by the master constructors of the world, what an impressive answer it would be to our first question. What stupendous difficulties are being met, what marvelous works are being wrought. Great subways burrowed beneath the rivers and railways and buildings of New York. Factories whose deep foundations are crowding back the Mississippi river with its tidal sweep of over 30 feet. Concrete chimneys 300 feet high, 20 feet in diameter, built entirely upon the roof of a power house. Huge dams thrown across mountain gorges in the high Sierras while torrential streams flow uninterrupted. Railways hung like spider threads along sheer cliffs and spanning mighty rivers. Docks and seawalls that make good the challenge "thus far and no farther." Subaqueous conduits that lie on the ocean's bed, and towers that pierce the sky. Aqueducts traversing deserts and ranges and

lakes. Highways through swamps and under mountains. Buildings that tower in safety and beauty 50 stories above the city's streets. All of this and much more our flash light would show, and upon the throttle of this mighty engine of modern civilization rests the competent hand of the general contractor.

Let us look him over a bit before we consider whether he is really needed. He is the product of evolution plus personal ability and character. Slowly step by step he has climbed a hard road. He has had many downfalls but he has learned much and paid with his own money for every lesson. Through much experience he has accumulated knowledge which can come in no other way, and he has acquired precedent to guide him through all new difficulties. He knows what tools will best work out his plans and how to use them. He has developed a keen judgment of men and their fitness, and through his acquired ability to guide and inspire them he has built up a specialized and dynamic organization. Along with his skill he has developed integrity and responsibility so that he absorbs within himself the consequences of such mistakes as he may make and even such misfortunes as befall his work, and he is constantly spurred to his maximum efficiency by the necessities of his own financial responsibility. He delivers the goods, the kind he promised at the price he

agreed. He has rightly been called "civilization's big tool."

Now who do the advocates of day labor work ask us to take in his stead for handling the 5,000 million dollars we will put into construction this year? Why, a politician, placed in office by a campaign in which his ability as a construction manager was not even remotely considered. He holds that office for a limited time until a new but similar official may take his place. He has no organization, no plant, no experience and frequently so little executive ability that the business world has passed him by, and public office is the best job he can get.

This official so poorly equipped that he would never undertake the work with his own capital, if he had any, says to the city or to the state, "let me have this ten million bond issue and I'll build the highway or the sea wall or the aqueduct or the city hall, and save you all the contractor's profit! True I have no financial responsibility but I want to try it anyway. I have had no experience. I never undertook an important project of any kind and I admit that probably no contractor would want me as his manager for the job. But there's no reason why I can't hire the same men that he hires and get as good foremen and superintendents as his, and buy the material just as cheap. That's all there is to it. Then too the inspection expense will be nominal because nobody will

PRINTS**

cheat, and the engineering will cost much less because we don't have to get our plans ready in advance, we can start and then work them out as we go along. It is true I only *think* I can do all this, and if I miss my guess you will have to foot the bill. I can't give you any guarantee. Of course I don't propose to put up a bond. I couldn't get one if I wanted to, but—let's go!"

Now does anyone really question the proper choice between these methods from the standpoint of economics, which we are discussing? Can any of us doubt the pernicious effect upon the morale of our people of this phase of socialism. And is anyone really ignorant of the inevitable answer which history has already given?

It is a commonplace to say that we all recognize the propriety and necessity of a certain amount of day labor work. Many emergencies can best be met by this method. Most maintenance work should be so carried on. And there are rare cases where the conditions indicate it for major operations. But in spite of such notable instances of successful construction as the Miami Conservancy District and the Los Angeles Aqueduct, the prosecution of public work by day labor has been a long story of waste of public money and the development of inefficiency. This is such common knowledge that I shall take your time with only a few examples, and moreover shall confine myself to my own observations.

The State of California had a most significant experience in building highways by day labor, which is fairly illustrated by an excerpt from the report of the United States Bureau of Public Roads published in 1920. This shows from a study of twenty California highways, ten of which were done by contract and ten by the State's forces, that the contracted jobs exceeded that engineer's estimates by 39% while the day labor jobs exceeded the engineer's estimates by 193%.

In the joint report of the two great California Automobile Clubs may be found the statement that of 300 highway jobs done by day labor, and amounting to seven millions of dollars, the State's accounts showed unit costs on only five jobs. On two of these five the State first called for bids and rejected them on recommendation of the State Engineer who then undertook the work himself. The record shows the following figures:

Excavating—Engineer's Estimate, .55; Contractor's Bid, 1.10; Actual Cost to State, 1.17 per cu. ft.

Concrete—Engineer's Estimate, 4.50; Contractor's Bid, 7.50; Actual Cost to State, 10.38 per cu. yd.

In totals this means on the first job a bid of \$117,000 and an actual cost of \$160,000 or a loss to the State of over 37%, and on the second job a bid of \$43,-

000 and a cost of \$81,000, or a loss to the State of almost 90%.

With such facts within their knowledge what shall we think were the reasons that led State officials to continue this method to the extent of \$7,000,000 worth of highways; and were their reasons typical? It is gratifying to add that the present California administration went into office under a pledge to stop this reckless waste and to carry on its public construction under public competition and firm contracts protected by surety bonds.

The Gila Dam in Arizona was estimated to cost \$800,000. It was built by day labor, without change of plan at a cost of nearly \$2,000,000.

A County Engineer of Northern California made the statement to me that during his administration practically all of the highways built by day labor ran 20% above the bids received for the same work and moreover that inspection was poor and labor inefficient. Also that in the few cases where cost keeping was attempted at all, nothing was allowed for equipment or its depreciation.

I could fill my allotted time with illustrations, big and little, of the waste of public funds on day labor construction, but every man here could do the same thing. The taxpayer everywhere comments on this waste and has his sarcastic joke about it. The story is written too plainly to be misunderstood. But let me add a word or two from experts who are disinterested.

California State Highway Engineer Morton says: "We have no conviction that day labor work generally offers a means of saving money. We know that it increases the overhead expense and by scattering the energies of the administrative officials detracts from the quality and quantity of supervision given to contracts."

Wm. Mulholland, widely known as the great engineer who built the Los Angeles Aqueduct by day labor, recently wrote, "In the case of ordinary large works where plans can be definitely prepared, it *would be folly* to discard the customary method of employing the contractor. It is my firm belief that the proper method from a business standpoint is to accept the firm offer of the responsible and experienced contractor, thus definitely determining the public's liability and putting the responsibility where it belongs, upon a concern which makes construction its specialized business."

Capt. Herbert Nunn, former State Highway Engineer of Oregon, after handling seventy millions of highway construction in six years, recently said, "I have found it impossible to do day labor work at a saving to the taxpayer."

I make it a rule never to write a grouchy letter—I telephone.

CONTEMPLATED CONSTRUCTION: ARCHITECTS AND OWNERS: COST LIMIT: LAST DAYS FOR FILING BIDS:

CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Residences (27)**, Sixty-seventh avenue, Bouvier, Smedley and Seventeenth streets, \$195,000. Architect, private plans. Owners, W. Fisher & Sons, 209 Oak Lane Trust Building, Philadelphia. Brick, 2 stories, 19x36 feet, 17x48 feet, hardwood and pine floors, hot water heat, electric light. Owners will build.

**Residences (6)**, 626-36 North Fifty-second street, Philadelphia. Architect, William F. B. Koelle, Otis Building, Philadelphia. Owner, name withheld. General alterations (heating reserved). Architect taking bids due April 10th.

**Store and Apartment (alts. and add.)**, 1229 Spruce street, Philadelphia. Architect, William F. B. Koelle, Otis Building, Philadelphia. Owner, name withheld. Brick, 3 stories, 19x90 feet, hardwood floors, plumbing, plate glass, flush bulks, tile and marble work, electric light. Plans in progress.

**Recreation Pavilion and Auditorium**, Forty-eighth and Westminster streets, Philadelphia. Architect, Peter F. Getz, 1634 North Sixteenth street, Philadelphia. Owners, St. John's Orphanage, on premises. Brick, cut stone, concrete and stone, 1 story and basement, slate roof, maple floors, metal ceilings, shoring, dampproofing, ornamental iron work, bond, rolling steel sash, tile and marble work, metal lath, steam heat, electric light, plumbing, painting and glazing. Architect taking bids due April 10th.

**Store and Apartments**, Fifty-fourth street, North of Columbia avenue. **Residences**, Columbia avenue, East of Fifty-fourth street, and Ruby street, Philadelphia. Architect, private plans. Owner, Louis Green, Fifteenth and Chestnut streets, Philadelphia. Brick, 2 stories, hot water heat, electric light, metal lath, tile and marble work, slate and slag roof, hardwood floors, cement work, plate glass, metal bulks. Garages in the basements. Owner will build.

**Stores, Apartment and Residences**, Germantown and Meehan street, Philadelphia. Architect, William F. B. Koelle, Otis Building, Philadelphia. Owner, name withheld. Brick, 3 stories. Plans in progress.

**Moving Picture Theatre, Stores (8) and Apartment**, Fifty-sixth and Lansdowne. Architect, Solman Kaplan, 10 South Eighteenth street, Philadelphia. Owner, name withheld. Sketches being drawn.

**Garage**, West of Memphis, South of Cambria street, Philadelphia. Architect, J. Frank Clark, 23 South Sixteenth street, Philadelphia. Owner, name withheld. Face brick, steel, concrete, 1 story, 140x120 feet, gypsum and slag roof, cement floors, steam heat, electric light, rolled steel sash, hollow metal skylights. Plans in progress. Ready for bids in 2 weeks.

**Stores (2)**, Southwest Corner Tulpehocken and Belfield avenue, Philadelphia. Architect, J. Frank Clark, 23 South Sixteenth street, Philadelphia. Owner, name withheld. Brick, 1 story, 30x30 feet, slag roof, pine floors,

plate glass, electric light, flush bulks. Plans in progress.

**Garage**, Sixty-ninth and Market streets, Philadelphia. Architects, R. R. Neely and E. William Martin, 2301 Spruce street, Philadelphia. Owner, name withheld. Brick, 1 story, 200xirregular, slag roof, cement floors, steam heat, electric light, rolled steel sash, hollow metal skylight, rolling steel doors, plumbing. Plans in progress.

**Richmond Station**, Delaware River, foot of Wheatsheaf Lane, below Pennsylvania R. R. Bridge. Architect, J. T. Windrim, Commonwealth Building, Philadelphia. Owners, Philadelphia Electric Co., Tenth and Chestnut streets, Philadelphia. Brick, steel, concrete. Capacity (12) 50,000 K. W. Turbo Generators. Plans in progress.

**Building (alts.)**, Sixth and Marshall, North of Dauphin street, Philadelphia. Architect, William Lowenthal, 1208 Chestnut street, Philadelphia. Owners, Joseph Gutman and Joseph Stern, Philadelphia. Brick, converting into manufacturing building, 2 stories, 26x184 feet, garage, 2 stories, 38x58 feet, 1 story, 52x126 feet, slag roof, concrete and pine floors, electric elevators, roof ventilators, wire glass, metal bulks, hollow metal skylights, plumbing, electric light, steam heat. Plans in progress.

**Garage**, Sixty-second and Spruce streets, Philadelphia. Architect, J. S. Fuller, 5438 Locust street, Philadelphia. Owner, name withheld. Brick, 1 story, 60x100 feet, slag roof, concrete and cement floors, steam heat, electric light, rolling steel sash, hollow metal skylight. Plans in progress.

**Two-Family Apartments (2), Residences (7)**, Sixty-seventh avenue, between Seventeenth and Bouvier streets, Philadelphia. Architect, Karl F. Otto, 1828 Arch street, Philadelphia. Owner, George Ungerer, Seventeenth and Sixty-eighth avenue, Philadelphia. Brick, 2 stories, 22x50 feet, 18x40 feet, slag, tin and tile roof, hardwood floors, cement work, metal lath, tile work, hot water heat, electric light, garages in basement. Owner ready for sub-bids.

**Store and Dwelling**, Forty-sixth and Wyalusing streets, Philadelphia. Architect, William Lowenthal, 1208 Chestnut street, Philadelphia. Owner, David L. Sloan, 2061 North

Sixty-second street, Philadelphia. Brick, 3 stories and basement, 20x30 feet, 9x12 feet, slag roof, wood floors, hot water heat, tile work, electric light. Owner taking sub-bids.

**Residence (alts. and add.)**, 4856 Parkside avenue, Philadelphia. Architect, Solomon Kaplan, 10 South Eighteenth street, Philadelphia. Owner, A. E. Jawer, 604 North Broad street, Philadelphia. Hollow tile, stucco, 2 stories and basement, 27x19 feet, bond, cement work, hollow tile, cut stone, structural steel and iron work, plastering, slate roof, tile work, carpentry and mill work, composition floors, steel sash, painting and glazing, oak floors, heating alts., electric, plumbing. Architect taking sub-bids.

**Residence**, Ossining, N. Y. Architect, Joseph F. Lowery, Land Title Building, Philadelphia. Owner, J. Olsen, care of architect. Stone, 2½ stories, 50x30 feet, Spanish tile roof, hardwood floors, electric light. Plans in progress.

## DEPARTMENT OF COMMERCE, WASHINGTON

As a result of surveys made in 1922 of sizes and types of metal laths by the Associated Metal Lath Manufacturers, and a conference under the auspices of the Division of Simplified Practice, Department of Commerce at which manufacturers, architects, builders and builders' supply representatives and labor union officials were present, an official publication is about to be issued by the Government Printer covering the simplification of this product. More than 80 per cent. of all groups concerned have adopted the simplification recommended reducing from 125 varieties to 24 flat expanded, ¾ inch expanded and flat rib expanded metal lath, and have been putting the reductions into force for some time.

The recommendations officially adopted were as follows:

### SECTION. I. Flat Expanded Metal Lath.

Weights in lbs. per sq. yard of		Gauges of sheet (U. S. Standard)		
Painted Steel	Special Metals	Sheets galv.	Minimum	Maximum
2.2	2.2		28	26
2.5	2.5	2.5	28	26
3.0	3.0		28	24
3.4	3.4	3.4	26	24

### SEC. II. ¾ inch Rib Expanded Metal Lath.

Weights in lbs. per sq. yard of		Gauges of sheet (U. S. Standard)		
Painted Steel	Special Metals		Minimum	Maximum
2.5			28	26
3.0	3.0		28	26
3.5	3.5		27	24
4.0			26	24

### SEC. III. Flat Rib Expanded Metal Lath.

Weights in lbs. per sq. yard of		Gauges of sheet (U. S. Standard)		
Painted Steel	Special Metals		Minimum	Maximum
2.75	2.75		30	28
3.20	3.20		30	28
3.75	3.75		29	24
4.00	4.00		28	24

SEC. IV. Sheet Lath—Painted steel lath is to weigh not less than 4.5 pounds per square yard, with corresponding minimum weights in this type of lath made from special metals or from sheets galvanized before fabrication.

SEC. V. Expanded and Sheets—Metal lath in all types and weights galvanized after fabrication is to be eliminated.

SEC. VI. The industry is to make every effort to direct practice to a consolidation of the pairs of bracketed sizes, Sections I and II in a single weight to replace each pair; this is to be made effective if possible at the 1924 conference.

SEC. VII. All types of lath are to be specified and sold by weight per square yard.

SEC. VIII. Manufacturers accepting this recommendation and who so desire, may stamp or tag their product "Made in accordance with U. S. Department of Commerce and Simplified Practice Recommendation No. 3."

The action of the makers and users of metal laths forms one of an important group connected with the construction industry who have adopted simplification since Secretary of Commerce Hoover organized the movement for a reduction of excess variety as a measure of increased efficiency, lower costs, more stability of labor, and better service. Among the other groups were makers of rough face brick, smooth face brick, hollow building tile, prepared roofing, range boilers and a number of household articles. Savings of millions of dollars have been effected by simplifications, and more than a hundred other industries are planning similar action.

### WE ASK YOU

Isn't it funny?  
THAT A MAN WHO CONSIDERS  
HIMSELF A BUSINESS MAN  
Will get up in the morning  
From an advertised mattress,  
And put on advertised underwear,  
Advertised hose, shirt, collar, tie and shoes.  
Seat himself at a table and  
Eat advertised breakfast food,  
Drink advertised coffee or substitute,  
Put on an advertised hat,  
Light an advertised cigar,  
Go to his place of business and  
TURN DOWN ADVERTISING ON THE  
GROUND THAT ADVERTISING DOESN'T  
PAY!

write practically every form of Insurance except life.*

## **For Permanently Hard and Waterproof Concrete**

**T**HE addition of "ANTI-HYDRO," a liquid integral compound, to the gauging water produces extremely hard and absolutely waterproof concrete all in **one operation.**

For waterproofing concrete cellars, walls, foundations, pits, stucco, mortar, etc., "ANTI-HYDRO" has no equal. It is easy and economical to use—simply mix it with the gauging water.

For 20 years "ANTI-HYDRO" has given complete satisfaction on every type of concrete hardening and waterproofing work.

## NOVELTY CARBURETOR BOILER

*Made small enough for the home—large enough for churches, schools, theatres, office buildings, warehouses and factories.*

### *The Heating Plant with the Carburetor*

In the self-adjusting carburetor chamber of the Novelty Carburetor Boiler, all smoke, gases and carbon, ordinarily wasted, are mixed with oxygen from the air and burned. The Novelty Carburetor Boiler is the only really smokeless boiler.

**Three Main Points** have determined the selection of the Novelty Carburetor Boiler, for buildings of all types, in all parts of the country.

1. It requires less boiler room space.
2. It burns any kind of fuel, including oil—without smoke.
3. It is durable—will last as long as the building without repair.

## As The Editor Sees It

### A NEW HOTEL IN YOUR TOWN

#### VII. The Contract with the Lessee

The last in this interesting series of articles on the successful planning and completion of the new hotel. The author is indebted to Mr. J. R. Newell of Pease and Elliman for collaboration on some of the technicalities mentioned in the text.

BY W. L. STODDART  
*Architect*

Reprinted through the courtesy of  
"Hotel Management"

The last, but by no means, least important consideration in the planning, construction and completion of the new hotel project is that of arriving at an understanding with the lessee or manager which will prove satisfactory both to him and to the owners. Nor does the making of this arrangement come last in the steps that are aimed to bring the new hotel to the point where it can open its doors to the public.

As has already been stated in this series of articles, the lessee should be consulted when it comes to selecting the new hotel's site, determining its size and character, raising funds for its construction, estimating its costs and in the carrying on of the negotiations with the architect and contractors—all of which means that at least the preliminary negotiations regarding the manager's lease should be going on while these other phases are being developed. It is only when the owners take

the lessee fully into their confidence right from the start that he can bring the necessary amount of enthusiasm and knowledge to his part of the work.

As a preliminary to what follows, I wish to again make the point that this discussion is confined to what might be called a typical American hotel—that is, the 100 to 300 room establishment that is primarily commercial in character, located in a city of from 20,000 to 50,000 inhabitants. Naturally, this discussion will also be limited to the lease that is made when a new hotel is to be opened—the letting or sub-letting of an old hotel is an entirely different story.

For hotels of this character, there are three chief methods of procedure, all of which, however, are in the last analysis based on the same fundamental and all-important principal—namely, that the capital invested in the enterprise is entitled to a fair return. In other words, any and every lease on a new hotel of the kind we are here considering should be based on its total cost at the time of completion. "Total cost" is sometimes a misleading term, and in order to make it perfectly clear as to the items that go to make up this figure, I am listing them below:

Cost of the real estate  
Construction cost of the building  
Cost of the mechanical equipment, including:  
Electrical fixtures

Vacuum cleaning system  
Mail chute.

Bath accessories and mirrors  
Ice and refrigerating machinery and refrigerators

Time and watchman's clock systems  
Telephone and telautograph systems  
Screens and weather stripping  
Papering and decorating

Architect's fees

Cost of financing

All overhead expenses incurred during construction.

#### The Basis of Lease "A"

The first of the three plans on which the lease is generally negotiated is simply for the lessee to guarantee to the owners a fixed annual sum which in his and their judgment constitutes a fair return on the entire investment arrived at by totaling the above items. In most cases this return on the investment is fixed at from 6% to 7% and when the lease extends over a period of 20 years or more, it is frequently considered a good plan to base it on a graduating scale which takes into consideration the fact that the hotel's earning capacity will be somewhat lower at the start but that it will increase as time goes on. (In this connection, note the accompanying financial table.)

This kind of lease is usually entered into when all the indications point to the fact that the new hotel is a public necessity and that it will enjoy a good earning capacity from the start. In other words, it

is most desirable in cities where competition from other hotels is not a serious factor and where a better-than-average volume of business from travelers, local inhabitants, store and sub-rentals may be anticipated.

With the above form of lease it is customary for the lessee to furnish the hotel as a guarantee to the owners that he will fulfill his obligations. Many misunderstandings have arisen as to just what items should be included in the furniture supplied by the lessee. As a general rule these are as follows:

Kitchen and lunch room equipments complete (except refrigerators)

Linens, bedding and the like

Silverware, glassware, chinaware, and kitchen ware

Carpets and rugs

Draperies and all decorations other than plastered walls

All movable furniture and other accessories

#### *Lease "B"*

The second general form of agreement between the owners of a new hotel property and the lessee has developed as a result of those cases where none of the interested groups could fairly estimate or agree as to the probable volume of present patronage and future growth that the hotel would fall heir to. In such a case, it is frequently more desirable and conservative from all viewpoints to agree on an approximate 5% guarantee to the owners (and based on the total cost as arrived at above), with provision for a maximum rental return up to 7%, after which the net returns over and above the 7% is divided equally between the lessee and the stockholders of the operating company, the latter being entirely independent from the owners of the hotel property. New hotels are now under construction in many cities where the patronage is far from established, and in these cases the lessee should not be expected to pay the owners more than 5% guaranteed rental for the first few years. If the promoters of a new hotel project cannot find an experienced lessee who is willing to assume this degree of responsibility, they had better postpone the project temporarily or until conditions warrant a satisfactory lease with a responsible hotel operator.

When an understanding as above outlined is arrived at, the procedure in carrying it out is usually as follows:

An operating company (entirely independent of the owners of the property but made up of the same stockholders) is formed for the purpose of furnishing and operating the new hotel, the funds for these aims being raised by stock subscription. The stock is usually divided equally, but in some cases the lessee's interests hold 51% and the owner's interests 49%.

The chief advantage in this form of lease lies in the fact that the lessee is better assured of the co-operation and patronage of the local business men, and that he and the owners, because they are business partners, are more apt to pull together in the effort to make the hotel successful. In my opinion this form of lease is the only proper one for cities of less than 50,000 population where the conditions do not warrant the first form of lease due to uncertain future business conditions.

A conspicuously successful illustration of the actual working out of a lease of this kind is furnished by the new George Washington Hotel of Washington, Pa. In this case the lessees offered to pay 7% of the total cost of the property but I advised the owners that in my opinion better and more satisfactory results would be obtained both for the lessee and the business men of the city if an operating company were formed on a 5% guaranteed rental, 7% as and when earned with the result that this form of lease was agreed upon. The hotel opened in February (a bad time of year) and in the course of 7 months all the preliminary expenses had been met, the guaranteed rental had been paid, and a substantial bank balance remains to the credit of the operating company.

#### *The Provisions of Lease "C"*

The third form of understanding between the owners and managers of a new hotel property cannot in reality be called a lease, but it is, nevertheless, a desirable form of agreement in cities where the new hotel's future appears so bright that there is little or no question as to its earning capacity. I refer to the plan whereby the hotel's owners themselves furnish it and employ a manager on a fixed salary to operate it. In this case, the manager's contract usually carries a clause to the effect that after the earnings have reached 7% or 8%, he shares in a certain percentage of the profits. In an arrangement of this kind the manager is often financially interested, with the result that he is more concerned about the hotel's success than would otherwise be the case.

I have frequently seen cases where, because of carelessly drawn leases, misunderstandings occurred as a result of the lessee's or owner's obligations not being clearly stated. The accompanying digest of an unusually thorough and carefully drawn lease gives the principal points that such an agreement should embrace—and it naturally goes without saying that once the terms have been settled, it is extremely important to see to it that they are all fully covered in the lease.

As I said above, the only sound and tangible basis on which a lease for a

(Continued on Page 271)

## Proposals

### NOTICE TO BIDDERS

Sealed Bids will be received by the Camden County Board of Chosen Freeholders for a group of buildings for the Camden County Tuberculosis Hospital.

Drawings and Specifications can be seen and all information obtained by application to the office of Arnold H. Moses, A. I. A. Architect, or Frank H. Schaefer, Consulting Mechanical Engineer, Temple Building, Camden, N. J.

Bids will be received on Tuesday, May 6th, 1924, at two o'clock P. M., Daylight Saving Time (three o'clock P. M., Standard Time).

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., April 16, 1924.—Sealed Proposals will be opened in this office at 3 P. M., May 14, 1924, for the construction of a one-story brick and tile non-fireproof Post Office building, approximately 61½ by 69 feet in size, at Woodbury, N. J. Drawings and specifications may be obtained from the Custodian of the site at Woodbury, N. J., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from Page 260)

new hotel of the kind we are here concerned with can be drawn up, is that of its total cost at the time of completion. Its anticipated earning capacity will in most cases affect the specific nature of the lease. But the first and foremost consideration the owners should keep in mind is the one that they are entitled to a fair return on their investment and that a well operated hotel will be a pride to them and to their city. They should further realize that the greater profit a lessee makes, the better will he manage their hotel, and because of this fact it should not be their policy to contend that as a result of their financing the undertaking they are entitled to a big return on their investment. This, after all, (if the hotel is properly operated) is due more to the business ability of the experienced hotel man they have chosen than to their efforts in building it.

## A Typical Financial Statement of a Hotel of from 250 to 300 Rooms

The following statement is more or less typical of those issued by landlord corporations—namely, companies which build hotels and lease them out to hotel operating companies. In most such cases the sole business of the landlord corporation is to receive the monthly rental and distribute it as mortgage interest amortization payments and dividends on the stock—the operating company paying all real estate taxes, fire insurance and upkeep.

These statistics are based on a total investment of \$1,000,000 which is raised by an issue of \$550,000 common stock, \$100,000 preferred stock and a 6% mortgage of \$450,000. As Column II shows, the operating company pays 7% rental on this investment for the first 10 years of its lease and 8% for the second 10 years. Note that before the end of the 20 years the common stock holders will be the sole owners of the property, the mortgage and preferred stock having been retired before then.

In connection with Column V, it should be understood that the per cent. earned on the common stock each year will be higher than the actual dividend declared, for the annual sum which is set aside for amortization purposes and income tax charges must be deducted before dividends can be declared.

Year:

	Total Annual Net Earnings— Rental:	Paid as Mort- gage Interest:	Paid as Dividend on Pfd. Stock:	Per cent Earned on Com. Stock:	Paid Yearly to Cancel Mortgage:
1st:	70,000	27,000	7,000	6.5	10,000
2nd:	70,000	26,400	7,000	6.7	11,500
3rd:	70,000	25,710	7,000	6.8	13,000
4th:	70,000	24,930	7,000	7.0	14,500
5th:	70,000	24,060	7,000	7.1	16,000
6th:	70,000	23,100	7,000	7.3	17,500

20th:	80,000	None	None	14.5	None

\*Refunded 15th year.

\*\*Retires Preferred Stock.

## A Digest of the Important Clauses in a Typical Hotel Lease

1. Complete description of property's location.
2. The lessors agree to construct a modern fireproof hotel building complete, with the approximate number of bed rooms stated, and further agree to submit the plans and

specifications and the contract for its erection to the lessees for their approval.

3. The lessees agree to furnish and fully equip the building as soon as delivered to them in a manner in keeping with the building itself, to maintain the furniture, fittings and equipment in good order, to renew the same as necessary and to pay a minimum stated total sum for the original purchase of the furniture and equipment.

4. At the termination of the lease, the lessees agree to turn the building over to the lessors in as good repair and condition as when delivered to them, fire and other casualty and ordinary wear and tear excepted. It is further agreed that the lessees keep the roof, exterior, walls, frame work, windows, entire interior and every part of the building in first-class repair and good condition during the term of the lease at their own expense.

5. The lessees are to pay all taxes, assessments and other charges of every kind which may be required of the lessors in connection with the operation of the property as a hotel, and also such other charges as are contingent to the ownership of the real estate and improvements, with the one exception that the lessees be not required to pay income or similar tax assessed against the lessors by reason of any income received by them.

It is further agreed that the lessees pay all lighting, water and heating charges incurred in the hotel's operation, and also all premiums on insurance policies that may be maintained on the property during the life of the lease by the lessors in such insurance companies as they may elect. It is further agreed that such insurance be placed in an amount not less than a stated sum.

6. The duration of the lease and the method of paying rent is next stated, and in connection with the percentage plan of basing the rental charge, it is made clear that in this figure be included the cost of the land, plus taxes, insurance, interest on borrowed money, brokerage and attorneys' fees incurred in the purchase of the land, other carrying charges and cost of the building, including architects' fees and interest charges on money borrowed up to the time of its completion.

It is further stated that payment of rental shall start at the time when the architect certifies to the building's being ready for occupancy by the lessees.

7. This a 30-day default clause, at the end of which period the lessors have the option of declaring the lease forfeited, ejecting the lessees, and also have recourse to remedies, hereinafter provided for, such as taking up the lien on the furniture. It is further agreed that should the lessors take possession of the premises by reason of default, this action does not relieve the lessee's liability for damages or breach of contract.

8. At the time of the execution of the lease, the lessees deliver a bond (the sum of which is stated) to the lessor as a guarantee of the faithful performance of their agreements, which bond must be passed on by the lessor's board of directors. The lessees' liability on this bond shall continue through the entire term of the lease and an assignment of the lease shall in no way discharge this obligation except when the assignees of the lease furnish a similar bond, which is accepted in the same way by the lessors' board of directors.

9. After the first five years of the lease have expired, the lessors may at their option require the lessees to withdraw their bond and substitute a chattel mortgage on the furniture and equipment, with the further provision that such furniture and equipment must be fully paid for and free of all incumbrances at the time of the execution of

the mortgage, which mortgage shall be kept as a first lien on the property.

10. This clause states that if the building should be rendered totally unfit for hotel use by fire or other casualty, the lessees shall not be required to pay rent during such period, it being further agreed that the lessors shall use as much of the insurance money as necessary to again place the building in proper operating condition. In the event of the building's being partially damaged by fire, it is understood that the lessees shall pay rent in proportion to the number of usable bedrooms until the balance have been repaired.

11. The lessees agree to conduct the premises as a hotel and to keep the property open during the full period of the lease; not to use it for any other purpose, with the exception that they may sublet the stores and other concessions. They further agree to manage the property in a proper and orderly manner and also to conduct the hotel under the name as stated in the lease.

12. The lessees agree to insure the furniture, fittings and equipment against loss or damage by fire to 75% of its value and that as soon as the chattel mortgage above referred to has been executed, this insurance shall be conditioned so that the loss, if any, shall be paid by the lessors as its interest may appear and that the insurance policies shall be delivered by the lessees to the lessors upon the execution of the chattel mortgage.

13. The lessors shall not be liable to make any improvements to the property or to repair the hotel during the term of the lease. The lessees shall at their own expense make all internal and external improvements and keep the building first class in every respect. It is further agreed that if the lessees fail to keep the premises in good repair and condition, the lessors are entitled to make such repairs and charge them to the lessees' account which charges, if not paid promptly, shall be classed as rent and thus made recoverable by the lessors in the same manner as if the lessees had defaulted in their rental payments.

14. The lessors have the right to inspect the premises and its furniture and equipment during reasonable hours, and if the furniture or equipment is not maintained in good repair, they may at their option have them repaired at the lessee's expense, as explained in the preceding clause.

15. The lessees shall pay all property taxes, rates, charges and assessments levied by properly constituted authority on the property in or pertinent to the building, and they shall also pay all license and business taxes which are assessable on the property in connection with its conduct as a hotel or other business operated therein by the lessees.

16. No material or structural alterations to the property shall be undertaken by the lessees without the lessors' consent, the extent of such alterations to be designated in writing, and with the further provision that such improvements, alterations or additions shall, when completed, become the property of the lessors and pass to them with the real estate upon the termination of the lease.

17. If, for any reason, the lessors are unable to build the hotel on the lot as described or on any other lot satisfactory to both parties, the indenture shall not be binding on either party.

18. The lessors shall use their best endeavors to push the hotel's construction to completion and deliver it to the lessees at as early a date as practicable.

I make it a rule never to write a grouchy letter—I telephone.

## GIVES DIRECTIONS FOR PLASTERING

A circular telling how plastering is done, and in many cases why it is done in a certain way, has recently been published by the Bureau of Standards. It is the result of a three years' study of the plastering industry, during which many experts on the different phases of the subject have been consulted.

The practical part of the paper gives directions for preparation of a masonry wall to receive plaster, specifications for lath, directions for erecting lath, specifications for the ingredients of plaster, and directions for their mixing and application.

The properties of plastering are discussed in detail, and conclusions drawn as to the best kind of plaster to be used for a given purpose. Some of the common defects are explained and their remedies suggested.

These directions are embodied in Circular 151 of the Bureau of Standards entitled "Wall Plaster: Its Ingredients, Preparation and Properties." Copies may be obtained from the Superintendent of Documents, Government Printing Office, Washington D. C. The price is 15 cents cash.

## WE ASK YOU

Isn't it funny?  
THAT A MAN WHO CONSIDERS  
HIMSELF A BUSINESS MAN  
Will get up in the morning  
From an advertised mattress,  
And put on advertised underwear,  
Advertised hose, shirt, collar, tie and shoes.  
Seat himself at a table and  
Eat advertised breakfast food,  
Drink advertised coffee or substitute,  
Put on an advertised hat,  
Light an advertised cigar,  
Go to his place of business and  
TURN DOWN ADVERTISING ON THE  
GROUND THAT ADVERTISING DOESN'T  
PAY!

Don't crowd your space, Mr. Advertiser  
Better play up one selling point at a time  
than to try to get everything into one ad.  
and kill every possible chance for display.  
An ad. should stand out. It should be easily  
read. It should draw the attention of the  
reader. A carload of detail can't be crowded  
into a few inches of space and still retain  
the quality of sticking out as all good advertising should.

The valuable man in any business is the man who can and will co-operate with other men. The foreman who opposes the introduction of a new man into an institution and fights every innovation which he himself does not suggest, is doomed to a gradual and creeping defeat. Men succeed only as they utilize the services and ideas of other men. Co-operate!

## **For Permanently Hard and Waterproof Concrete**

THE addition of "ANTI-HYDRO," a liquid integral compound, to the gauging water produces extremely hard and absolutely waterproof concrete all in **one operation.**

For waterproofing concrete cellars, walls, foundations, pits, stucco, mortar, etc., "ANTI-HYDRO" has no equal. It is easy and economical to use—simply mix it with the gauging water.

For 20 years "ANTI-HYDRO" has given complete satisfaction on every type of concrete hardening and waterproofing work.

## ARMSTRONG'S CORK TILE FLOORING

PROVIDES COMFORT, QUIETNESS  
DISTINCTIVE APPEARANCE

This member of the Armstrong family of floor coverings is a true cork product, being clean cork shavings, compressed into moulds and baked.

It possesses ten distinctive features:

Resilient and comfortable	Sanitary
Quiet underfoot	Remarkably durable in service
Non-slippery	Easy to clean
Warm to the touch	Economical
Attractive appearance	Slow-burning and fire-retarding

We are direct factory distributors for Armstrong Cork Products—flooring and insulation. Write or phone us for complete details regarding your requirements.

## As The Editor Sees It

F. H. Joyner, for many years Highway Engineer of Massachusetts, and later Chief Engineer for the Los Angeles County Highway Commission, was called in by Arizona to study and advise upon its great road building program. I condense from his report: "Whether it is best for a State to do its work with State owned equipment and State employed superintendents and laborers, is a question which in its broadest significance extends into the very foundations of our government. But considering only its economical aspects, a few facts stand out clearly. The average man expects an easy job when working for the State. It takes months under good supervision before he can be made to give the State the same service he would have given the contractor on the first day. Politics in some form is ever present in public work, and many men are employed not because of fitness but because of hidden pressure which cannot be denied. It is almost certain that day labor work will exceed the contractor's price by more than his profit and furthermore there is always present the danger that the engineer will close his eyes to defects in his own work which he would never permit from a contractor. There are examples of that sort in your Arizona roads today. From many years of direct supervision of public work I feel that public bodies face *certain fundamental handicaps* that make it practically impossible for them to compete with the

contractor in either cost or quality and I unqualifiedly recommend to you contract work."

The Los Angeles County Board of Supervisors.

After much experience under honest administration and conditions more favorable than the average, has disapproved the day labor method of doing public work and the chairman of the Board recently wrote

"Our policy is to let all of our important work by contract wherever it is possible to prepare plans for bidders. We believe it is the sound and economical way to handle construction because it definitely fixes the obligations and responsibilities of the owner. If the work is let to responsible and experienced bidders backed by surety bonds the interests of the owners and the taxpayers are fully and definitely protected. We do not believe it is economical to handle large works by day labor because of the impossibility of getting the same efficiency the contractor does out of his trained organization and his specialized equipment."

Louis C. Hill, the widely known Reclamation Engineer, who built the Roosevelt and other great dams writes: "We generally follow the policy of recommending to our clients that work be done by some contracting firm. Any first-class experienced contractor should be able to do the work for a price, including his profit, less than it can be done by

force account, provided all the proper charges are made against the job in the latter case."

Now these important testimonials gathered only from my own limited experience are the expression of a situation which has been demonstrated over and over again. Day Labor work never has and never will develop the full efficiency close economy which are the very heart of every successful contractor's history. And moreover I make the assertion, not carelessly, that competent examination of even the most conspicuous examples of apparently successful day labor undertakings in this country, would probably reveal not only an unnecessary cost but the further fact that the engineers did not hold themselves to the methods or standards they would have demanded of the contractor. On a certain well known important construction, my own firm was specifically instructed by the Chief Engineer that our bid must be based upon aggregates obtained by opening up a remote quarry and crushing both rock and sand, because the aggregates along the job were not suitable. But when he decided to do the job himself he used the forbidden material exclusively and on completion announced in public print a saving which as a matter of fact was much less than the amount we had added for the quarrying and hauling. His answer to me was "well I could safely do things that I could never permit under

a contract." The maintenance gang that has been kept upon that particular piece of work ever since, is another story.

I also emphatically deny the soundness of the familiar argument for day labor, that it removes the incentive for slighting and insures better quality of work and assert from my observations that just the opposite is true. We contractors in all lines of construction are constantly held up to the details of meticulous standards and specifications which no engineer or architect imposes upon himself. The engineer has no higher authority to criticize his own work. This is not a proper basis for public construction.

Neither will the public mind concede much favor to the other chief argument, that day labor permits the engineer to enter upon the work without the necessity of first fully preparing his plans. Great emergencies may occasionally justify such procedure, but as a method it is improper and unsound and leads to careless estimates and increased costs. It would be as proper to allow a contractor to plant the job one tool at a time as his need arose at it is for an engineer to enter upon it before he has made the fullest possible study and worked his plans out to completion.

But the fundamental and glaring unsoundness in the day labor method of expending public funds lies in the utter lack of responsibility back of the estimates and hopes of the officials in charge. It seems axiomatic that the taxpayer is entitled to assurance as to the ultimate cost of public work. The best of intentions and the most honest efforts on the part of officials are a poor substitute for guaranteed costs, and financial responsibility. The taxpayers of the country would not knowingly put this option into the hands of the evershifting stream of politicians who pass through our public offices.

Recently a large irrigation district dam was financed by a bond issue, and the trustees, persuaded by their engineer that he could "save them the contractor's profit," turned the construction over to him on a percentage basis. But when they went into the market with their bonds, the underwriters refused the issue until the district had rescinded its deal with the engineer and had left the work to an experienced contractor whose firm offer was backed by a surety bond.

Within three months the State Bond Commission of California has gone on record as looking with disfavor upon the application of irrigation districts for bond issues, when they contemplate spending the revenue of such issues in day labor construction. Why? Why because it is manifestly unsound economics to create a public loan for which the security or collateral is not definitely set up. When a bond issue is expended on day

labor construction, the purchasers of the bonds have no assurance whatever that the money they are providing will create the promised collateral and our history is notorious with wrecks in proof of this.

Furthermore, when public works are built by day labor the taxpayer very rarely knows the actual cost. Such statements as are made in public demand are seldom a true picture. Overhead is not fully charged. Equipment is shifted from other departments without charge. Automobiles are used without charge. Equipment is credited at the close of the job at a price above its actual salvage value. Repairs of equipment are charged elsewhere. Telephones, telegrams, trips, postage, automobile supplies, general office work, depreciation are omitted or charged to general accounts. If public officials really do make savings in construction work why are they not eager to publish full reports which will stand the test of expert auditing? Why is it so universally difficult to dig out the real costs of such work from your city hall or your state capitol? Why do public officials always resist the adoption of state laws which would bring their construction costs fairly into public contrast with contractor's bids? It was only after years of struggle and defeat that in California we finally secured quite recently the adoption of a law which requires public officials to file upon completion sworn statements of their day labor construction costs and to include therein repairs, insurance, transportation, rentals, depreciation, and all other costs entering into the work. Also to set forth the original estimate of cost, together with the bids, if any were taken, and a list of the publicly owned equipment used on the work and any changes in the original plans and specifications. Why was this wise, wholesome bill strenuously resisted? Isn't it certain that any public official, who really effected savings by his construction department, would eagerly welcome publicity therefore? Yet quite generally they oppose all efforts to check their costs—costs which are nearly always hopelessly buried in books of general accounts.

May I digress a moment to illustrate what we mean when we talk about the value to the public of responsibility? A few years ago a middle west city voted a bond issue of about three million for a new water supply, and after some opposition from day labor advocates, let the work to six different contractors. The entire work was efficiently put through without default or delay, and within the money, but everyone of the contractors lost heavily. The work actually cost three and a quarter millions. Was the contractor in this case a liability, or was his guaranteed cost an asset of vital importance to that community?
